Anyone with ignition noise they can't get rid of MUST get a
set of "Magnecore" wires they are FAR better than any I have tried
and have cured problems for lots of other people.

look here...

> restriction on gaining a Type Acceptance for a new 6m amps.

Not totally wrong. The FCC will not grant a type acceptance to a 6M if
can be modified easily to operate on 11M. Now if Command Technologies
now has an accepted 6M amp they can sell it without a problem. The only
thing that was really wrong with KC5NG's comments was he seemed to infer
that ALL 6M can be easily modified.

Yes, there are restrcitions on gaining a type acceptance for a 6M amp.
And if amp is not designed within those restrictions, it will not be
accepted.

> > Amateur radio operator KC5NG, Extra Class, VE (ARRL/W5YI)

> What a (bad) joke. You should know how to read section 97.317 which
> restricts the permitted gain of HF Amplifiers only between 24Mhz and
> 35MHz and not between 50MHz and 54MHz.

And YOU should take a look at 97.315 which puts type acceptance
requirements on all amps that operate below 144 MHz.

2289. FT-5200 Setting Deviation ?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-10 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ricochet.net>
Message-ID: <32861C88.56D4@ricochet.net>
Source record: 191044

My nearly 5 year old FT-5200 seems to have become rather quiet. It's deviation appears to be limiting at about 2.2 KHz.

I haven't opened the thing since I did some mods to it not to long after I bought it. Now I can't find my schematic.

Does anyone know where the deviation adjustment is in that radio? There are not too many thing to adjust inside besides the front end coils.

I am not a regular at r.r.a.equipment so I would appreciate at least a "cc" by e-mail on any response.

Regards

Hello Everybody,
I am interested in buying a 10 meter HT. I have seen a few at a
local Hamfest a couple years ago and decided not to buy them, which
was a mistake.
If you, or somebody you know, has a 10 meter HT for sale for a
reasonable price, please e-mail me! I would appreciate it.

Allen,

I've only been working HF for a couple of years and the only other rig
I've used prior to my 706 was an oldie. From that stand point, I love
my IC-706. For the $$ you can't beat it. I've always received great
reports on my QSO's and it travels with me on my motorcycle. There
are two things that it doesn't do that I wish it would... Receive two
bands at once, so that I could monitor 2 Meters when working HF, and
work a split between bands allowing me to receive on one band and
transmit on another (useful when working satellites). The few
complaints I heard on audio don't hold true. I believe you'll enjoy
the radio. 73's

>73, Bill W7TI (ex-W7LZP)
>wrt@eskimo.com

I use a fishing pole with a spinning reel for this - a common 1 to 2
oz "sinker" takes it pretty far. You actually have a little control as
to controlling distance, which you don't have with the other methods.
For instance, as soon as my sinker clears the top of the tree, I can
"brake" it a bit to slow it so it doesn't also go over neighboring
trees.

I reel the monofilament line "in" to pull a rope all the way back to
me from the other side of the tree, then disconnect the monofilament
and attach that rope on my side of the tree to the end of the
antenna's support and haul the antenna up from the other side with
that rope.

Incidentally, if you miss with the first cast, just cut the sinker off
and retrieve the monofilament line easily without any snag anywhere.

One time, I borrowed my son's bow and arrow outfit to try that method,
and accidentally imbedded one of his expensive arrows high in my pine
tree! Fortunately, it fell out by itself a couple weeks later.

2295. Ten-Tec Omni-6 Problem/RF feedback

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-10 00:00:00 UTC
From: DAN <AD4HW@citrus.infi.net>
Message-ID: <328668C1.3D34@citrus.infi.net>
Source record: 191050

Hi OM's

I'm having a problem with my Omni-6. I'm getting RF feedback through my audio circuit. It's not a problem with the lower frequencies (80 or 40), but it is a problem on 15, and when I use my linear on 15, it's terrible. I've tried different microphones, and the Ten-Tec amplified mike works the best (but it's still very bad). Also, I have a good low inductance ground that everything is tied to. I've also tried two different antenna's, a centerfed longwire, and an R5 vertical. Both antenna's produce the same result. If I connect a dummy load, the problem goes away. Also, if I use my Kenwood TS-850 instead of the Omni, there is no problem.

I've examined the audio board schematic for the Omni-6. It has the typical bypass caps, but it doesn't use any negative feedback in the first audio stage. I'm thinking of making a simple mod to add some negative feedback (I modeled the circuit via SPICE, and the mod should help quite a bit).

Before I start cutting traces and melting solder, I thought I'd ask if any of the other Omni-6 users have had similar problems. If so, please let me know if you were able to resolve the problem.

Thanks & 73,
Dan

I Have one Zetron Model 810 Digital Hybrid for sale. This is a 2-Wire to 4-wire converter with digital signal processing. It typically is used to connect a standard telephone line to a mobile radio system. It will enhance the audio (especially full-duplex) in trunking, conventional and cellular radio systems.

This unit is in excellent condition. It was in-service for less than a year.

Rack-mount (about 2" high). With Instructions.

Originally purchased for $900. Will sell for $600 OR BEST OFFER.

I have a Trident TR-2400 (by ACE Communications) hand-held Wide-Range Scannerfor sale.

This unit is in BRAND NEW CONDITION (This radio was babied - brand-new inside and out).

All instructions included. Covers 100KHz to 2,060MHz (Including all Cellular freqs)!! ALL MODES! (AM, NFM, WFM, CW, SSB). 1,000 Channel Memory. Attenuator switch.

I paid over $500 for it about 2 years ago. Never used outside. -- BEST OFFER.

>(yes, I have the reciprocal license). However, rather than constantly
>re-charge the NiCad on 220v with a transformer, I've elected to take
>an AA battery back with me. I can get a much better deal on "heavy-
>duty" (non-alkaline) batteries -- but would 3 watt transmitting eat
>them up very rapidly? Is it better to spend more for alkalines?
>Batteries are expensive where I'm going so I want to take alone a
>2 week supply. As far brand names, any preferences? Duracell better
>than Energizers? Third party brands?
>Much appreciate any advice.

I have never used alkaline batteries on my trips to France. However,
depending on the amount of transmitting you plan to do, it might be
wiser just to take a few battery packs and charge one while using the
other.

Cross-posted to: alt.forsale,sci.electronics.components,misc.industry.electronics.marketplace,,rec.radio.amateur.equipment,sci.electronics.repair,sci.electronics.equipment,us.forsale.misc

I have TWO Zetron Model 50 DID Telephone Trunk Converters for sale.

These both are in BRAND NEW CONDITION. They were in use for less than a year.

A DID (direct inward dial) line allows each mobile radio or pager to be reached at a unique, seven-digit telephone number, just as in cellular service. A caller doesn't have to overdial extra codes in order to reach a radio or pager.

They were designed to be used with a Zetron Model 45B (Z-Patch), 46 (Trunked Interconnect) or Model 48B (Repeater Manager) but will work with ANY DID installation.

Rack-mount. All manuals included.

This allows each subscriber to have his own unique telephone number!

Original price was $1,000 each. Willing to sell for $1200 for both or $700 each.

: Email: dm@millennium.co.nz

I don't own either of these, but it seems like an apples/oranges
comparison. The TH-79 has two receiver sections so it can receive
two frequencies simultaneously (either both on the same band or
two separate bands). The FT-50 has only one receiver, even though
it has modes to monitor two frequencies by switching back and forth.

If true dual band receive is not a concern for you, then I would
think the FT-50 has the advantage.

I've been talking to an ICOM America outside sales representative and
she said that the IC-756 will be available in the US around the end of
Dec or early Jan. They are waiting for FCC approval which is
guaranteed since (she claimed) the radio exceeds all FCC standards.
It's just a matter of the FCC getting around to it....

Richard,

I built the Ten-Tec 1208 6 m xvrtr over a year ago. It is a very good. I have tried a couple of other 6 meter transverter kits, but the Ten-Tec RX is by far the best of all of them.

Mechnically, the kit is well designed. You won't go wrong with that one.

Hope to hear you up here in CN89 in the Spring.

Don't get too narrow focused on it being iginition noise.

> > Only apparent in 2nd and 3rd gear, on
> > acceleration. Dissappears when you let off the gas.

Electronic Fuel Injection?

Electronic transmission?

Anti-lock brake System?

Does it have an electronic suspension system?

All this and more are computer controlled and could be a source of
noise.

There is also an issue of Ford exhaust systems (someone mentioned that
earlier). This was apparently a real problem on Explorers for some
people. But I have heard it blamed for noise in other Fords as well.
Did they check with the dealer? They apparently have a "fix" for the
Explorer. Perhaps help is available there.

For sale:

Military transceiver, type R159, 30 to 70 MHz in 1 kHz, narrow-band FM,
with ALL accessoires

Transceiver is of very recent design (late 80s) , in use today with the
Russian forces as the standard man-pack field radio

Radio is very compact and rugged, for use as back pack radio or vehicle
radio. It is NOT a boat-anchor, it is too recent and too light for that.

Some specs:
- RF power: 20 watt
- Narrow-band FM
- Supply voltage: 12V DC from Nicad (3 of these 12V NiCad packs included,
never used)
- Antenna: Wire antenna or whip (included)
- Microphone/headset included
- Transceiver has built-in automatic antenna tuner
- Manuals included

This transceiver is NEVER USED. Is packaged brand-new in its original
wooden crate, with all accessoires.

Sell for $600 , shipping not included

I put up a DX-77 about six months ago. At best, it is just okay. At
first I just couldn't get the VSWR to adjust on several bands. Hy-Gain
told me that they had a quality problem with one of their suppliers and
some of their traps weren't as they should be. (I assume they don't test
their products before they ship) They sent me a couple of new traps, and
still, it wouldn't tune. I called HyGain again, and they agreed to send
me a new antenna (they paid the shipping to ship the new one and return
the defective one). I assembled it and still had one band that wouldn't
tune, so I took the trap from the original antenna for that band and
swapped it with the new trap, and then the VSWR tuned okay. I never have
been able to get the VSWR down to <1.6:1 on 40M. I don't see the 2:1
VSWR bandwidth HyGain advertises.
I have my antenna mounted at about 15feet, on a storage shed, using a
metal triangular 18" mount, the mount is grounded directly to ground. I
get out on all the bands, but not as well as I had hoped to. I am
hoping to get a tower and yagi up in the future.
Good luck de Sam, AB4N

>advance.
>

There are two small loops of wire on the circit board. I think one is pink, and the other black, one opens up 440 rec, and the other opens up 2 meter xmit. Cut both wires, and perform a reset via the manual.

Its a very simple mod. Almost all of alincos new gear has these jumpers.

2336. FS: Ten Tec HF Station

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-11 00:00:00 UTC
From: kleerdex@epix.net
Message-ID: <567qg1$1rj@news1.epix.net>
Source record: 190928

I have decided to sell my "backup" rig to make some room in
the shack. This is a super-clean, mint condition, complete
matching station in the classic cream/woodgrain cases that
made Ten-Tec famous for its cabinetry. All has been stored
covered up and works fine. This rig is a dream on CW and I
worked DXCC on SSB as well with it.

o Ten-Tec Triton I, 80/40/20/15/10 HF SSB/CW all solid-state
with built-in SWR meter, QSK keying, offset tuning, auto
SSB mode select, optional CW filter installed, xtal
calibrator, 50w output

o Matching Ten-Tec 110vac/12vdc power supply with factory OVP
board installed

o Matching (MFJ) antenna tuner with built-in balun

o Matching (homebrew) VOX and Speech Processor box

o Shure 444 desk microphone

Asking $440 for the entire package.

From: n4lq@iglou.com
Message-ID: <E0poDq.JDC@iglou.com>
Source record: 190931

I'm working on a TS-120 which has a dead carrier oscillator. This is the small board with the 9mhz osc on it. All voltages check fairly close and nothing is visibily wrong. It just won't oscillate. I know this is the problem because I checked for output with both the scope and freq counter plus injected 9mhz with my signal generator and brought the rig to life.

Has anyone had this experience. I've checked all diodes and transistors using the ohmmeter. I realize transistors can stop oscillating but rather than beginning a total parts swapout, I though I'de ask on here first. Any ideas?

From: mays@indigo
Message-ID: <568con$k9s@mark.ucdavis.edu>
Source record: 190932

Hello
There is/was an attempt to start mfg of the 400X down in So. CA, but at last word there were some serious problems with the design/production/mfgr. I saw what was to be a 400X or similar at Ham-Con in LA with Herb behind the table. It was a lit-up-demo with digital display, but when I spun the dial, the display stayed in the same place (dummy radio). My friend the Late AA6GM, Alan McCarthy had a factory deposit on one for over a year before he requested it back. The delivery date kept getting pushed back, etc. So be real careful when sending money into a new deal/advertisement, use a credit card for protection (fraud condom).

Maybe the show will get on the road for Atlas again, someday.
Some of my story may be alittle off, so do your own homework and let us know.

2347. ALINCO DEAL: THE TRUTH

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-11 00:00:00 UTC
From: kc6ttr@ix.netcom.com
Message-ID: <847667907.31523@dejanews.com>
Source record: 190976
Cross-posted to: rec.radio.swap,rec.radio.amateur,rec.radio.amateur.swap,rec.radio.amateur.equipment

Greetings,
I felt compelled to make the truth known about this Alinco radio "deal" that has been causing some controversy on the newsgroups. This is ALL off the record and I will not respond to any E-mail regarding this matter. The purpose of making the following information public is to serve my fellow amateurs and to put this issue to rest once and for all.
Some radios were sold to a group of individuals who were to export these units to Europe or Mexico. Some of the radios are new in the box, some are not. All the radios were discontinued models from the early 90's. After hearing rumors of the radios possibly making their way back into the country (even after being reasured by the buyers that this would not happen) it was decided to remove the serial numbers and make a list of the the radios incase any did in fact make it back into the States and where in need of service. These units would not be serviced. Well, as you can see, there has been numerous offers to sell these radios on these newsgroups and other forums. Personally, it's very upsetting to see an opportunity to promote amateur radio to some less fortunate countries turn into a money making oportunity for some "sad" individuals who can't even keep their word. The facts are these radios were not to be sold in the US...it's sounds like they are. These individuals lied to Alinco and who knows what they will say or do to sell these units. It is my hope as a true amateur radio operator that anysolicitation to sell these radios on these newsgroups or any other forum in the United States be boycoted by ALL amateurs and non-amateurs alike.
These individuals cannot be trusted and they should not be rewarded for their misdeeds to the amateur community. I hope this has giving enough of you the information you need and I truely hope this matter will be put to rest. Thank you for your time to read this.

Respectively submitted,
Scott Booth, KC6TTR / Alinco USA

From: dddavis@atl.mindspring.com
Message-ID: <5669gj$9jm@camel1.mindspring.com>
Source record: 190979

My opinion: The FT-50 is a very nice radio, and obviously very popular. The HT I would keep if it were my last is the FT-51, though. The alpha capabilities, dual receive, and intermod rejection put it above the FT-50 for my needs. I do own both, though, and I might feel differently if wide receive range very important to me.

I think you couldn't go very wrong with either the FT-50 or the FT-51. I have never heard of an FT-51 owner who did not like it.

> > > into being.

> > Just about everything in the above post is totally wrong.

> Not totally wrong.

Yes, I did exaggerate somewhat. However the entire point of his
posting was to say that say that Ten-Tec legitimately took their
curious position on account of the fact that FCC Type Acceptance was
simply not available for new 6m amplifiers and that all amplifiers
now on the market were grandfathered. And he also mis-stated that
grandfathering required only that the amplifier was in production
prior to the waiver date (which BTW is April 28, 1978). The fact is
that there was no grandfathering of 1978 designs, only completely
manufactured and finished amplifiers were eligible for waiver.
There was grandfathering of designs in the Technical Standards rules
on spurious emissions in S97.307, but none in S97.315 which is the
section which covers Type Acceptance of RF Amplifiers.

> Yes, there are restrcitions on gaining a type acceptance for a 6M amp.
> And if amp is not designed within those restrictions, it will not be
> accepted.

To say that complying with the rules of Type Acceptance is a
restriction on gaining Type Acceptance is a curious use of language.
So maybe learning to drive is a `restriction' on getting a pass in an
auto drivers exam?

These regulations are laid out in very simple (probably 8th Grade?)
English in Part 97.317, and I'll be pleased to email them to anyone
interested. Maybe someone at Ten-Tec will take me up on the offer :-)

Try a wrist slingshot--you can buy one at WalMart. While you're there,
buy a cheapo Zebco 202 reel and a couple of small hose clamps. Clamp the
reel to one side of the frame of the wrist slingshot, then use a 1/2 oz.
or so sinker. Very easy to aim! Good luck....

2356. Ameritron AL-80 capacitance

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-11 00:00:00 UTC
From: ga19989@evax01.d51.lilly.com
Message-ID: <1996Nov11.091818.1@evax01.d51.lilly.com>
Source record: 190985

I just purchased an Ameritron AL-80 (single 3-500) amplifier.,

Notice that I run out of LOAD capicitor on 160/80/40 meters... cranked all the way and still not enough capacitance. Worst on BOTTOM of the band. Load is 1:1.

The amp has 1100 pf variable in the output circuit, with 200 pf switched in on 40 meters, another 500 switched in on 80, and 2300 more added on 160.
All three of these bands are marginal. The capacitors all test out OK.

Has anybody else seen this in their AL-80? There's room to add one more doorknob capacitor, so I plan to drop in maybe 500 pf to play on all three bands. Can delete the 200 pf if necessary.

One more thing... when I checked the capacitors, I notided that the 200 ad 500 pf capacitors were reversed (i.e. the 500 comes in on 40, the 200 on 80). Switching them back to agree with the schematic did not help the situation, but it looks as if previous owner had the same problem.

Thanks

An alternative to the fishing reel connected to the slingshot is to get one of those spool type cannisters bow hunters use. Line spins out easily and neatly. A more expensive proposition though.

73 and good luck.

I use a simple wrist slingshot (<$10), 20# monofilament and a 2oz sinker.
I lay out monofilament back and forth on ground (perpendicular to
direction of tree) and shoot in opposite direction from which I want to
pull my main line. After shooting the monofilament I tie a 1/16"
nylon ahead of the sinker and wrap with electrical tape. The I pull the
1/16" nylon over with the monofilament and attach the main rope to the 1/16"
nylon, tape, and draw it back. Spare sinkers are useful in case of goof.

You can buy from J.M.L. Electronics, a RIT control which replaces your
normal RIT. This is a push-pull control which allows you to to activate
the RIT in transmit or receive mode.

This RIT, is part of the "Chipswitch Kit" but you can buy the RIT control
separetly for $19.95. you can reach them at 416-756-2383

How do you damage the reputation of a Lawer??????????????????????

The only difference I know between a Lawyer, Politician & a Crook is:

1. A politician is Lawyer, who is usually a Crook, who must be elected
to screw the public...

2. A Lawyer is a Crook who knows how the system is used to screw anyone...

3. A crook is a person who hasn't figured out how to become a lawyer or
politician - YET.....!

Why assume foreigners are brain damaged? Is it because a lot of
Americans feel the need to shout when talking to us :-)

> A.E.S. = Amateur Electronic Supply (U.S. company)
> The 800 number is obviously NOT accessible from Norway!

Only the first was obvious to me, the second was not. The call will
not be free, but it certainly may be accessible. It is from very
many countries.

> Kjell: it would be best for you to search European sources for
> new tubes. 8875s are not easy to find.

Best only for the European dealers, I'm sure! Mail order from the
States is often (always?) the best, sometimes the only source for
such components. And why do you say that these tubes are hard to find
immediately after correctly quoting Ken as writing that AES carries
them as stock items?

I am sure that Anthony means well. However Ken's posting appeared to
me to be very helpful and fully responsive to LA7AH's request. I
would assume that only sources below $499 (WOW) could top it.

>and neatly. A more expensive proposition though.

Suspect this has been covered, sorry for any repetition. But the cheap
and easy solution is to drill out the handle of the wrist rocket, put
a threaded rod through that, through a short length of dowel, and clamp
the Zebco reel onto the dowel with two hose clamps. Then the reel is inline
(actually at 2 o'clock). This has worked extremely well for me.

>>>
>>> Comments would be much appreciated.
>>>
I own 2 of these rigs, and they have both been major pains. First symptom of trouble is in the LED frequency display: too many segments lighting, too few segments lighting, and eventually *no* segments lighting. Somewhere in this process, the PLL circuit begins to fail as well. At first the frequency will only go in one direction no matter which way the dial is turned. Then, I lose the 144-146 segment. After that, the frequency display is dead and the only way to determine the frequency is with an external counter.

Each of these rigs has been back to ICOM or ICOM specialists more than 5 times. The usual fix has been to resolder the circuit board feedthroughs leading to the LED display. It never lasts more than 2 or 3 months, though.

I love these rigs when they're operational, but they have been nothing but trouble.

ProSearch is (or was, kinda) a subsidiary of Mosley Antennas (St Louis
MO). The kits were marketed by the onwer of Mosley, Gary Wurdak
(sp.), K0VUW. I'm not sure if Gary's still selling the ProSearch
line, of of someone else may have taken it over... I've not seen that
line advertised for several years now. It WAS a pretty good product,
and even offered voice readout for visually handicapped users.

Tom,

The AEA FAX III just needs an HF RX and a computer. It works fairly well for the simple circuit (it is merely a threshold detector), but given good band conditions, you can get great ictures. Try around 9090 KHz for a good signal or check around for one of the East Cost marine WEFAX stations.

Some of them retransmit satellite pictures with a pretty good result. Good luck trying to keep your computer and monitor from generating too much RFI!

Hello ALL

I am interested in getting some info as to what Data Radio to buy. My local BBS wants to go 9600, they already have the kpc9612 and are seeking a suitable radio.

They have a tekk1000l in mind but I understand that there are possibly better alternatives. They would prefer something with MORE than 5 watt output.

If anyone has info about either a commercial radio or what radio can be modified to work at an acceptable level on 9600....

Thanks..Pete..vk2yx

>73, Komkit N3XLW

The 706 looks like a very nice radio, and I am not knocking it, but it is considerably more then twice what I am paying for the TS-60. Yes, I am getting it used. Personally, I like monoband rigs in an era of multi-band, wide frequency, pack all the spectrum you can fit into one radio gear. I don't have a problem with that rational either, it is just a personal choice for me liking monobanders. I hope the manufacturers continue to make both kinds, but I think given the continued popularity of the multi's, the monobander will some day go the way of the dinosaur. I know the multiband gear represents a good value for the consumer.

Anyway I'm glad you are happy with your 706 and I wish you the best of luck with it. Maybe some day soon I can work you on 6 with my TS-60.

73...

Mike, N2QAC.

Howdy Dan --

I don't know for sure about the Omni VI but I've had a Paragon with
similar problems and I'll tell you what worked there.

First course though with ANY TenTec product new or used is to call
customer support at TenTec. They are absolutely great and may have a
mod that they've worked out for your rig.

What worked for me was TWO things. First they sent me a small ferrite
bead that slipped over the mic lead right inside the connector. I
suspect that this did not do much but I don't know for sure. What
solved the problem for me was putting a ferrite choke on the 12V power
lead into the rig. It's interesting that this solved the problem for
me and I never gave it another thought until about a week after I sold
the rig and the new owner called with the same complaint. I
suggested ferrite on the power line and never heard from him again so
I assume it did the trick. Good luck and enjoy it.

Tekk radios' may be purchased thru Paccomm [the TNC Company]....
They can be found on the WEB at:> www.paccomm.com
That is not a misprint on the address or company name...
They can be located by phone in Tampa, Florida, USA NOAM....
The information number is: 1-813-555-1212 here in the states an they
can give you their full Landline number; if you dont get it off the
paccomm web site....? Hope this helps...

If you need anything else, just e-mail me....

->Joe K7CJ

True. If you've got a "hi-power" ht, you are out of luck. The AA series
will put out half an amp or so, but poo out pretty fast above that level.
But my original post still stands. For most "normal" ht work, they are
just fine.

I have an Icon discone antenna which I will part with for $20. It is fully assembled and has not spent much time on the roof. It does have N-connectors.

Since it's assembled, you have to come and pick it up in the near north Chicago suburbs. If you'll do that, I'll throw in a Tandy 100 notebook computer with books and cassette recorder.

Please send me private e-mail if you're interested.

>line over the tree and then pull up that corner of the loop. Has anyone
>done this..what kind of line did you use?

Use a light gauge nylon cord (buy it at the home improvement store, looks like thick string) for the part that will remain permanently.

Experiment with 2-oz and 3-oz fishing weights, launching them over the tops of trees with heavy monafilament. Once that's done, use the monafilament to pull the insulator (with your wire inserted) into place.

The formula 1005/f which we use to estimate the length of wire gives you too much wire. This is good, because it is easier to tune from this direction, but you need to make sure at least one corner of your loop can be drawn in by a significant amount to allow yourself this flexibility.

At the design frequency, around 30' above real earth, the impedance of the antenna is around 75 to 100 ohms, so if you want to optimize the loop at the design frequency you can feed it directly with 50 ohm coax, but if you want to optimize it for the multiples also, feed with ladder line from a balun or tuner, it will still work well at the design frequency, just not as good a match. Since this is a full-wave antenna, you get resonance at the even multiples as well as the odd ones.

Best of luck and 73

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Anyone have a mod to enable general coverage transmit on the TS-870S?

No, I don't plan to use it on CB! I want to use it as an RF signal
generator. I've done this with past Kenwoods (TS-430, 440, 850).

It's easy. Connect a dummy load, crank the RF Output and Carrier pots
all the way down, select AM mode, and dial up your desired frequency.
Voila... a nice stable carrier on the desired frequency, with 10 Hz
readout! Need modulation? Add some (but keep the gain real low).

So... any help on this?

>
>If anyone has info about either a commercial radio or what radio can
>be modified to work at an acceptable level on 9600....

I *highly* recomend the TEKK radios for 9600 baud. I use the KS900.
If you need more power, it is simple to add an external amplifier.
Use one which is diode switched and which allows external TR keying.
I use a surplus 50 watt Motorola amp intended for in car use with
their HTs, but most of the amateur market HT amplifiers will work
as well. Just strap PTT from the TNC to *both* the radio and the
amp. Works great, costs little. Do *not* depend on RF sense switching,
too slow.

The only real negative to the TEKK radios is the receiver. They
are not robust in the presence of strong signals from other services.
So if you intend to use one on a commercial site, you'll need a good
set of cavities. They work fine in the typical home station environment,
however.

As alternatives, you can convert Motorola Micors and Mitreks to
9600 baud service. They're much better on commercial sites, and
of course run more power too. This isn't quite the plug-n-play
of the TEKK, but if you're comfortable converting Motorola
equipment to amateur operation, it is a good option.

> 1-800 US numbers certainly aren't usable from the UK.

Your certainty is present solely on account of your total ignorance
in this matter. Please try it out and then feel free to return and
tell us all which of the two of us was wrong.

You will need to add the 00 international access code and you keep
the `1' as it is also needed as the USA country code. Before
connection you will hear a warning that the call will not be free, so
you can try it out and then hang up quickly before the connection
proceeds and without being charged for the experiment.

Please get back here soon with your findings.

> sliced from time to time....

You said it. But did you really feel it?

n0xes@diamond.jcn1.com says...
>
>any mods for the alinco dr150 post or email n0xes@diamond.jcn1.com

First, write down all your memeory entries 'cause you'll need to reset the
CPU losing all of them. Open the top cover and on the left are a red wire
and a blue wire. Naturally, remove all power to the radio. Cut both of
the wires making sure they can't short anything on the board or contact
each other. I just used some heat shrink tubing. Now you have to reset
the CPU by holding the Function key will turning on the power. Radio
now transmits from about 138 to 174 Mhz and UHF band receive is 430
to 512 Mhz. These are approximate numbers as I haven't yet been to
both band edges. Enjoy the mod and glad I could help .

Hello,
I am trying to identify some older PC cards which have come
into my posssesion. I believe they are network cards. Here are some
particularabout them:

- identifiers '108NIC', '88NIC', and '92-003904-00' on PCB
- ISA cards
- 2, 8-pin dip switches , and one red and one green LED on back
- 9 pin DB connector with some sort of convertor attachment to a BNC
connector on back also
- a 80188, some sort of Zilog serial controller (Z0853008PSC), a
couple eproms, and other assorted logic on board

If you can identify them, I would appreciate being enlightened.
Thanks in advance!

> Help!
>
> N1YCH

On units with the MH-39 mike, you have to press the button on the upper right to switch bands for either vol or squelch. Hold down a bout 1-2 sec for squelch, instant for vol. The LED will flash for squelch (continuous for vol) on either L or R to indicate which band the control is currently controlling.

A bit confusing...

I am not sure (I dont think so) but who cares because you can always go
back just by changing BAND to A1 and you are back to normal
The hardware modification facilitates the software mod.

Enjoy!!

I just got a new IC-706. Everything worgs OK but the HF audio quality. (VHF audio is excellent)

The reports I get is: Very strong signal but very low modulation! (with or without compression)

I can not make out what is wrong. I tried mic level from 4-10 without any change.And adjusted the compression to less tann 10 db.

Any-body has any idea?

The RME DB-22A contains 3 tubes and is used as an
amplifier/preselector useful between 0.5-44 MHz. It is a good companion
to a number of Hammarlund receivers (plus others) such as the HQ-145 or
HQ-180. The unit works well and has a little (very little) rust on the cabinet.
Asking price is US $40 + shipping. I can be contacted at (514) 344-5966
or at jfjbarna@sciborg.uwaterloo.ca. Please feel free to email me if more
info about the DB-22A is needed.

>If not, how do I get rid of it.

>73 de John K4JK

My opinion is that it is normal for IC751A. I have same noise even if
controls are "off". Because this tranceiver is radiotechnically
good radio, I have though to build a new AF-amplifier for it.
(No need for vy expensive new radio :)

But, what is a good AF-amplifier IC for this purpose ? (With no noise ...)
Does anyone have any ideas ?

Scott:
It seems like every time I ask a question you come back
with a reply. Why don't I just by pass the group all together? We'll
scott I agree with what your saying overall. I like my 745 a lot and
think that the only thing that's swaying me is the automatic ant tuner
for both HF and 6m. The thought of cranking a roller or fliping switches
doesn't really appeal to me right now. But $800 would go a long way in
setting up ant's and various assesories. I come back to the one box that
does it all. I see they new 756's are right around the corner and that if
anything is putting my brakes on. I think the other part of the problem
is I have more time to think about rigs than to actually get on the air.
I have down time at work but when I get home if I don't have a project
going the little gal has me working on something. I just keep reading
about new rigs and can't stop drooling over them. As far as 2m rigs go I
probably will hold out for a IC821H other than 100w out it blows the 275
out of the water and works for satelites. As you know 2m all modes are
like in major demand these days and HF rigs you can't give them away.
Darn those nasty little sun spots. Well thanks again for you always
prompt responses and I'll take your advice into consideration. I think
that 6m transverter would work great on the TR-9000 since it is already
all-mode. I assume you built the kit? The qst review suggests that it
goes together pretty easy but what about alingment??

Thanks again Brad

From: Thomas Hagstrom <hagstrom@concentric.net>
Message-ID: <328AAAF8.46D5@concentric.net>
Source record: 190838

I just went through the same thing. W7CWK advised me to run the home mounted mobile off a car battery, which in turn can be trickle charged with an inexpensive PS. Since on par you won't transmit for hours in a row, it has plenty of power for rx, and will work when the lights go out. Also, I happened to need a car battery charger, which I now use to keep the car battery charged, it will also charge the "car" batteries. I bought a charger that turns itself off when the battery reaches 13.8 volts at PEP Boys, but I saw a better version at Sam's club for $49 tonight. I am transmitting full quieting even with the car battery charger I am told.

Anyway, this is an option that works for emergency backup, and you can set it up for about $100.00.

R. A. Green <ragreen@ix.netcom.com> wrote in article
<3284fbbf.6968823@news.pacbell.net>...

Hi Ron:

What you say is true. There is an extreme risk. We, as hams, have done business this way for a long time with very good results. I have heard of very few instances where problems have occurred. Understand too that the risk is at both ends. Take the time to talk to your prospective purchaser or seller. If there's something wrong you should be able to pick up on it quickly. Outrageous claims or prices way too cheap could be indicators. If all else fails ... go pick it up in person. If an eight hour drive saves you a few hundred dollars you made out! Good luck. Larry

Get the Yaesu FT-50R! A great, durable radio. Does everything you described and more. I got mine form Ham Radio Outlets (800)854-6046 for aprox. $320. The optional software is a must if you have a computer. With it you can program your FT-50R from your computer, under Windows, then transfer the settings to the HT.

I've had mine a month now and like it very much. There's even a bunch of mods for it that I'm for you can find in this newsgroup.

Amran :)

ps, Goodluck in your search.

> >Has anyone had any experience with these?, which one should I buy?
>
> >Email: dm@millennium.co.nz

Had a TH-79 and while it was a very nice ergonomic radio to use w/ 2
recievers. It didn't seem to be nearly as sensitive as the FT-50 is.
Used it with many antennas
until someone stole it out of the back of my rental car (DOH!)

The FT-50 wouldn't do much in the Aircraft Bands until I added the
Diamond SRH-519
Antenna. This is a wide range recieve, amateur TX antenna. Looks kinda
thin and wimpy but WHAT a difference! This thing is now as sensitive as
the King KX-99 Aircraft portable I own. Very good AM detector in my
book. Antenna helped VHF Hi. UHF & 800 significntly as well.

FT-50 gets my nod.

Hello!

THE FOLLOWING IS A COPY OF A BULLITIN I FOUND IN A NEWSGROUP. IF YOU ARE INTERESTED IN MAKING A LOT OF MONEY, FOLLOW THE INSTRUCTIONS BELOWï¿½GJ

Would you like to make thousands of dollars, EASILY, QUICKLY and LEGALLY,

with NO CATCH? Then keep reading....please take five minutes to read

this article it will change your life, just like it did mine. It's

true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe

sooner! I SWEAR IM NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're

interested, keep reading; if you're not, I apologize for wasting your

time.

Here we go. A little while back, I was browsing through these

newsgroups, just like you are now, and came across an article similar to

this that said you could make thousands of dollars in weeks with only an

initial investment of $5! So, I thought, "Yeah, right, must be a scam",

but I was curious, like most of us, so I kept reading. Anyway, it said

that you send $1 to each of the 5 names and addresses stated in the

article. You then place your own name and address in the article at the

bottom of the list at #5, and post the article in at least 200

newsgroups (there are thousands). No catch, that was it!

So after thinking it over, talking to a few people first, I tried

it. I figured what have I got to lose except for 5 stamps and $5, right?

Well, guess what...within 7 days, I started getting money in the mail!

I was shocked! I still figured it would end soon, and didn't give it

another thought. But then the money kept coming IN, tripling in size

and multiplying by 10-20 times the amount that I got the first week! In

my first week, I made about 20 to 30 dollars. But by the end of the

second week, I had a mad total of over $1,000 dollars!!!! In the third

week, I had over $10,000 dollars, and it's still growing. This is now

my fourth week (Oct 11) and I've made about $42,000 TOTAL, and the money

is STILL coming in.....

Let me tell you how this works and most importantly, WHY it

works...also, make sure you print a copy of this article NOW, so you can

get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 separate pieces of paper and write the following on each

sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER

4." This is the part of the process that makes it legal, because now

you are sending money for a service (a mailing list). And by doing this

you obviously increase your profits even more! Get five $1 bills

and place ONE inside each piece of paper that you just wrote on, and
fold

each piece of paper so the bill will not be seen in the envelope
(otherwise,

nosy people who like to steal envelopes with money in it will get
yours).

Put one paper inside the envelope and seal it. Do the same for all 5.
You

should now have 5 envelopes sealed, EACH have a piece of paper AND a $1
bill

stuffed inside of the paper. Make sure those words that were stated
above

are stated on each paper. Now then, mail the 5 envelopes with paper and
$1

in each to the following 5 addresses:

1. S. Shaw
611 23rd Street
Sacramento, CA. 95816

2. C. Haney
350 E 700 S #K201
Salt Lake, UT 84111

3. M. Vandergriff
4003 Red River # 206
Austin, Tx. 78751

4. J. S. G.
2206 E Summerwood
Layton, UT. 84040

5. G. Joens
3628 Whitney Ave.
Sacramento, Ca 95821

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becomes 4, 4 becomes 3, etc.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what YOU need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there's close to 18,000 of them). All you need is say, at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small change you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above

Cc:

6) Here's where you're going to post all 200. OK, click on any news group then click on 'To News', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once so you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN; now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CTRL" KEY AND THE "C" KEY
AT THE SAME TIME TO COPY THE ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO.

NEXT, GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE" A WINDOW WILL OPEN. TYPE IN YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CTRL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHTLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE IN A NEW NEWSGROUP ALL YOU HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it) REMEMBER 200 IS A MINIMUM. The more you post to, the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!!

You are now in the mail order business and will start receiving your $1 envelopes from various people all over the world within days. HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!!

Out of every 200 postings, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thatï¿½s $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50X200). Average return is 500 at $1 each is $500. They make 200 postings each with your name at number 2, which is 100,000 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! And finally, 5,000 people make 200 postings each with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!

When your name is no longer on the list, you just take the latest

posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT NUMBER 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOING THE INTERNET AND READING THESE ARTICLES EVERYDAY, JUST LIKE YOU ARE RIGHT NOW!!! So can you afford $5 dollars and see if it really works? I think so.....

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on

the newsgroups to make sure everyone is playing fairly. REMEMBER,

HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO

MAKE THE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL

REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH.

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE

WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!!!!!!!!!!

2462. FS: DRAKE SW8

ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/sbfft11.zip 1032518 bytes

sbfft11.zip Sound Blaster spectral display and filtering

Features:
* Sound Blaster 16 (or 100% compatible) input and output.
* Band widths of 2K, 4K, 8K or 16K Hz.
* Spectral resolutions of 1 Hz to 16 Hz per pixel.
* Display of power spectral density with any of 4 color maps in either
linear or logarithmic scale.
* Define and use as many as to six filters simultaneously -- band pass,
band stop, low pass, and high pass.
* Filters are defined graphically by mouse movement based upon
the displayed spectrum. Once you see a signal, you can
quickly define a pass or stop filter around the signal by clicking
and dragging the mouse.
* Net filter passband is displayed at all times.
* Filters can be selectively enabled and disabled by a single
keystroke.

Special requirements: DOS 3.0 or higher, SB16 or 100% compatible, SVGA,
VESA modes 101, 105, mouse.

As you more than likely can tell I'm new to amateur radio all togeather.
As I am currently prepairing for my Novice or Tech operator license.
Which I hope to have moris code commited to memory by 7 Dec.

I have subscribed to QST and read all material that will help me with my
knowledge. I fell that too get the best advise ask the experinced amateur
radio operators and learn from the hands on amateur radio operator.

The aere I live in is lacking in amateur radio equipment and store, as
theres only Radio Shack to select from for equipment. What I would like is
your oppinion on what HT (hand held) and base radio is a good brand for a
beginer. That would also give me room to expand on as I improve in my
knowledge and operator lisense in the years to come. Feel free to writie me
at: bassfish@imcnet.net

Thank you for your time and information
Hope to be on the air by X-Mass

Dan

2478. Good modem for satellite work?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-13 00:00:00 UTC
From: Chris Lewicki <chrisl@seds.org>
Message-ID: <56c36c$104c@news.ccit.arizona.edu>
Source record: 190899
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

Hello,
Our ham club is setting up a satellite station and we're going
to be purchasing a modem to replace our twitchy pac-com 1200 BD psk
modem. As for criteria, we'd like to be able to communicate with
everything up there, possibly including Wefax, as well as be able to
expand it to 56Kb/s at some point.
I'm not too familiar with how the different modems work (as
far as the separation of TNC and modem), but I'd like something that
has one line to the radio, and the other to the serial port on the
computer. Capability to use under Linux is a boon.
So, from what I've gleaned from various publications, these
are the ones I've been looking at:

AEA DSP-2232 (or 1132)
TAPR DSP-93
PacCom Spirit 2
AEA DSP-232

Out of these, I've only had a chance to play with the TAPR modem, and
even though I couldn't really get it to work, I kinda liked it (I'm
sick that way). I've heard some people say that it isn't "completely
finished" yet, but I may be willing to wait for completeness if it
works in some fashion now. The fact that TAPR is just down the road
(I'm in Tucson), make it a bit more attractive, and the extra $500 I'd
save compared to the 2232 can go a long way towards something else for
the station.

I like the "dual-port" capability of the 2232, but I can't say I'd use
it sooner than a year from now.

I know the Spirit has 56KB capability off the bat, so that's a plus there...

No idea about the DSP 232.

Any other ones out there I'm neglecting?

I'd be gracious to hear people's experiences or suggestions with any
of these modems.

Brian,

It is a good antenna tuner. It is able to tune my 23' boat antenna to just about anything - ham and commercial.

Occationally, it will refuse to tune up on 20, but all have to do it tune up on another band, then try again on 20m. That fixes it.

73 de VE7MDL ....Erik.

I have an Icom IC-751A HF transceiver, and have a question. With the AF GAIN and RF GAIN controls fully CCW (off), I still get a noise. It does not sound like a 60 HZ hum.

Is this normal?
If not, how do I get rid of it.

Source record: 190915

I keep running into references to the use of a grid-dip meter for measuring the frequency of resonance of antennas and circuits. I sure would like to know the resonant frequency of some antennas I am building. I have an MFJ-259 and could get the grid-dip meter attachment (some coils) for it. Could some kind soul please tell me what a grid-dip meter is and how I might apply one? Or point me to some references?

Source record: 190917

I left T.I. 10 years ago, but to the best of my recollection, the TMS1000 was a mask-programmed device. You would have to get ICOM to order you one as they own the mask. It is also possible that T.I. semiconductor has improved their processing lines to the point where they can't make the TMS1000 any more. I think that chip was designed for a 4" wafer, and I don't think anyone runs a 4" line any more.

2497. Elmer Advice on Upgrading Gear

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-13 00:00:00 UTC
From: ashleyb@ohsu.edu
Message-ID: <56d69v$j64@fremont.ohsu.edu>
Source record: 190918

To The Group:

I am posting this request to the group for some Elmer Advice.
I currently own an IC745 HF Xcvr and a Kenwood TR-9000 2m all mode
what I am pondering is to upgrade these to newer rigs. At the present time I have an offer to trade my
IC 745 + $800 for a like new IC736. I like the idea of having
everything in one box but I'm wondering wheather I would gain
much more? The other idea would be to trade the TR-9000 on say
an IC275 or even a IC821H. I realize a lot of people have used
these rigs and really would like some help. Therefore, my
questions are: 1. would upgrading from my IC745 to the IC736 be
a smart move?? and 2. would I get much by trading my TR-9000 on a
newer model. Additional info: I hold a tech plus and am working on
code for my general ticket. I like 2m SSB and possible would like
to try satelites at sometime. I occ. talk locally on 10m SSB and
would like to get on HF SSB at some point. If you can help me
with some good advice please do. I look forward to your reply's.
Also could you please Email me directly since I have a difficult
time connecting with the news group from my internet access port.

Address ashleyb@ohsu.edu Thanks Brad WB7TSO

In the most recent issue of "World Radio," I saw a preliminary review of the Alinco DJ-S41T mini-handie-talkie. Anybody know much about it? It is a 340mw 440 miniature HT. I checked it out on Alinco's webpage, but does anyone have one? Are they available yet?!

The list price is supposed to be under $150! Wow! And I saw it listed on Ross Distrubuting (Idaho) for $135. I think I need one!

Anybody have any experience with it yet?!

2503. Handheld reccomendations

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-13 00:00:00 UTC
From: Michael Huffaker <huffaker@tempe.enet.dec.com>
Message-ID: <01bbd1a7$cee9e800$c9904110@susi>
Source record: 190924

I am a newbe to Ham Radio and have just passed my no code novice and technician exams last night (no call sign yet). I am interested in reccomendations for a hand held dual band (2m/70cm) unit because:
* I do bicycle tours and need something light to use for emergency communications
* I backpack so it needs to be rugged and could get damp
* I want to autopatch to my wife when she pages me and I am in the car
* I travel a lot and it would be fun to have the radio with me in different areas of the US

I expect to spend $300-450.

Any suggestions on makes, models and places to buy one is appreciated.

Mike

Len,

I own a TS-870S, and I'm trying to understand what you're talking about. How about some more details on this? Maybe it's just me, but your words above don't make sense. Which numbers get blurry? The digital display? I don't get it. Are you trying to say that if you zero-beat WWV on 10.0 MHz and tune off of it, then tune back, it will no longer be at 10.0 MHz?

As for the physical position of the VFO knob being different, this has to do with the optical pulse encoder that is used to tune the PLL, and the rate at which you rotate it. This is normal for this type of setup. I have seen this on many rigs.

>--
>73,
>Butch N2YMJ

I bought it and built it. I still don't have the transmitter PA going,
but I haven't spent enough time with it yet. Whether this is a good buy
or not is subject to your opinion.

If you're wanting to build the rig for the fun of it (and bragging rights),
then do it. It's a well-made PWB and it goes together easily. The manual
is good also. And you can't beat Ten-Tec's customer service. If you have
a problem, they'll help you troubleshoot the rig over the telephone. Just
try getting the Japanese manufacturers to do that!

However...
The TT-1220 lacks an S/RF meter. It doesn't have a DTMF mic, and they
don't currently sell one. It has no scanning capability. There is no
provision for CTCSS on recieve. It won't receive outside the 2m band
(which is a problem for Skywarn folks who need to pick up NOAA weather
radio). The front end is very broad and is subject to intermod.

If you want performance, buy a Japanese 2m rig. The TT-1220 with the
35 Watt PA will set you back about $280. For less than $250, you can
buy a nice used late-model 2m rig.

It all depends on your wants and needs...

The program is Win95SSTV, and the shareware beta version is at

http://www.wolfe.net/~jlbarber/sstv.htm

You'll need a scanner to convert your photos into files for
transmission, also. A small graphics editor is built into Win95SSTV, so
that will help with titles, etc.

One thing -- you don't broadcast anything in Amateur Radio... This is a
TWO-WAY communications service, after all.

Good luck & 73...

John:

Does your rig have the built-in power supply? If so, that could be the source. I'm assuming the noise you hear is low enough that it is not noticeable during normal reception?

Hi all

I own an SG-230 for several years now and use it in a fixed installation
at home. It tunes a 10m high vertical (fiberglass "fishing rod" with a
wire inside) on all bands from 160m to 10m. The SWR however is not
always 1:1, the spec says 2:1 max, which I think is true.
The first tuner I destroyed, probably by unwanted tuning activity during
a transmission, caused by RF on the DC supply. The new one has an
additional control input which either forces a re-tuning or locks the
tuner in its present state. No more problems since then.

2514. How Valuable Old Ham Gear?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-14 00:00:00 UTC
From: Keith Poole <kp2a+@andrew.cmu.edu>
Message-ID: <AmWo9wu00iV9030sZx@andrew.cmu.edu>
Source record: 190786

I have a friend (not a ham) who buys and sells antiques. In 1978 he bought the estate of a family friend who had committed suicide. The guy was a ham and he had a lot of old gear including several hundred tubes that date from the late 1930s and early 1940s. There are 2 1950s era receivers -- HRO-50T1 and HRo-60, a Breting 14AX shortwave radio (I assume this is a German made radio from the 30's), a Freed-Eisenmann Radio Corporation Neutrodyne radio, and piles of miscellaneous old stuff.

Can anyone tell me (approximately) what these radios are worth or a source (like an automotive "blue book") that would give me some idea? I am not interested in the equipment myself and I have no financial stake in this. The equipment is stored in an unheated attic and I would like to see it get into the hands of collectors who can restore it before it is damaged and give my friend a fair price for it.

Thanks a lot.

This great little rig is in mint condition, and is better than new: It
has the all-freq (1.8-30 MHz) transmit mod and puts out a solid 130-140 W.
Perfect for mobile or portable use, and also works great in the shack!
Complete with pwr cable, mic, manual, mounting bracket, and original box.
$700 shipped.

>band version? Price it less than $175. Put me down for one - I can't
>resist cute new toys like that.

I've solved the DTMF problem. Electronic Rainbow had the AT&T 123A
electronic dialer on sale at the show. This is a tiny acoustically
coupled DTMF memory dialer. I wasn't sure it would work, but I tried
it with my C508A and it works like a charm. It only has 9 memories,
but that's enough for me, and it can be used manually too, of course.
I've added it, and a rubber band, to my low power HT pack (a soft
cellphone holster). Also in my pack ride a spare pair of alkaline
AA cells, and strapped to it the Comet SMA-3 antenna (a *real* range
booster for the little C508A).

The little C508A looks more than a bit ridiculous with the tall
Comet antenna and the TT pad fastened to it with a rubber band,
but it allows me to use the radio on occasion as more than a remote
mic for my mobile rig (that's how I normally use the radio, the
vehicle's dualbander acts as a crossband link to get me into
distant repeaters as long as I'm fairly nearby with the HT and
its stock stubby dummy load).

Its a great radio CTCSS encode/decode, DTFM memorys, tone sql and paging, several scanning modes, Dual VFOs, Clock, and a bunch of other features.

Icom IC-W2A

Dual Band HT
7.2V - 1000Mah Ni-cad
12 VDC charger/car adapter
AA battery case
Speaker Mic

Manual and schematics

I have the not done any hardware but have the info for them. I have done the "keyboard mod" that allows for extended RX range of something like;

~108-136 AM (Air band)
~136-174 FM
~450-950 FM (including Cellular W/ a 30Kc step available)

I have also done the other "keyboard mod" that allow this radio to cross band repeat. Nice.

I'd prefer a local buyer(Washington DC area). But will ship it if buyer pays shipping and its COD only. I'm asking 250$US.

Michael Wilsher

We've been runing both the 27A and the 27H for over 7 years in two vehicles. Based on advice from my father in law (who spent a lot of time fixing 27Hs), we backed the 27H output power down to 35W. Except for an intermittent DTMF generator in one of the microphones, we haven't had any problems.

Regards,
Ed

>I just got a new IC-706. Everything worgs OK but the HF audio quality. (VHF
>audio is excellent)
>
>The reports I get is: Very strong signal but very low modulation! (with or
>without compression)

This is a rather incredible report. On SSB, the signal *is* the modulation translated to RF. Think about it. With no audio in, there is no RF out, and with lots of audio in, there is lots of RF out in a direct one to one correspondence. And on receive that RF is translated directly to audio again in a (hopefully) linear manner. So if you've got lots of signal, you *have* to have lots of modulation. It can be overdriven and distorted, but it has to be there. Anyone telling you that your signal is strong but your modulation is weak when operating SSB is a very confused person.

There have been some complaints of poor *low frequency response* with the IC-706 in SSB mode. The fix is to use item Q4 on the quick set menu to adjust carrier in relation to the SSB filter to improve low frequency response. But this will have no effect on the *amount* of modulation you have in relation to the amount of RF you transmit. That *must* be a linear relationship if the radio is operating in SSB mode.

You *are* in SSB mode on HF aren't you? If you're still in FM mode, that's different. The radio uses the same modulator for HF FM as for VHF FM, so there should be *no* difference in deviation from one to the other.

Good kit, but it is a very plain radio compared to the various
Japanese offerings, and it is somewhat larger than most of the
Japanese radios too. They aren't offered as kits, however. If
you want to build a 2m kit radio, this is the one to buy, nothing
else on the market comes close to it. If you're just looking for a
cheap way to get a 2m radio, though, buy a used Japanese transceiver.

Have not played with the 870, but variable-rate tuning would explain
this.

National Semi has a couple of low noise preamps (most of the noise
figure is from the first gain stage...) the LM833 is fairly good (Hi-Fi
quality) at 4.5nV/squareroot(Hz).

I'm in agreement about "buy the FT-50R", as I have owned one for
several months. Fine little HT.

But, there IS a d.c. power connection on the side of the radio, you do
not have to hook up to the battery with an adapter as stated above.

Yes, the FCC just created a 'family radio service'. Actually it is on the current interstitial channels for the General Mobile Radio Service.(GMRS). The difference is that the units are only 1/2 watt and the max deviation is set to 2.5 KHZ as opposed to the normal 5KHZ deviation. Also the antennas on these handhelds cannot be removed from the radio. Radio Shack and Motorola (as I understand it) pushed the FCC into creating this licence free band. Radio Shack is selling one of these radios. Its about $180.00 !

I think they are hoping this will appeal to the people using 100mw 49MHZ stuff.

I would recommend getting a GMRS license instead. The GMRS radios don't cost much more than the FRS units and a GMRS license is only $60.00 for 5 years.

There is a GMRS web site that mentions the FRS.

its located at: http://www.primenet.com/~n7ory/gmrs.html

Another site is at http://www.li.net/~j4dice/scanning_info/gmrsfaq.html

Hope this helps!

Does anyone out there have an SBE-34 transceiver gathering dust in their collection? It was one of the first (mostly) transistorized rigs in the 1960's when I was too young and poor to afford one-now I want one for sentimental value. I posted something on here several months ago and received a response from a ham in Arizona, procrastinated and now can't find the notes. So if you're out there, or anyone else has one, let me know. There was also a linear amplifier called the SB2-LA that went with it. I'd be interested in one of those also. The stuff was made by Sideband Engineers, (SBE).

Rotator, control box, manual, 100 feet of cable and -- for good measure -- a mounting plate for a Rohn 25G tower. Unit has been in mothballs for nearly 10 years, following a relatively brief stint turning a small 2-element tri-band beam. I'm the original owner; I've finally given up on ever again living in a place that allows towers. All for $250 (I pay shipping CONUS). Terms: cashier's check or money order in advance (no COD).

I too like the C508A when I first saw it but I just cant stray from my
Yaesu Ft-11. Its got a TON of features and DTMF and its an inch taller
than the C508A. I normally use it much like you use yor C508A, and use
my mobil in cross band repeat. I keep the pwr cranked down to 300mw or
I can bump it to 1.5W, which is sometime nesscery since I'm using a
CH-32 mini ant (AKA radiating dummy load :-). I have had the radio for
about a year and where I go it goes.

I built one shortly after they came on the market. It is a "basic" two meter rig in the sense that it does not have many "bells and whistles."

I believe that a recent issue of QST gave a quick report on it as well as some other two meter radios. Suggest you look this up (October or November issue I believe).

If you want to build a kit for your own satisfaction or to experience how a radio works, this is a great kit. If you want a "good bargain" I do believe that for a few dollars more a cheap Japanese rig would maintain its resale value better, but that is my opinion.

I would buy the kit again for myself, it works fine and I like the fact that it is simple to operate. The audio is excellent in both Xmit and Receive. Seems to have fairly good intermod performance.

Good luck whichever way you go. --Ed AA6NI

I bought and build the 2 meter kit. Had a great time and learned as I
build it. Customer support is great. The manual goes back to the
Heath-kit days. TEN TEC has a web page-www.mvangle.com/ten tec/
While it is a very basic 2 meter rig, your can learn a lot by building
your own. If you are after whistles and bell, go over seas.

> Brian N6ZAU

Slight correction. The Yaesu does have a connector on the side - at least mine does! However, it's a Sony Walkman connector, not easy to get except from Yaesu dealers, and costs in the UK about 6 UKP (compared with less than one UKP for a 'normal' power connector. The set will only trickle charge through this connector, and needs the bottom connectors for a fast charge.

In addition, the Yaesu has an SMA antenna connector - presumably to meet the MIL-STD 610 spec, and quite welcome considering the problems you can get with BNC connectors. However, you do need an adaptor (again, from Yaesu at a price) to connect a BNC terminated lead or antenna or else have to buy an expensive SMA connector.

Earphone and mic connector is also not standard on the FT-50 - you need an adaptor for the four-terminal jack socket.

Maybe all this sounds a bit negative about the FT-50, but I'm happy with mine.

Packet radio uses the Bell 202 standard for 1200 baud VHF operation
and the Bell 103 standard for 300 baud HF operation. Both are operated
half-duplex. Your telco modem doesn't support half-duplex (on the telco
side), and doesn't support Bell 202. It may do Bell 103, but probably
can't be forced to do it half-duplex. 9600 baud packet uses a completely
different modulation from what telco modems use. And your modem certainly
doesn't have the NRZ-NRZI conversion ability, or the HDLC functionality,
or the PAD functionality of a TNC.

RTTY uses a different shift, and a different baud, than your modem
will support, as well as also being half-duplex, so that's out too.
The real problem is that your modem is a "smart" modem, but it wasn't
given the "smarts" to do anything but telco duplex operation. You
need a dumb modem which does the proper shifts and bauds, but doesn't
get in the way of the data manipulation the computer needs to do,
and doesn't care if it is operated half-duplex. A very old dumb
leased line modem can work (and in fact is the origin of the packet
radio standard, which adopted Bell 202 because a lot of leased line
modems using that standard became available surplus in the latter
1970s when packet was getting started).

However, there are cheap ways to do both packet and RTTY which don't
involve attempting to use a telco smartmodem. The Baycom method is
very popular for ordinary 1200 baud VHF packet. This uses a single
chip modem and a software package which runs on your computer. You can
wire up the modem chip into a RS-232 connector hood for under $10,
or you can pay $50 for one already assembled. Older versions of the
software can be found on the net, or you can buy the latest version
from several suppliers along with the modem. (The chips are getting
hard to find, since they do modem standards which are obsolete on
the telco network, but there are still some out there.)

RTTY can be done with something as simple as a zero crossing detector,
IE an opamp wired as a comparator, connected to a serial or parallel
port status line, and a software package available off the net. But you
can build a much better RTTY TU (Terminal Unit, RTTY-speak for modem)

for very little money. The old Hoff design (in old ARRL Handbooks) is still very good, and can be assembled from a number of 88 mH telco loading coils (available cheap, or free, surplus), and an opamp slicer. If built carefully, this is the near equal of all but the very most expensive DSP RTTY boxes.

If you can't find any telco loading coils (I found two boxes of them still in factory wrappings at a recent hamfest), then you can use opamps to make state variable filters, or you can use a pair of switched capacitor filters (chips available at Radio Shack) instead. This is a bit more complex, but it isn't hard.

RTTY transmit is FSK. If your radio doesn't support FSK already, you can easily modify it to do so with a varactor or a small trimmer capacitor and transistor switch added to the VFO, or a conversion oscillator in a synthesized rig. Most current radios already support FSK, but it isn't rocket science to add the capability to those which lack it. AFSK is a last resort, but you can do that too with a voltage to frequency converter chip available from Radio Shack.

A simple terminal program with Baudot to ASCII conversion completes the system (you can write this yourself in an evening, it isn't complex unless you want fancy scroll back buffers and the like). If you're running unix, you can just pipe the data through a code conversion filter to your favorite terminal program (even cu).

I'm not sure of the particular manufacturer, but it sounds like an 'Arcnet' adapter to me. Arcnet is a networking protocol like Ethernet or Token Ring... It's efficient (ie, no collisions), but slow compared to 10 Mbps Ethernet or 16 MBps Token Ring.

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

The radio is indeed available. My brother-in-law purchased one from RT Systems (Hunsville, AL) at the Stone Mountain, GA Hamfest and he likes it. It is not as small as the Standard C508A, but there are two things I really liked about it. First, the antenna arrangement is nice. It just folds over out of the way and flush with the radio body. It stays connected, so I suppose you could wait for a call with the radio in your shirt pocket and then fold it out when you are ready to transmit. (Have not tried that, though.) That takes care of a concern I always have: It is inconvenient to carry a radio with the antenna attached, but repeatedly removing and putting it back on wears out the BNC (or whatever). The second thing was the price. Performance? He passes through my area frequently on business, and I am surprised that he has the range to hit the local repeaters pretty well. It does better than I would expect for the power level. Things I don't like are : no DTMF. Just like the C508A. Sure wish they would put a DTMF memory of some sort, even if they couldn't put the keypad. Also, it could be a little smaller. OK, so that last one was pretty picky. Now how about a dual band version? Price it less than $175. Put me down for one - I can't resist cute new toys like that.

regards, Don (KE4KYO)

> Bob KB0CY

Two other points for comparison:

1. Kenwood has an external connector on the side for 7-12 volt direct power and charging, Yaesu requires an add on connection assembly that must fit onto the bottom of battery contacts (KW connectors avail from RadioShack).

2. The Yeasu has a direct battery voltage display if selected. The KW does not (must check battery voltage by approx. power out on meter while transmitting).

Source record: 190866

Has anyone else seen this problem:

Place the 870S in CW mode and rotate the dial away from a solid carrier signal (like WWV for example) at least 1 Kc. The dial numbers will jump to the point where they will blur to the eye, which is normal, but when you stop moving and slowly return to the original position the signal will have moved - from the previous physical position of the dial.

For example, if you zerobeat WWV and perform this test, to get zero beated again you will find you need to move about 1/8 to 1/4 turn from your original position.

I discovered the problem during SS when stations appeared to be "moving" around on me. I thought I was just tired!

Here you go!

This mod is a new mod as of 11/3/96

YAESU FT-50R Expanded Transmit 120-230, 315-505 MHz [FREEBAND MODIFICATION]

1. Remove battery
2. Remove the Ni-Cd sticker
3. Slowly lift off the keypad and carefully locate the jumper pads
4. Locate and unsolder jumper number "1" (see picture below) it is a solder blob between 2 pads.
5. Locate and unsolder surface mount resistor "A" (see picture below) be carefull! It is the first resistor on the left
6. Reinstall the keypad with the two screws
7. Turn radio off
8. Press down and hold the tuning knob and lamp button while turning on the radio.

VIEW: looking down with keypad removed

```
*** ***
= ***** * ***
I ********************
* ---------------- *
I* | [FREEBANDER] | *
I* | _____________ | *
* YAESU *
I* ================ *
I* ================ *
* ================ *
* ========== *
* *
* ---------------- *
* | ABCDE | *
* | IIIII | *
* | : : : | *
* | 1 2 3 | *
* ---------------- *
********************
```

10. The vfo should display 144.000 Press FW. (this step may not be needed but it worked for me)
Power off.
11. Powerup with lamp/ptt/knob held down. It should now be in tune mode with something new

(BAND= A 1) change it pressing the knob for 1/2 second and then turn the knob to FREE.
(BAND=FREE)
12. Power off and back on NOW RADIO DISPLAYS 50~540 590~1000 no gaps!!!
(Dont change any other function or you could screw up alot of adjustments here)
IT will tx where ever it locks. One radio 122~231 and 309~502 and another radio was
120-232mhz and 315-509mhz. This varies radio by radio.
Tx is only miliwatts near the edges (DONT TX OUT OF BAND!!!).
Rx locks after about 74mhz. it is very def in the 220 band tx is miliwatts. no tx above 502
but varies radio by radio.

13. If you have the ADMS 1 software you should have a copy of what was in your radio.before
you
started.
14. Copy from the radio. Save and name this file FREEBAND. This is to be saved as a clean
copy for
future use.
15. Copy from the radio again (or just copy the file) name this file MERGE.
16. Merge the old file to this file and send to radio.
17. With your palms facing forward put your thumbs in your ears, wiggle your fingers and
stick
out your tongue at your Users manual while it is open to page 10.
18. Then update page 10.

Dont make the FCC and Yaesu angry at you by trasmitting where you are not supposed to.

This information came from a Newsgroup message by Alan Judd, information gained from the
Web Page
at
http://members.gnn.com/hca/ft50/index.htm and my own attempts at restoring the radio using
this
FREEBAND Mod.
Please give Alan Judd great thanks for subjecting his radio to T&E R&D (trial and error
research
and
development).

You would have to make a few modifications for a modem to work with your radio.
A telcommodem is expecting a continuous carrier from the non-originatingg
modem. A TNC is a simplex device, and doesn't need a carrier to maintain a
connection. You could set up a pair of radios and try to get them act in the
same manner as a repeater (in a duplex mode), but the other end would have to
be set up in the same manner. This also requires one of the radios to be
operating at a 100% duty cycle. Also, for the duration of the connection, you
will be transmitting a carrier, thus blocking anyone else using the frequency.

As far as a limited budget, try looking into a TNC like the Kantronics KPC3
(what I use), which run about $150 (high estimate). With a TNC, you can have
multiple connects, and a built in pbbs. I have since upgraded the memory to
128K and installed a KA-node chip. Both upgrades took less than a half hour.

Some limitations are the KPC3 has a max baud of 1200, but I really don't notice
it because I'm not transferring a ton of data in any one burst, and I have a
19.2 transfer rate between the TNC and the computer. another limitation is
that you have to add the HF port if you want to do anything below 50MHz.

Hope this is of some help, and hope it didn't scare you off of packet.

Hi John,

Six months ago, I had an ICOM IC-765 with the some problem.
I was thinking the reason of the noise was caused by the
internal switching power supply.
Do you have it installed ?
At which frequencies or which band this problem comes out.

> Harris
> VE6DK/W6

Best bet is to use 10 lb monofilament first. Once you get that over the tree (and find the end - I use a small sinker and some fluorescent orange streamers), tie at least 30 lb mono and pull that through. Tie your rope to the end of the 30 lb. mono. This prevents breaking the light line if you get tangled up in a branch.

BTW - I prefer to use the spinning rod method. I can cast the line generally where I want it anytime of the year. The slingshots don't work to well in New England when the temperature drops - they tend to lose some of the elasticity (or I lose strength to pull it back). Good luck, though.

John:

I installed a EX310 voice board in my IC751A that had the jumper cut (used
to speed up voice). This caused quite a bit of noise, even when the gain
controls were down. Re-connecting the jumper solved the problem. If you
have this option, check out the jumper, or temporally disconnect the EX310
to see if the noise goes away. The EX310 has it's own volume adjustment
that bypasses the radio's audio control.

Message-ID: <328cd8c6.1278318@news.rdu.bellsouth.net>
Source record: 190682

I purtchased a IC-3230H from him via Fed Express. The radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

Yes, the FCC has just released rules creating a Family Radio Service (FRS). The rules authorize the use of unlicensed radio communications equipment in between the 467MHz GMRS radio channels.

Under the rules FRS radios can be used as repeaters, interconnected to the telephone system, used as remote control for other things, or even as long distance baby monitors transmitting continuously.

Bear in mind, these FRS channels are squeezed in between the GMRS channels at 12.5 KHz increments. This portrays a future of interference to both services. Sounds like a real mess to me.... kinda like 27MHz.

In rec.radio.amateur.equipment you write:

>Hello All, looking into getting a Kenwood 440S..
>What is the going used rate for one of these?

Hi Jason:

The 440S/AT with a filter or two seems to advertise at an
average of $600-$700. If you end up at the higher end,
try to demand a few extra goodies, or make sure it is a
high serial number and in very good condition.

I have a 440 for a few years and really like it, even compared
to many of the big rigs like the 940 (had one) and the Ten
Tec OMNI VI (had one). It is not quite as good as these
radios, especially in a crowded contest band, but heck, it
is 95% of those radios for way less than 95% of the price,
hi hi.

Larry,

I have owned an TS870 and the radio is a real pleasure to use. I reviewed the rig several months ago and then sold it so I could review another unit (JST245). You will find the digital
filtering is superb. Some will tell you that you will experience "filter blow-by" with strong
signals, but I never noticed this and used the rig both on SSB and CW for several months. The rig is also very good for casual SW listening. The digital filtering lets you simply crank
down the bandwidth until you remove the QRM! I can only think of 3 items that I would want Kenwood to change......provide an input for an external receive ant. and improve the beat cancel
and auto notch functions within the DSP. A strong signal in the passband is difficult to notch
or cancel under certain circumstances. Kenwood eludes to this in their operator's manual for
the 870. Overall, I think the 870 is a very good rig and a good buy. I think most everyone will find things on the current "high end" rigs that they would want to change. Good luck!

Source record: 190693

Hope someone out there can help!

I need to repair a borrowed amp.

The "two pin" Molex connector for the power cord disassembled, and I've had a bit of trouble locating a replacement or workaround.

Any source would be helpful via mailorder, or locally in East PA.

So far, I've been unable to get a response from Kantronics or Molex.

TIA

Quality at many companies is rapidly deteriorating. I would say, on average, one out of three computer items that I buy must be sent back. I have had better luck with other products but the downward trend is still clearly evident. Perhaps this is inevitable in a fiercely competitive market, where the balance has not yet been found between price vs. quality vs. features.

This is why I like Harris equipment. Solid design, repairable, reputable manufacturer who is willing to help even hams and will sell parts for reasonable cost, and great performance. And, of course, made right here in the good 'ole US of A.

well, there is *one* ham company, vibroplex, whose quality today is
the higest it has been in the 100+ year history of the company!!!
look at any of our new keys at your local dealer, they will *WOW*
you...

and, you can also look at them on our web page...

It still amazes me that people are going to pull out this resistor and
do this mod when even the author is unsure of what this resistor is
actually there for.

It also amazes me that people would actually go to such lengths to
listen to cell phone calls and have an unusable transmit capability
while at the same time voiding the warranty of the radio.

Get a life people!

I recently purchased a used 757GX (from HRO) to give me reason to get
that license!
Will use it for SWL until then.

I noticed that in the manual, the original owner (who I don't know)
placed a mod sheet for extended receive. What is the effect of this
mod? The sheet did not give a lot of details. I have not taken the rig
apart to check to see if the mod is still in effect.

My email address is mbwatson@att.com

Thanks!

Like you, I am also a new no-code Technician. I bought a Yaesu FT-50R and love it. I carry it in my belt pack when walking or bicycling, in my pack when backpacking, in my car with a magnetic mount antenna, and in my house with a discone antenna for scanning. It has 100 memories, can listen to two channels at once, is compact, is extremely rugged (I have dropped mine about a dozen times now), has very wide coverage in the scanner (wider with simple modifications). With a 5/8 wave Comet magnetic mount antenna on my Jeep and 5 watts output from my FT-50R from Denver, Colorado I can talk to the Fort Collins repeater, about 60 miles. From the living room of my house in Loveland, Colorado using a rubber duck on the FT-50R I can wake up the repeater in Boulder, about 45 miles. For a good time, standing on the second story of a building in Fort Collins I woke up the Colorado Springs repeater on top of Pikes Peak in Colorado Springs, about 100 miles. My signal was pretty scratchy, I was told.

I got my FT-50R from Ham Radio Outlet in Denver, Colorado. They do mail order and phone order with a credit card.

Eventually, for another $200 you can get a Mirage dual band linear amplifier, which gives you 45+ Watts on VHF and 35+ Watts on UHF, the same as you would get with a full blown mobile dual-band unit. So the FT-50R can double as a very usable mobile or base station. With VHF and UHF amplifier you can even talk to satellites. I am told you can talk to some of the new ones with just the rubber duck but have not met anyone who has done so yet.

Consider an Arrow Antennas VHF folding Yagi "Backpacker" (TM) model (about 18" long in a stuff sack and about 1.5 lbs), or an Arrow Antennas "Walking Stick" (TM) VHF or UHF Yagi (about 4 feet long, with all the elements fitting inside the main beam). Available from Antennas West, on the Web or in adverts in all the ham radio magazines.

The stock Yaesu rubber duck antenna that comes with the FT-50R sucks. I got a Comet SMA-3 aftermarket duck and get much better receive and transmit with it.

hello all

i'm looking for help to build a web page for all radio equipment. i would like to
have a picture, date of manufacture. cost at that time when new. and any other
info that would be of interest.

how many times have you been listening to the swap net and wondered what
a radio that there talking about looks like.
how many times has a good deal slipped threw because u forgot what it
looked like.
just think what the new hams are up against. there trying to decide what
antenna
to buy and don't have a clue, lets help all hams and get this info
available to all.

send ur pictures to me via email for right now. i'll will be getting a
p.o. box tomorrow.
i'll scan ur picture and info to put on line along with ur call who i
received it from.

also looking for a name to call it. any volunteers with experience building
aweb page.
i dont necessary want to make this a commercial but if it gets us what we
need, i'm
for it. let me hear ur comments. i think that this will educate hams and
help sell
ur gear on ur local swap nets.

thanks for any help...

2618. Crisis In New Ham Equipment Market

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-15 00:00:00 UTC
From: james119@iu.net
Message-ID: <56h311$fnp@cc.iu.net>
Source record: 190736

Well I bought a brand new Yaesu FT1000. Discovered it's fan was too noisy and there were some receiver intermod problems, so took it back to AES. Swapped for an Icom 775...much quieter fan and better receiver, but three hours out of the box and the main tuning knob freezes up tight as a drum!

Ladies and gentlemen, is it just me, or are we experiencing a quality crisis in the latest jap ham gear? I believe we are, and big time. If you're thinking about buying a new jap rig that's just come out. think twice!!! There's a 99% chance you'll be sending it back for warranty repairs to fix something that should have never made it out of the factory!

Just saw an advertisement for the all-new Kenwood mobile dual-band transceiver. Features include: detatchable front panel, very very LARGE display (utilizing blue-colored reverse LCD's). Model was TK-77 or something similar (don't recall exactly). Look for it soon in the USA. Advertisement was in CQ Japan.

73,
Joe

These are my Impressions of the TS-570 after a day or two at the controls.
My thanks to Joe, W2HPM who also spent some time with me reviewing this new
Kenwood.

I'm comparing the radio based on others I have owned:
940, 765, 850, Omni6, 450, 50, Delta2, and a 706. I've also operated the
FT-1000 enough to compare it to the others.

The radio was setup by removing all the connectors from the 450 and simply
plugging them into the 570. Only the CW jack changed from a "phone jack
to an 1/8" mini which was quickly fixed with an adapter. The amplifier
keying and PK232 interface all worked exactly as they did on the 450.

The LCD display reminds me most of the IC-728. The numbers are large and
easy to read. The backlight is adjustable via a menu selection. The meter
is a nice compromise between an analog movement and a bargraph, since the
LCD segments are laid out in a radius, resembling an analog movement. This
is a simultaneous
S meter, power level, SWR, Compression level and ALC. It looks like the
audio level function in the 450 was left out of the 570 meter. The peak
hold function works well. (2 segments remain at the peak level for about .5
secs.)

The front panel is well laid out. It's exactly the same size as the 450
but MUCH easier to operate. The location of each of the buttons has been
well thought out for operator convenience or efficient contest operation.
The buttons are rounded rubber, not the squared off plastic and metal ones
on the 450 and 850 and 940. The buttons are divided into groups depending
on function. Each one of these groups has a different shape and feel - a
nice touch for the sightless or sleepy contest operator who has his eyes on
the monitor and only his left hand on the controls. The buttons work
easily and don't take much effort. This was annoying to me on the 706,
Delta2 and Omni6 which take entirely too much pressure to make contact.

This is an important point for contestors.

Joe pointed out that a "reminder" LED was missing from functions like notch (beat canceler and noise blanker) although the LCD segments for these functions are of good size and difficult to miss.

The receiver was compared side by side to my 450. Without doing extensive lab tests with a signal generator, it's seems that the receiver is somewhat more sensitive yet quieter from phase noise. I didn't seem to need the pre-amp in situations where I needed it with the 450. The Noise Blanker seemed effective to pulsing noise and compared to the 450, did not cause the usual distortion on strong signals or strong adjacent signals.

IF shift control works well and I'm please to see it with a center detent, like the 450. I tend to leave mine a few degrees off center which seems to emphasize the lows of a SSB signal, making the signal sound "full".

The memory channel selector knob doubles as a menu selection control. The following functions are not controlled by the menus but can be individually controlled with this "multi" knob: mic gain, pwr level, keyer speed, vox/break-in delay, and bandwidth selector.

The menu function is extensive, yet fairly easy to use. It is similar to the 450 and 850 but has an alpha numeric scrolling display describing the function so you don't need to constantly refer to the manual. We were able to set and control most of the menu driven functions for the first time without referring to the manual.

The DSP function is in both the transmit and receive audio circuits, not in the IF like some of the other radios currently on the market. There are advantages and disadvantages to both techniques and Kenwood has chosen to put it in the AF. I think this was good choice, although I haven't compared it to an IF DSP radio. The complaints I've heard about transmit and receive audio distortion in the 870, appear to be non existent in the 570. Both transmit and receive audio are clean and non-distorted. Even with the DSP beat canceler or DSP Noise Reducer functions on, receive audio is still clean, although it is possible to hear a hint that the audio is being "processed". There is no comparison though to the distortion introduced in the audio through the low end Radio Shack DSP unit. There are two NR selections. NR1 and NR2. One is used normally for SSB and the other for CW. These tend to reduce background "hiss" and is a separate function from the Beat Cancel which works well on SSB. Kenwood could have had the NR1 and NR2 functions automatically selected depending on mode selected, SSB or CW. I don't know why they didn't do this. I'm mostly a CW operator and the NR2 works well but may not be that pleasing to listen to while copying CW at over 40 WPM. There is just a hint of rising edge distortion as the DSP does it's work. What is impressive however, is the "hiss" reduction with the NR function enabled. The receiver is almost completely quiet except for the desired signal.
It would be interesting to compare this DSP with one of the high end external DSP units. The Beat canceler does a fine job of eliminating heterodynes on SSB and does not add any objectionable distortion to the

received audio.

The CW tuning is cute, but I'm not sure how often I'd use it. Perhaps new operators or contestors would find more use for it than I would. I suppose my ear has enough training and experience where I don't see that it's necessary. It is not as precise as I thought it would be as it usually comes within 10 or 20 Hz of the correct frequency depending on signal strength, QRM or keying speed.

I installed the 8Mhz, 500Hz CW filter in my radio. It appears that there is only one spot for this additional filter - I would not be able to install a 1.8Khz filter with my CW filter installed. I don't see this as a problem since a combination of the DSP slope tuning and the IF shift does an adequate job.

On CW, the IF filtering works well. There is a filter bandwidth control that controls the DSP AF bandwidth. The DSP bandwidth is variable from 2.0Khz to 1.0Khz, 600 Hz, 400, 300, 200,100 and 50 Hz! The resulting combination of 500 Hz IF filter and DSP AF filtering reminds me of the Jones Filter arrangement that Ten-Tec put in their Delta2 transceiver which was continuously variable from wide down to less than 100 Hz. I found it difficult to find a crowded portion of the band where the 570's IF and DSP AF filtering could not effectively knock out adjacent interference. Compared to my 450 which had both 8Mhz and 455Khz, 500Hz CW filters, the 570 seemed to be cleaner with less "ringing" while copying CW at narrow filter settings.

The automatic antenna tuner seems to do a good job of matching the radio on any band to my 80 meter dipole fed with ladder line through a 4:1 balun, although the 450 never had a problem either. The "AT Tune" function is different than on the 850 and 450. Kenwood saved the "Auto/Thru" button and put both functions on one button. Depressing the "AT Tune" button toggles the tuner on or off. Holding it down for longer than a second, starts the tuning cycle. The tuner sounds much different than previous Kenwoods. Rather than hearing the whirring of a motor, it sounds more like a relay chattering. It took some getting used to. I'm curious what they did different with the tuner that makes it sound like this. The tuner, like previous radios, memorizes settings for each band.

On Pactor, Amtor and RTTY, the radio performed well. The variable bandwidth of the DSP filter is a nice feature when operating on the digital modes to knock out any adjacent frequency QRM. On transmit, I was able to operate at 100 Watts key down on long FEC and Baudot transmissions with no temperature excessive rise. The radio seems to handle this 100% duty cycle operation. A nice feature for the digital modes are menu selections to vary BOTH the audio input and output from and to the TNC.

On CW, the 570, in my opinion, is the best Kenwood yet that I've operated. My criteria for CW operation is mainly how smooth the transmit to receive transition is, how smooth the sidetone sounds and any audible noise or clicks from either the speaker or relays while on QSK or semi-QSK. The amplifier keying relay is easily enabled or disabled via a menu selection

and with this relay disabled, the radio is very smooth and quiet in QSK. During QSK, you have to strain to hear a small, perhaps reed relay. I heard very little, to no difference in another receiver while switching between semi-QSK and full break in while sending a string of dits at 50+ WPM. This is a test that Joe and I usually run to see how good the QSK operation is and essentially duplicates the CW dual trace scope photo you see in the QST rig reviews. On QSK, I would rate the 570 second only to the Ten-Tec Omni 6 for silky smooth QSK operation and nice sounding CW on receive.

Although the AF output stages are spec'd at 1.5 Watts for the 450 and 570, the 570 seemed to have somewhat less audio drive into my external speaker than the 450. It's not a problem since I never seem to run the audio gain up less than 10 or 11 o'clock . The audio quality on SSB and AM was clean and comparable to the 450.

We ran a number of transmit audio tests on 75 meter LSB. Using a Radio Shack Highball mic, the consensus was that "High Boost" transmit audio equalization, and the mic gain at 40, seemed to work best. A half dozen critical ears on the frequency preferred the 570 over the 450 for transmit audio quality.

The radio sells for about $1,550 mail order.

I'd be interested to hear from other 570 users and will try to answer question from others who may be interested.

>an IC275 or even a IC821H. I realize a lot of people have used
>these rigs and really would like some help. Therefore, my
>questions are: 1. would upgrading from my IC745 to the IC736 be
>a smart move?? and 2. would I get much by trading my TR-9000 on a
>newer model.

The IC-745 receiver blocks so easily that virtually any upgrade
will be an improvement. I'd go to a used IC-735, but the IC-736
may be Ok. I've heard complaints of noise in the AF stages of that
rig, however. There are a number of new rigs which have come out
recently which are also worth a look.

Ditto on upgrading the TR-9000. Either of your choices would
be *much* better. I'd look for an IC-275H, the 100 watts is
a help. I think an IC275H/IC475H pair is the way to go for
satellite. There are some compromises in the all in one IC821H
box, though it is much improved over the IC820H it replaces.

A word of advice, avoid the Kenwood TS790A. Kenwood wasn't
thinking clearly about satellite operation when they designed
it, for example you can't use the narrow filters in the subband
receiver, but that's the one you use when working satellite,
and the PAs tend to overheat badly. And don't overlook the
Yaesu FT736R, it remains a standard among satellite operators.
It's a bit long in the tooth, but it still does the job all in
one box. Its one main fault is that its output power level
is awkward. It is too little to operate the satellites barefoot,
but too much to drive commonly available external amps. And
it won't do dual simultaneous receive like the newer radios.
That's not important for satellite, but it can be for terrestrial
operation.

With PIIID scheduled to go up next spring, I might hold off
a bit to see what the manufacturers roll out for it. There's
bound to be a lot of excitement about the new satellite, and

I expect the manufacturers will have new models to tempt us.
That might bring a lot of gear onto the used market as people
upgrade, or the used market might dry up if a real buying fever
starts and people snap up any radio that'll work the satellite.
It's a toss up which way it might go.

2638. WTS Plate Transformer

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-15 00:00:00 UTC
From: John Lanza <kc7im1@c2i2.com>
Message-ID: <328C860A.67E6@c2i2.com>
Source record: 190756

I have a brand new Iron Plate Transformer, custom made by Peter Dahl and sized for my Henry Two K Classic Amp. Its primary winding is 220v and secondary winding is 4500v at 2 amps. This is what every Ham needs to built a Amp. This Transformer was never used, the wife keeps tripping over it so I must sell it.
$200. + plus shipping

He is proberly going to use it to supply Power and turn on the SGC tuner
when you turn on the radio. That is what I did with mine because if you
forget to turn off the tuner it will drain you battery.

2647. MFJ-1621 any advices?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-15 00:00:00 UTC
From: jq1tar@voscc.nagaokaut.ac.JP
Message-ID: <9611151130.AA19728@voscc.nagaokaut.ac.jp>
Source record: 190765

Hi,

I want to operate on HF in my small apartment room,so I need a small size
antenna which has efficient,and quite easy to match S.W.R. I found a rod type
vertical antenna with tuning box at advertisement in the JA CQ magazine.
That is MFJ-1621.
It looks useful for me, but I have no information about this.

Please answer me following questions, if you have any information about it.

1) MFJ-1621 can work in room?

2) Does it have a M-type(or other) connector due to connect with external
antenna. It means, MFJ-1621 contains a tuning box. The tuning box is able to
provide a simply antenna tuner?

3) Where could you QSO with in use a MFJ-1621?

4) Do you have any information about any small size antenna due to use
in these cases?

I enjoyed DXing about five years ago. But now, I have a few activities on
HAM radio because of I live in a small room which cannot buid up antennas
outside.
I will operate 100watts or less mainly CW.

So, waiting your any adivices.

How about another suggestion for those planning on buying equipment through Internet ads? VERIFY THE MAKE AND MODEL OF THE ITEM ADVERTISED WITH THE SELLER. Readers may remember my previous posting where I mentioned I was considering purchasing a speaker/mic through Internet. I also mentioned that I was a rather satisfied Internet shopper. Well, I purchased the speaker/mic that was often advertised (along with some batteries) here as well as other rec.radio.amateur.* forums. The model I received was NOT the one advertised, but rather a much less expensive one. It works just fine, but had I known the true model, I would not have purchased it since I already have one of slightly better quality.

So, I would again stress --- make sure what is being sold/purchased is exactly what's advertised. Happy shopping.

Larry, I have been using a TS870 for about a year mostly on 40 CW and
really love the radio. I will warn you that it will take some time to
get used to using it and to get the correct settings. There was a
fellow who published a file of SSB parameters about a year ago and I
can try to find it if you are interested.
The one disadvantege is that it doesn't have a way of inputing a
sperate receive antenna (like a beverage for 160).
I feel the 870 is a very competative radio

2663. Slingshot/antenna advice

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-16 00:00:00 UTC
From: ashworth@hevanet.COM
Message-ID: <2.2.32.19961116155259.006d7c6c@hevanet.com>
Source record: 190628

I have been following the slingshot/bow-arrow discussion with interest. I have been using the slingshot method here in Oregon for years to place lines over our 100'+ fir trees. Most of the methods described over the past few days work well ... sling shot, bow and arrow, etc. The piece I would add, learned from the school of hard knocks, is to use a 5-10 foot leader line between the projectile (fishing weight, arrow, tennis ball, etc) and the main monofilament line. This ensures that if you get the projectile caught in the tree ... (usually wrapped around a limb), you can pull the monofilament line and it will break at the point it's hung, versus half way up the tree. This has the added benefit that when the leader breaks, the weight will often fall to the ground. This scheme will prevent having long, unsightly strings of snagged monofilament line hanging down the side of your trees.

BTW, if you have the 1996 ARRL Handbook, I describe my approach on page 20.7

Enjoy ...

Dennis, K7FL

As new Drake SW-8 general coverage shortwave receiver. has 1 1/2 yrs
remaining on extended warranty. (transferable to new owner).
Box/manual/power supply. This is one of the last ones before they
started producing the model with the selectable sideband sync feature.
I find little difference between using USB/LSB to copy AM signals
instead of sync detection. Will sell for $425 shipped in 48. Will
consider the timewave DSP-599zx or JPS NIR-12 in trade. Please email
for more info.
thanks

2670. Fixing the antenna connection on an Icom u2AT HT, what I did:

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-16 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseE0y8u3.G12@netcom.com>
Source record: 190635
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I've had trouble with the antenna coax connector on my Icom u2AT HT. The connection from the center conductor of the coax connector to the internal circuit board keeps breaking loose. Soldered it before, but it broke again. This time, I made a pair of wire connections shaped like "7"'s from the board to the center conductor. Then I got out the hot melt glue gun and squeezed a glop of hot melt glue around the base of the coax connector to help take some of the stress of antenna wiggling off the wire connections and be absorbed by the hot melt. (I tested the hot melt for RF work by placing a stick of hot melt in the microwave and it didn't get warm or anything when "nuking" it). The "7" pattern of the wire is also done to give some flexability when the antenna does get wiggled. A pair of "7"'s to reduce inductances.

It was a real pain to get under that RF board to solder those loose wire connections to the coax connector. Hopefully, the above will solve this problem of broken antenna connections.

The hot melt appears to have no RF signal impact.

2671. FS: MFJ 941 Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-16 00:00:00 UTC
From: timcook@erinet.com

MFJ Model 941 antenna tuner 300W, with antenna switch on back.
SWR/Power meter (30w + 300W ranges) very nice condition, only
difference from original is the inductor knob is not original, but
looks good just the same. I have the manual for it. will ship in 48
for $45. email for more info

2672. Re: FT50R FREEBAND MOD WORKS on ALL

> actually there for.

It is obvious (once removed) that the "resistor" was installed for the purpose of restricting access from the bands that the radio was not type accepted for or may not meet all of the specifications desired by the manufacture or user.

> It also amazes me that people would actually go to such lengths to
> listen to cell phone calls and have an unusable transmit capability
> while at the same time voiding the warranty of the radio.

I am happy to amaze you but cellular is a by-product of this mod and for many, I doubt, the purpose. Sorry, but if you had your hands on one of these radios you would find that most of the transmit capability is usable. Also many manufactures allow and recommend certain modifications be done by the owner/operator. Probably not this one though. :) It is only one step from being the MARS/CAP mod as far as hardware goes anyway.

Before you comment negatively you should know the Mod or the product that you are talking about. The after mod specs on this radio prove that it may well be very capable on other than HAM bands. Responsible persons will not use the radio unlicensed or in a way that will interfere with other users. While we both could discuss the finer points of the regs pertaining to "Type Acceptance", it should only come into play when there is misuse by the operator or interference by the radio/operator and not possesion or modification.

If you doubt any of the information pertaining to this radio or the modification buy one, modify it and find out. Take a chance, be a little less conservitive. Get a life . . . oh sorry that was your line.

> Get a life people!

Really, have a good day and don't sweat the small stuff.

BTW a friend of mine calls the radio "That James Bond" thing.

Hello.
I've just updated my FTV program, which does FAX & SSTV using a SoundCard, to decode Baudot using the same (FM) demodulation engine.

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud rates are automatically set following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

(5) I wrote it, and I love it - I myself can't believe it works so well!

Download your copy of FTV from my web site, at:
http://www.geocities.com/SiliconValley/2504

System requirements, and the standard features of FTV are described in the following page:
http://www.geocities.com/SiliconValley/2504/ftv.htm

By the way, AM signals from low orbiting weather satellites are also decoded - no extra interfaces needed. Demodulation mode is user selectable in software.

Hope you all have a load of fun receiving 'words and pictures' - I hope to get some feedback !

All the best from Brian, 9H1JS, on the Island of Malta.

The filter should drop the S-Meter reading by 1-2 units no more. If it
drops more then the filter could be bad (probably not) or the carrier
oscillator misaligned.

Has anyone that owns the FT8000 and the ADMS 2C has had it work yet? I have been waiting for two weeks to program my radio for this software to become available and it doesn't seem to work.
I get ERR or it defaults my existing memories (entire radio). I have the FT50R and the ADMS 1B and have had no real trouble with it. Has anyone got it to work yet? If so what did you do? What were the conditions? BTW whenever I choose Merge file it ignores me. Maybe it doesn't like me. I think that this program or the integration is not yet ready for prime time. Any help or insight is welcome.

He is (you are) 100% correct. This is one fine radio and besides all
that check out http://members.gnn.com/hca/ft50/index.htm for more info.

2696. Electronics Directory

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-16 00:00:00 UTC
From: Todd Peterson <elab@netins.net>
Message-ID: <328EA307.6CEC@netins.net>
Source record: 190661

Greetings!

E-LAB Digital Engineering, Inc. is pleased to make freely available our new
Electronics Internet Resource Directory!

This directory is a collection of many internet sites of use to
electronics builders, designers, and engineers. It is divided into
40 categories, with each category containing many hot-links to companies
and/ or web pages containing information on topics from Compilers to
Code Examples to Components Distributors.

The directory is available at http://www.netins.net/showcase/elab
You WILL want to set a bookmark!

We also invite you to check out our products, such as our new line of
integrated circuits for embedded design.

Thanks,

Todd Peterson
E-LAB Digital Engineering, Inc.

I'd like to find three of those cool Vertex clips for my 50's packs.
Now I just need to find them. Ideas?

Matt

--
First they came for the hackers. But I never did anything
illegal with my computer, so I didn't speak up.
Then they came for the pornographers. But I thought there was
too much smut on the Internet anyway, so I didn't speak up.
Then they came for the anonymous remailers. But a lot of nasty
stuff gets sent from anon.penet.fi, so I didn't speak up.
Then they came for the encryption users. But I could never
figure out how to work PGP anyway, so I didn't speak up.
Then they came for me. And by that time there was no one left
to speak up.

Fortunately Radio Shack here in the states carries both items you
mentioned. The power plug is a 4.0mm and they just started carrying it
this year. You have to make the cable yourself but it is for pennies
compared to what Yeasu wants for them. The SMA to BNC connector is also
lately carried by the shack.

Hi Tom here...

I have 1 FT-101E with nearly new tubes [140W out 10M] -
CW filter, mic, box an manual, All in working order.... 10 - 160M
On a 1 - 10 its a 9, 9+ $350.00

I have 2 Ft-101EX's in real good shape as well [8 - 9] ; one with
160M & 1 without... All in working order, with mics manuals and
about 130W out... $300.00 each [they were back-up rigs]

Have replaced 101E with 1000MP an looking to replace 101EX's with
other solid state rig [FT-990 757 ect.]

Will consider trade on any Yaesu 757, 747 or similar 100w solid state
rig. Will also consider TS-50, 140 or similar rig

I want to have all rigs 12vdc for emergency use, field day & such...
Since I have 12,000 Amp Hrs of 12VDC at hand with Solar charging system.

Tnx De Tom - KD4QHH

A while back I posted a want for some crystals for my old IC22 2M rig that I really needed to make it useful again, Marvin Jones, W3DHJ replied to the post offering to swap the ones I needed for some that he needed. Only catch was that I didn't have his needed freq's. I offered to buy the ones he had, and asked him to let me know what he wanted for them. After a few days I was surprised to get an envelope from him with the crystals inside, and a note saying "enjoy!".

Some times when you get disgusted after reading the flames about 'Net scams, a real live ham turns up and brings back the things I remember about hobbies from a long time ago.
Many thanks to a real gentleman, and a real ham! The 22 is up and running fine.It might even provide the incentive for the XYL to get her no-code, as it is not quite as intimidating a little rig to use.

I would not buy the FRS radio at Radio Shack. You can buy virtually the same radios (made by Motorola) from some of the Sporting Goods catalogs like Bass Pro Shop for $50 less per radio! The RS models are real low end (I think it was Gander Mountain that had them for $99 (RS sells them for $179 and the better model was selling at Bass Pro Shop for $129. All made by Motorola.

Scott:

I was confronted with the same dilemma in a Jeep Wrangler. When I finally found a spot that fit, I couldn't see the display because I was viewing it from the wrong angle and it looked blank. The LCD displays are usually designed to be viewed from the top - down, at about a 45' angle. I was trying to view it from the bottom up, at the same angle...no go.

I recently bought a YK-88C filter for my TS-130se HF rig. After installation, I noticed that the filter attenuates the signal quite a bit. I'm talking from a volume control set at 2 before the filter is engaged to about 8 or 9 after the filter is engaged just to hear anything. Is this normal, or did I get a bum filter? Anybody have any experience with this? Thanks & 73.

Hey what's with all the New York bashing. Please never compare what other states have to New York, nothing comes close, never has and never will. Besides you people are absoultely wrong about HAM stores in the New York area, Long Island has a half a dozen.

If a "type" of store exists somewhere in the country, it exists in New York. You have to realize, that comparatively, Hamming is a very small hobby. If New Yorkers aren't actively doing it, then neither is anyone else.

This hobby is more widespread in areas of the country that have little entertainment to offer. New York has everything. Oh, and you are wrong about the crime, we are leading the nation in crime reduction.

The FT50 has a common coaxial plug on the side that accepts 6-16V DC
you don't need anything special. Perhaps you're thinking of something
else.

Source record: 190718

Hello to the group. I am having a problem with my FT8500 in a mobile installation. The head is remote mounted and what is happening is that whenever I go over a bump, the display greys out on me. The radio still works, but the display cannot be read. I have checked the remote mounting and everything seems to be in order there. Has anyone else experienced display problems with the 8500? Any suggestions or solutions? I have not tried it mounted back on the body of the radio as it is not a very simple task to remount it.

Thanks and 73

Dear fellow hammates,

as an owner of gorgeous FT-50R, I very soon noticed (just as many of you, too) that Yaesu's originally shipped rubber duck is the right one to use if you don't wish to be disturbed by weaker signals and distant repeaters - it sort of appears to me that it's specially designed to filter them off...
Well, the question is: what is the best dualband SMA antenna? I've heard and read many opinions on the theme, but still am not fully convinced that there's only Comet SMA-3. So please could someone either convince me or recommend another one? (btw, what's the difference between Comet SMA-2 and SMA-3? does Comet have any homepage?)
Thanks much!

Mikhal F. Kresliik, OK2XHX

> I haven't been able to switch bands once one is stored.

Follow steps 7 through 11, but on step 11 change the radio to A1. This will default the radio but
you can reupload your original data providing you are using the ADMS software

7. Turn radio off
8. Press down and hold the tuning knob and lamp button while turning on the
radio.
10. The vfo should display 144.000 Press FW.
Power off.
11. Powerup with lamp/ptt/knob held down. It should now be in tune mode with something new (BAND= A 1) change it pressing the knob for 1/2 second and then turn the knob to FREE. (BAND=FREE)

Hope that this is what you were writing of

Good point. Carrier oscillator alignment can have a heck of an
effect on the performance of the filter in line. Not hard to fiddle
with, either. I have had that problem once with my Kenwood TS 440.
Check your manuals.

Message-ID: <01bbd4cc$0d766360$6e1eb3c7@kiwi>
Source record: 190535

Hi folks,
I have two AEA PK90 TNCs in unused condition, but several years old.
I have no DC supplies or cables, and only one manual. They both work fine.
Someone might like to buy them BOTH, because:

The PK-90 is a commercial grade TNC with a number of special features,
including ENCRYPTION. They also have fully specified environmental
performance,
such as 0 to +55 deg C operating, 30,000 ft altitude, vibration and shock
etc.

The PK-90 has up to 9600 baud capability using the modem disconnect header
and 1200 baud using
the internal modem. It has KISS and Host Mode, and can (so the manual says)
be used for SMR/Trunked Radio. It is also fully remote controllable and
supports AX25
levels 1 and 2.

Questions and offers (preferably for both units) to
as149@detroit.freenet.org

Am I mistaken, or isn't the FT-8000R able to receive DC to daylight
(except for cellular) out of the box?

I am considering purchasing one, and this information would also be
helpful for me, too.

Butch ...

The radio is fun to build and when completed looks pretty
impressive. It appears to work well. I use it mostly for packet, and a
jack is provided for that purpose. The most damaging complaint I have is
that xmod performance is not very good. Receive sensitivity is so-so
(but usuable). The transmitter is GREAT!!! Lots of power and modulation
is very good. Using the unit is a lesson in simplicity. I feel that it
was a good buy.

I am selling the following:

Drake TR7 (s/n 6159):
Including WARC board, fan, and Shure Hand mike. All very clean ... no dents, scratches. Factory updated with the latest mods; The power supply is home built, clean construction, uses the Drake regulator board, and is designed to deliver 30-35A. The operating manual for the TR7 is included, as is a schematic diagram for the supply. Both the radio and power supply have performed flawlessly for 12 years. $590.

Drake MN-2700 KW Tuner:
Matches the TR7 and includes the manual.
Excellent condition: $285

MFJ 722 CW/SSB/Notch audio filter:
Very clean, and really makes a difference on both CW and SSB: $50

MFJ 482 Grandmaster keyer:
4 CW memories ... works great. Very clean: $75

Telex CM1320 headset/mic.
Used for several years with my TR7. Works great and have received good audio reports.
Looks and works like new: $50

Hi everyone.
I own a Alinco DX70T, and I noticed that Alinco just upgraded to
the DX70TH. I understand that the DX70TH has 100 watts on 6 meters.
Anyone know if the DX70T can be upgraded to the 100 watts on 6 meters?
Could this be done just by changing the final for 6 meters? And if so
will it be easily done? I'm sure there are many DX70T out there. 73

Out of the box is 110mhz-550mhz, 750mhz-1300mhz minus cellular. I have
an FT50R Ht and modified it to receive well beyond the specs (no
software gaps from 50-999mhz and unbelievable transmit capability).
I love the FT8000 and the features. As far as the Ham bands it cover it
does an extremely good job. Outside of that, however, images and
intermod galore. Cellular can be found at 1150+ mhz.
Very little operation from the mic. (no dierct freq entry)
No DCS, yet. It seems the display can show it but I think it may be a
new board not yet available. CTCSS works well and the PAGE is a neat
function.
Large well lit display easy to use (once you get used to it)
Cross band repeat is fast and clear.
I am working on a $150-200 auto-phone patch for it hope I know enough to
get it done
Lots of features

Enjoy

> It is obvious (once removed) that the "resistor" was installed for the
> purpose of restricting access from the bands that the radio was not type
> accepted for or may not meet all of the specifications desired by the
> manufacture or user.

My point was the fact that the only justification in first removing this
resistor was that it appeared to be installed after the radio was built.

> I am happy to amaze you but cellular is a by-product of this mod and for
> many, I doubt, the purpose. Sorry, but if you had your hands on one of these
> radios you would find that most of the transmit capability is usable.

I have TWO of these radios. Bith were purchased when the radios first
were available in the US.

>Also many manufactures allow and recommend certain modifications be done by the
> owner/operator. Probably not this one though. :)

You are seriously confused here. No manufacturer has ever encouraged nor
recommended a mod to be performed after the sale. Most recommend against
it, in fact. Can you say goodbye warranty??

> Before you comment negatively you should know the Mod or the product that
> you are talking about.

See above!

>The after mod specs on this radio prove that it may well be very capable on other than
>HAM bands.

Wrong. Anybody with half an electronics minded brain can tell you why
this mod "works" and also why this rig will never be a capable performer
out of the ham bands. Filters, filters, filters.

>Responsible persons will not use the radio unlicensed or in a way that will interfere with
other users.

I won't even bother commenting on this one.

Scott:
I have a 1994 Ford Escort, and I mounted a Yaesu FT 2200 in the cup holder tray, in front of the gear selector (auto trans). I'm not sure of the size of the 8000, so I dont know if it would fit.
I cut two round pieces of wood that fit into the rubber tray insert. I mounted these to a sheet metal plate painted wrinkel black. I mounted the radio bracket to this plate. It is mounted so the radio angles up. It just fits when the selector is in park.
With this arangement, I can remove the radio in a matter of seconds.
I believe th 1997 Escort has the same cup holder arangement.

I have had my radio do the same only when near some highly interfering RF source like my 28.8 modem. I say this because where I connect for ADMS software use always tends to open the squelch no matter what the freq or pl tone is. Remember in order for the tone squelch to come into play the signal must have been strong enough to break the RF squelch first. You may want to check your RF environment or just turn-up squelch reactance

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-17 00:00:00 UTC
From: scederas@bellsouth.net
Message-ID: <328ec623.4265289@news.rdu.bellsouth.net>
Source record: 190588

I purtchased a IC-3230H from him via Fed Express. The radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

> 73 de Thomas

I measured the radio and here are the measurements: 5 1/2" Wide 1 5/8" Tall 6" Deep
(rounded off to the nearest/greatest 1/8")
The deep meausrement is from the back of the fan to the front of the faceplate not
including the knobs (add 1/2" for the knobs). Hope this helps as I have seen your post
a few times earlier but could not tell what you were asking.
The Wideband fuction of this radio has a serious flaw; while connected to a base
discone it receives imaging across the entire span. I havent put it in the vehicle yet
to see how much less sensitive it is to intermod and imaging. It is still a very fine
radio. Just thought you'd like to know.

I have that problem with my yaesu ft-530. When Tone Squelch is activated
and the normal squelch is all the way down, the Tone Squelch periodicaly
fails. I have no explanation for this phenomenon.

I was shocked to see that "the cadillac" brand of amateur radio would put
out such a faulty product.

> 73 de VE7MDL ....Erik.

I don't think it's American management philosophy to blame here, Erik,
it's that hams are (ahem) frugal. That's why the TS520 was such
effective bait.

And it isn't just Americans. I was born with one leg in Canada, and
there are a lot of cross-border shoppers.

But it isn't just ham gear that's turned into caca since the TS520, most
commercial electronics are plastic crap. Come to think of it, so are
most cars. Come to think of it...

Scotch Plains, NJ - Auction - Nov. 18,1996

The Tri County Radio Association is sponsoring a Ham Radio/Electronics/Computer and Equipment Auction to be held Monday November 18,1996 at the Willow Grove Presbyterian Church, 1961 Raritan Road (East of Martine Avenue),
Scotch Plains, NJ.

For a small fee, 10% of the total sale price, minumum $1.00 and a maximum of $10.00 sell your excess equipment that is cluttering up your shack.

Equipment check in will be at 6 pm.

NOTE: Tri County reserves the right to accept or refuse any item for sale. Open examination by buyers will be held until 7:30 when the auction will begin.

For futher information, call George - N2TMC after 6 pm at 908-245-0748. If you need directions you can ask any Tri County Radio Associaton member on the clubs 2M repeater(147.255, Pl:141.3 Hz).

Hi,

I've done this on the 1000D and though it is not brain surgery, it is a really tight place to get into. You have to drop the front panel which is connected by wiring that is too short to make it possible to get much of a tool into the adjustment caps. I don't have the repair manual or the radio so I can't help you on the details. I would suggest however that although Yaesu reccommends setting the lower edge of the passband to around 300 Hertz I would set it lower.....say around 200 Hertz or so.

Chuck, KE9UW

> going to be given to me free.

Not SO old! And, VERY good, besides :-)

Really! The 2SAT was introduced about seven years ago, and kicked off the trend toward really small HTs that hasn't faded yet.

The weak point is the internal nicad battery - it's too small to be of any real use, and if it hasn't been replaced recently, probably is dead anyway. Don't bother fixing it, just use one of the BP-8x series packs and forget the internal one - it sure doesn't add much weight ;-) Better yet, get a BP-80 shell for six AA-cells, and have the flexibility of rechargeable, renewals, alkalines, or AA-lithiums.

The 2SAT is also a pretty good little packet rig. Have fun - but wait until that ticket shows up :-(

Mark,

From the thread I have been reading, the bashing has been about Barry Electronics and not New York.

I live in Manhattan and I don't know of any good Ham radio stores close by. Barry's, in my opinon, is the worst. But if you know of a good store nearby, please let me know. I've been looking for two years now.

2795. Motorola AP50 a 2 meter rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-17 00:00:00 UTC
From: Frank Krozel <frankeia@netcom.industry.net>
Message-ID: <328F47EB.2427@netcom.industry.net>
Source record: 190607

A friend just faxed me information on a 2 meter rig from Motorola. It states the AP50 is 138-174 Mhz, 5 watt, available in a compact size, and standard size, available from a guy in California. The local Motorola dealers don't have a clue on this. According to the guy in California, it is type accepted (UHF is currently not).
It starts out at $249, with an alakaline pack. Seems like a neat rig. 20 channels, 5 wattt, DTMF, PL, DPL, LCD readout, and programmable from the front panel. At a local hamfest last year, I saw the 450 counterpart, but it was not type accepted last year. This was probably the CP-50, but quite honestly at a hamfest, I didn't remember all the details.
Anyone out there seen these radios?

Source record: 190610

I did not have an FT736R when I worked satellite two to three years ago, but I used a Mirage D-3010N UHF amplifier to boost my uplink signal to about 80-100 watts (the Yaesu UHF FT790 put out 25 w). I used a mast mounted 2M preamp, a Mirage KP2/2M, and used short runs of Belden 9913 and type N connectors. That combination, combined with good satellite antennas, worked well for me.

Good luck

>Hendrik

It's a great little HT. I sold mine last year only because I also had
an IC-24AT which is very similar, but dual-band. One nice feature of
the 2SAT is the internal battery. It won't power the HT for long, but
it is great for keeping it going if the external battery dies. Don't
worry about it being old, just grab it.

Yes, it means "You have a good dynamic range in your audio stages,
however I prefer no more than 3dB between maximum and minimum so I can
see the meter move higher".

Ignore them. If they can give a report like strong signal but weak
modulation on SSB they are bad reporters. If they say "You could do
with some more compression", then that is OK. Try getting a real RF
speach processor and set it up correctly. It will make a big
difference in weak signal readability compared to the standard
microphone and audio compressor.

Greetings...

I have one each 25B (25W 50-125MHz) and 25E (25W 400-1000MHz)
slugs for Bird Model 43 Wattmeter.

I'd like to trade one-for-one for any two of the following:

100A (100W 25-60MHz)
5C (5W 100-250MHz)
5E (5W (400-1000MHz)
1000H (1 kW 2-30MHz)

I'll even pay the freight both ways. I also have a meter and line =
section (sorry, no case)
to trade. If you've got the slugs above and more and want the other =
items, let's talk
about a CC-1 or Thruline attenuators or other slugs.

Here's my tip.. Get the one you like the looks of. Really! and look at ease of programibility, output power,
and ctcss decode included? size is also a nice factor to consider.

I have found that MOST of the brand name radios on the market today are mostly equal in performance. I have
been equally pleased with Kenwood, Icom, Yaesu and Alinco. I have no experience with other brands but I'm sure
that if you buy the radio that you are comfortable with, you will be pleased.

> one to the other.

Different section for VHF-FM. HF FM is actually a bit narrower at
+/- 3.5KHz. There are separate deviation controls for each. However,
once set using the Bessell Null Technique, no adjustment of deviation
should be necessary.

I run mine with the mic gain at 8 and the compressor on for HF. The
compressor level is in the default 12 o'clock position. I get consistant
excellent audio reports on both HF/VHF SSB and VHF FM.

I am looking for any mods or info on the ICOM IC-701 HF transceiver.

Looking for expanded frequency mods, ICOM service manual or notes, computer control info, power output, etc.

I know that alot of mods use to be around for this radio, especially in older magazines like QST. If you remember seeing any or have some old magazines that you could look over, please email me if you find any mods. The expanded frequency mod was the most popular one.

For anyone how does own an ICOM IC-701, I have listed the date of a magazine below for a simple computer interface. Control your IC-701 rig right from your computer just like the new HF transceivers.

Hello Butch:

I also built the 2 meter Ten Tech. It was incredibly fun. I agree that th features are limited, but I almost never use 99% of the features of my other 2m rigs. As has been stated, the sound and transmitter are really excellent. The receiver was not the best out of the box, but you can play with the coils and make it match the best Jap stuff out there.

BTW: I called TT to see if they would give the source code to the CPU, as I wanted to reprogram it to add scanning. They would not give it to me, but said that they are working on a retrofit to existing rigs to add scanning! This is to me the only feature missing that would make it a real contender for the Jap stuff.

Have fun!

Hani ...

Don't sell your 690. The Icom is a great rig for the price (I am an
ICOM fan), however, the receiver is not as good as the 690 Kenwood (or
the 738 ICOM). The xmod, rejection, etc are not as good. It is still a
great unit for the money. You get a lot of features in a very small box.
As in everything, there are tradeoffs.

> John, K7JY.
>
>
John ...

Were it not for the ANC-4, I would be out of ham radio. I live in a
condo. I also live near Ft. Deitrich (biological warfare, CIA) and have
LOTS AND LOTS of noise sources. The ANC can only handle one noise souce
at a time. With power line noise and TV birdies, I found a setting where
I could set between the best setting of the two and knock them both down
a fair amount. The fort has recently began transmitting a 5/6 Hz. signal
of over S9. I can filter this out, but then the power line noise and
birdies come through. I guess I'll have to buy another and cascade them!!

The secret of making these things work is the noise sensing antenna.
This antenna must be oriented and long enough to produce a noise signal
without receiving the wanted signals. This signal is then amplified and
the phase changed 180 degrees and combined with the antenna input,
cancelling out the offending signal. When you phase out the noise, many
times the S9 signals on the band will also be reduced in level, since
they are being heard by your noise antenna. The weaker signals are
untouched. In all the unit is effective, but there ARE limitations as I
mentioned above.

2833. Info on Icom 735

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: sperron@newcomm.net
Message-ID: <3290c79a.391920@news.newcomm.net>
Source record: 190387

I just purchased an Icom 735 transceivers from a co-worker,
and since I'm relatively new to this hobby, I would like to know where
to get extra information on this transceiver, like computer
interfacing, mods and tricks.

Thanks

Steve VO1SLP

I'm getting out of HF. This station is about one year old.
Equipment is like new - perfect appearance, function and rarely used
(really!). Got S-9 from Japan 2 or 3 times. All this equipment comes in
it's original boxes and protection (excepting R-7).

New Price Full Station

Kennwood TS-870 $2,299.95
SP-31 Speaker $99.95 Perfect match for 870 in size, style.
MC-60 Mike $139.95

MFJ-949-E Tuner & Dummy Load $149.95 Works well!

Palomar M-840 LCD SWR Meter ~$175.00 Lew McCoy Recommends! Makes
tuneup easy.

Bencher BY -1 Iambic Black $79.95 Never used for QSO
RJ-1 Hand Key Black $74.95 Never used for QSO
YA-1 Lo Pass Filter $59.95

Cushcraft R-7 Vertical $379.95

Plus all in shack cables 0.00

$3,459.60 $2,750

Yes, I have integrity. Please contact Dave Kay at

kham@halcyon.com

Anyone notice on the UHF band, there seems to
be a ringing like sound on strong signals,
sounds a lot like when a VCO is about to
unlock, in fact it sounds almost the same
as when the battery voltage gets around 4 volts.
It is really noticble when a xmtr keys and
un keys.... I've only noticed this mainly
around the 440-465 mhz area....
Any thoughts.... Duane Park

All that the simple Kenwood TM-V7A flyer says is that it has AM Aircraft Receive... it doesn't even quote how wide the two intended bands of operation are, let alone any other "wideband" capabilities. It is all pure marketing hype about the color of the display, microphone keypad backlighting and the menuing software, but little else of consequence. Somewhere along the line they forgot this was supposed to be a radio!

I wish the manufacturers would go back to making REAL amateur band radios that work on the Amateur bands and are free of intermod-related problems. My own opinion is that if you want or "need" something else, then buy something else (maybe a scanner?).

Trying to shoehorn DC-to-Light capabilities into Amateur transceivers has only resulted in radios with lousy performance on the amateur bands. Somewhere along the line, Amateur transceivers became scanners and computers with cheezy radios attached. Radios 10 to 20 years old simply out-perform the current gems in terms of receiver performance. If you can't hear 'em, you can't work 'em!

* Crossposted from: SCANER_GROUP

The NEWCASTLE SCANNER GROUP was originally formed in 1990, to cater for scanner enthusiasts in the Newcastle, Central Coast and Hunter Valley regions. We also cater for SHORTWAVE LISTENERS World Wide with what is believed to be the lowest membership rates in Australia and the South Pacific!

What can we offer?

* Bi-monthly Newsletters (yes, plural): We produce TWO bi-monthly newsletters - one for the Scanner Division and one for our Shortwave Division. This means that we are not trying to cram information on HF, VHF and UHF frequencies into one newsletter! Whilst our newsletter may not be as large and fancy as some others, we don't list endless loggings of what you COULD have heard TWO months ago!

* FREE help and information: Whether it be Scanner related or Shortwave related, members can obtain totally free help or advice, any time.

* FREE Frequency information: Many scanner frequency lists, and even HF lists, are out of date before you even get them, so why waste the money?
Members can obtain FREE OF CHARGE information on the VHF/UHF frequencies used by local emergency services and other interesting services, or lists of Australian HF frequencies or updates on the HF scene, all upon request.

* Encouragment Awards: NSG has several awards available to Shortwave and Scanner enthusiasts for various accomplishments. These are aimed at getting
enthusiasts that little bit more involved. Non-members pay a small fee for
the issue of each award, but members receive them FREE OF CHARGE.

* MORE TO COME! As new members join or suggestions come in from existing members, we will add to the benefits of membership. The main idea of this Group is to allow enthusiasts to SHARE information and findings amongst each other - in other words, send in your latest findings or contributions to share so we can keep the newsletters, etc, full of information for everyone to enjoy.

Want to know more?

Get in touch! If you have questions or doubts, let us know and we will help you in any way possible. We do not charge anything for help or advice, even for non-members. NSG is a NON-PROFIT organisation, so all money raised from our low membership fees goes straight back into the

Group.

From: boritz@cs.ubc.ca
Message-ID: <56qcrm$i59@cascade.cs.ubc.ca>
Source record: 190406

"E. Scott Sykes" <flashnet@erols.com> writes:

>I am happy to amaze you but cellular is a by-product of this mod and for
>many, I doubt, the purpose.

Excuse me for being dense, but I am fairly new to the hobby. What other purposes might someone have for making these mods? I see these messages going back and forth and listening to cellular calls seems to be of primary interest to most people. I have not bothered with any of these mods because I really don't care to listen to cellular calls. Your message has piqued my curiosity and am genuinely interested in finding out why I would want to make some of these mods if listening to cellular phone calls is of no interest to me.

>Responsible persons will not
>use the radio unlicensed or in a way that will interfere with other users.
>While we both could discuss the finer points of the regs pertaining to "Type
>Acceptance", it should only come into play when there is misuse by the
>operator or interference by the radio/operator and not possesion or
>modification.

I don't understand why I would want the ability to transmit on a frequency that I am not licensed to transmit on. In fact I would be reluctant to make such a mod because of the chance that I might inadvertently interfere with other communications. What I mean is that PTT might get keyed accidentally if the radio is in my pack and happens to be on a non-amateur frequency.

2856. FS: Kenwood 721 and/or 731

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: jbest@worldnet.att.net
Message-ID: <3290f946.8741656@netnews.worldnet.att.net>
Source record: 190431
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have for sale a Kenwood TM731-A or a Kenwood TM721-A. Both rigs are dual band, 144/440. I am asking $375 for the TM731 and $350 for the TM721. Both rigs are in great condition and come with mikes and mobile brackets.

2857. TEK: WTB TM500 items

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: Richard Hager <rhager@millcomm.com>
Message-ID: <328FEFA7.E84@millcomm.com>
Source record: 190432

Hello!

I'm looking for a few bargains to fill out my home shop a bit.

I have an empty TM506 just crying out from some cheap plugins. I'm
looking for the following TM500 stuff:

Prefer Alternative

AM503 w/A6202 current probe. 6303 of interest too, but not as much.

DC510 DC509 or DC503A

FG504 FG507 or FG502

PG502 PG508 or 507

PS503A PS501-1

SC503 SC504 or any other SC5xx scope

SG503 SG504

TG501

SWxxx can't remember the number, but it's an older 1-400mhz sweeper

Any Tek probes, GR874 accessories, or 067-xxxx-xx items, would also be of interest.

Let me know if you want to clean out some of this older stuff. Thanks!

Richard

PS: I don't have any TM5000 frames, just TM500. But I'd consider getting
5000 series plugins also, if you have a cheap frame for them.

2860. FULE PUMP QRM/YAESU 8000R MODS ET AL

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: 100670.3637@CompuServe.COM
Message-ID: <961118085118_100670.3637_EHK69-1@CompuServe.COM>
Source record: 190435

For Fuel pump noise:
HF rigs, and VHF rigs to a lesser extend suffer from pump noise in a mobile installation. To solve, connect a .1uf capacitor across the fuel pump terminals, right outside the fuel tank. Be careful when dealing with this area, especialy if youi intend to use a soldering iron. Better get your garage mechanic to do the mod. This will fix the problem. You may also want to wire 25 bifilar turns of 18gauge insulated wire over a large toroid and use it to connect the power to the rig. This will clear whatever else noise remains.

For Yaesu 8000R mods.
General transmit (140-174, and 410470). Enter frequency 1234.560 on the right side. Power off. Power on again.
Am mode manually toggled. On the lft side, if you press F/W followed by VFO, you get AM mode (110-280). This enables AM mode on the UHF aviation band.

Intermod. The wide receive of the radio leads to extensive intermod where signals get picked up everywhere. This can be solved by using S meter squelch. Set it to 7 or 9 and you will only get valid transmitters.

This is a great radio with many features, of which the auto search and store is by far the best. I was in Tucson for a week and this way I tuned in all the repeaters being used in the area giving my instant access to other hams.

Best,
Peter, KC1QF

There was a big discussion on the BA group a few weeks ago on this.

A couple people reported it as working fine, and a couple reported it as
not helping at all. Great, huh?

I got the feeling that it doesn't work on all noise sources, but you
wouldn't know until you got it whether it works on yours.

Good luck. I have S9 noise every night now.....

Source record: 190437

I purtchased a IC-3230H from him via Fed Express. The radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

It helps me and quite a few other hams I talk to. It takes some learning how to orient the noise antenna and adjust the phase and gain. The book gives lots of help. I use mine along with the noise blanker and get super results most times. This summer I wouldn't have been able to hear during the day if not for this ANC-4. There is no doubt that it works well but there may be noise from several sources or hams with little patience that the unit won't work for them.

2868. Yaesu FT50R CTCSS question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: lips.drunen@tip.nl
Message-ID: <E12Ku9.6n1@tip.nl>
Source record: 190443

Hello,

I have got a question about the CTCSS Tone from the Yaesu's FT50R.

According to our local repeater sysop, the CTCSS tone from my
transceiver is way to loud. Due to the fact that it is so loud
the repeater will sometimes not respond with lowering the
squelch level.

So my question is if someone knows how to make the CTCSS tone
less loud.

If you know the answer please give me a reply, no follow up
message because I am not reading the newsgroup that much.

Thanks in advance.

Best regards,

Roger.

Source record: 190444

Dear OM,

I think you are talking about a FT-227R 2 meter tranceiver.
It has no battery for a memory or so.
Only when the 13,8 power is connected, it holds the last used frequency whe=
n=20
you
switch off.
But when you disconnect the 13,8 power source, it start at the=20
centerfrequency when
reconnect the power lead.
In Europe this is 145.000 Mhz.
I hope it is clear.

Best 73,

Jos van Gelder,PA3ANF Netherlands. (E-mail :Jos.vangelder@ohmeda.boc.com)

I have been told, with some emphasis, that trickle chargers let power-line
spikes get through. I.e., you should not even be receiving with the
charger connected; you should always have the rig disconnected from the
battery when the battery is being charged.

I am open to other opinions on this.

2873. TH-78A Problem

Model: SWF 5-40
Manufacturer: Karl Braun Funktechnische Gerate DL, Nurberg

I know some hams used it with a Collins KWM-2 to enhance performance. Any information about it will be welcomed.

Please, e-mail any information to:

eb5agv@ctv.es

Thanks!

2882. Entry-Level HF Radio (FT-840, IC-707, FT-600, DX-70)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: lui@netcom.com
Message-ID: <luiE12vCB.95t@netcom.com>
Source record: 190457

I just passed Element 1C last week and upgraded my license. I've only done the VHF/UHF repeater thing up to this point and have played around with packet and done a little listening to HF on a HeathKit HW-8. I'm looking for a good entry level HF radio, since I'm not sure how what I really want yet.

I've been looking at the entry level HF radios from the various manufacturers. I'll probably start mostly with CW and a little SSB, and maybe some RTTY in the future. Does anyone have any experience or suggestions?

I may want to take the radio mobile occasionally (when I'm at home I spend most of my time with my wife and son). What is a good mobile HF antenna system?

I also live on a townhouse, so my space is somewhat limited. I was planning on putting up a dipole and using a tuner. Are verticals really bad because of the polarization and noise? I think I have enough room on the roof to put up a 66 ft diple (like a Van Gorden Shorty).

What about 6m? The DX-70 looks like a really good value on paper, but I turned the knob on one in the store and wasn't particularly impressed. :(

While working Sweepstakes this weekend I was struck by the wide range in audio quality of the voice keyers I heard. Some had excellent fidelity and some were largely unintelligible.

Didn't want to take the time during the contacts to ask what was being used.

Would appreciate hearing recommendations for/against specific models based on personal experiences.

What's the point....it can't be so bad that you wouldn't accept it if it were free!

In any case, it is a neat little rig, but clearly one of Icom's lesser successes. The receiver is much more subject to intermod than pretty much any other Icom rig. Battery life is poor. However, all you have to do is have extra batteries and move to North Dakota and you'll be fine.

Definitely a super free radio.

This brings up something that happened to me. My first attempts were to use tennis balls with packing twine taped to the ball. I would throw the tennis ball over the tree limb I wanted my wire to go to, however my aim was poor and I missed many times. On several attempts, the twine broke leaving the tennis ball hanging 30 feet up in the tree. The tree ended up with at least 3 tennis balls hanging in it. My wife noticed and mentioned that she always wondered if there were male and female trees and now knew that that tree was a 'male' because of the balls (tennis) hanging from it! The previous appender is really right. I know use 15 lb fishing line and a hardball with an eyescrew. If I go over the wrong limb or get wrapped around one, a good hard pull will either break it or pull free from the eyescrew.

What an offensive, bigoted statement by some old fart apparently still
living in the WWII era!

It is not only offensive, but it is ridiculous. "There's a 99% chance
you'll be sending it back for warranty repairs to fix"? What kind of
statement is that? Since it can't possibly be true, is there any meaning
to it at all?

I suppose the solution to the "quality crisis" is for good 'mericans to
buy 'merican, regardless of our own historical "quality crisis" or "cost
competitiveness crisis" or "market awareness crisis". Yep....lets slap a
heavy tariff on the "Japs" and stop the crisis!!!

One guy's bad luck and he goes nuts trashing the only viable source for
decent equipment....and offending a whole race of people while he's at
it. If you don't like the "japs", stick with your crummy Ten-Tec...or
buy one of those "Patriot" rigs that look like they have been assembled
in someone's garage.

This what I have liked about GE. The old MastrII or MastrPro is still
hard to beat. Even the MVP series is good. If you could still get a
synthesizer to put on one would be perfect.

2899. Standard Warrenty Service

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-18 00:00:00 UTC
From: mead@dg.com
Message-ID: <56q69d$5fv@dg-rtp.dg.com>
Source record: 190474

I sent my Standard 5718DA off to get serviced. I own three, and I don't know if the one I sent off was supposed to be under warrenty or not. I included a good description of the problem and my return address and phone number. Six days latter I got the radio back, fixed. No questions, no problems, no hassel. They may be more expensive, but with service like that I think they are worth it.

2910. AKD Target HF 3 Communications reciever ?????

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-19 00:00:00 UTC
From: Jonathan Bowes <Bowes@ceu.cz>
Message-ID: <3291D20C.3F4C@ceu.cz>
Source record: 190329

Dear all,

I'm interested if any readers of the British magazine "Shortwave Magazine" have had any experience with, seen, bought, know, anything about this new communications reciever released by the British firm AKD ??? I read the review in the last months edition and its sounds an incredible piece of gear for only 150 GBP !!! I'm interested to know about any contacts with it. It certainly got me interested in getting rid of my far eastern cheapo fro a good bit of British hardware.

Thanks all.

Jonathan Bowes

JB> 1N2071 diode has gone belly-up. Anyone suggest where I can get
JB> 1N2071 diodes?

Hi John, the 142071 can be replaced by any 1 amp 600 volt diode. You
can buy 1N4005 diodes from Radio Shack, part # 276-1104 or buy them
from Mouser Electronics mail order. 800-346-6873 or their web access
http://www.mouser.com You should get their free catalog. They can sell
you 8 - 1N4005 diodes for what Radio Shack would charge for one. No min
order and very reasonable shipping cost policy. Personally, I would
replace all the diodes in the power supply and I would upgrade to a
higher voltage ratings such as 800 or 1000 volts or 1N4006 or 1N4007.
Mouser adds 583 to the diodes # such as 583-1N4005/6/7. If you call,
tell the person the parts of interest is on page 11 of catalog #588

Hi Everyone,

I just purchased an Icom 706 and I'm interested in doing some portable HF operations. I wanted to get some tips.

I'm looking for power sources. I was thinking of using several gell cells to get a 20 to 30 amp hour rating. Does anyone know any good sources for gell cells? Are sealed motorcycle lead acid batteries OK?

What about antennas and tuners? I would prefer to use just a random wire antenna. I was looking at the SGC SG-230 auto tuner, but I might even go for a small Vectronics tuner that can handle long wire. Is the longer the antenna better or should I cut the wire the to be 1/4 wave of the band which I plan to operate on?

Any pointers would be appreciated. Any references to articles in QST, CQ, or 73 in the past year would also be great.

Thanks,
Kory

>Tube type hand held?

But of course. Didn't you ever watch the TV show "Combat" (or re-runs).
One of their WWII portable radios was in a field pack, but another type
literally WAS a tube type hand held... a LARGE handheld, but a handheld
radio nonetheless.

But for FREE????? Well, I did get a handheld radio "almost" for free.
It was a handheld receiver only (scanner) that covered the 2 meter band
(and the 160 MHz range public service band) for only $5... AND, it even
came with some crystals for the four channels. Unfortunately, none of them
were ham frequencies.

Tell them like it is...

Remind them that: those military radios were ment for the military,
not for use on the ham bands...

Commercial rigs were meant for the commercial freqs, not the local freqs.

And the list goes on...an on....

It doesn't matter why a person wants to do it <???> Its their thing...
And if the manufactures' didn't want you to do it; you wouldn't be able
to... REMEMBER the HTX-202...

You don't think that is a accident, that these rigs can do what they
can...? They are built for these purposes, by the manufacture...

You don't want the rigs to do this: get on the manufactures...

Wake up folks...

ISTR it was a boating accident about 20 years ago. I think it was a
fuel vapour explosion.

I think Kitty's done a remarkably good job in keeping the doors open
with the adversity of New York expenses and the unfair competition
from bootleg (sales/use tax evaded) mail order. I salute her efforts.

I have built TenTec's Six Meter and now the 220 Mhz radio. The 220 Mhz radio has a scan feature that is very nice. I enjoyed building both radios, and would hightly recomend them.

The manuals are well done, Although I did find some errors in the 220 Kit's manual (E-mail me if you would like a list) and the units work very well. It is a great way to get onto 6 Meters and 220 Mhz. The big plus to me is that if for some reason you have a problem with the radio down the line you know that it is servicable.

Heh heh heh, make sure you stand within spitting distance of the repeater. It
does not perform anywhere near as good as the factory antenna....on 2 or 440.
Just on man's opinion.

Mike, a full wave is the "official" length, but just the usual rule of "as
much wire as you have room for" is my principle. I have 350 feet in a
pretty irregular, roughly triangular shape, ranging from 30-45 feet high
depending on the trees, and fed with open wire. Open wire and a balanced
tuner is the best bet for multiband use. This beats a G5RV or similar
"dipole" for general use, for sure. Solid 80 meter QSO's with 5 watts;
good QRP ragchew signals on 40 and 20. On 160, I can't really match it
with my tuner (shorter than full wave) unless I tie both feeders together
andfeed it as a random wire -- then I get excellent close-in results with
150 watts, and have had a few QRP QSOs also.

[snip]
> 73's from Kuopio,Finland
> Hannu, OH7WD

RG58 is pretty lossy to use for a multiband tuned setup where a 50-ohm
match is highly unlikely. No wonder he's getting only OK performance.

Mind you, this will not be a well-focussed DX antenna, but for general
operating it will be quite stunning.

2945. Heathkit SB-104: Power problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-19 00:00:00 UTC
From: Lennart Nilsson <ln@hagagymnasiet.norrkoping.se>
Message-ID: <3292ADFF.2FCA@hagagymnasiet.norrkoping.se>
Source record: 190364

I've inherited a SB-104 whose output is 100 W on 80-40-20 m, decreases to 75 W on 15 m and 40 W on 10 m. The ferrit transformers get hot on 10 m and the 2 W-resistor across the hybrid coupler tends to disappear into smoke. RF drive is unequal on the bases of one transistor pair. Does anybody know if this is a common problem with this rig and if it can be cured by just replacing one of the PA-transistors? Please mail to me.

Many years after I first raised wire antennas over my parents' house,
heavy objects occassionally fall to the ground in the backyard. I
used to improvise with small diameter rope and suitably sized rocks.

> mod.

I have the original mod's conserning the TH-79 from Kenwood here.
There is no info about wideband here.

Could you please give me any information how to set the TH-79(E) to wide
ban receive.

I have the new version of the TH-79, there is a old version (the old
version do not have the lock-out function and when listening to AM lower
than 136.000 Mhz the squelch stays open)

Maybe you have different versions here of the TH-79 and thats why the
act different.

Would you send me the mod's for wide band please ?

Do you know that it's possible to modificate your TH-79 for transponding
?
Receive on one freq. and direct sending to the other band (only possible
for 2m - 70cm or 70cm - 2m and not on the same band sending and
receiving.)

William

2957. Re: Kenwood TS 870 Tuning Glitches

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-19 00:00:00 UTC
From: Len Umina <umina@ultranet.com>
Message-ID: <01bbd5d2$679224e0$0f657392@kirk.ultranet.com>
Source record: 190416

Here's some additional info on the problem.

First, the good news, tuning with the mike buttons works fine.

The problems is definitely related to the rate of pulses generated by the main dial. There is a "resonant rate" for the dial and with practice you can find it. When you get it moving at the right speed the numbers on the dial will cease to increment (or decrement) until you move from the resonant speed. The 10 Hz digit will be rolling but 100Hz and up will not change when this rate is being input to the processor.

The problem of tuning non-linearity and digital backlash (that's all I can think of to call it) is most serious in the 10 Khz menu position and in the CW mode. It appears as though the processor cannot keep up with the dial, and the software starts to jump or locks, depending upon the actual pulse rate being generated.

One test I've made and repeated several times was to start on a certain frequency, say 7.010 and rotate the dial at various speeds CW or CCW and then rotate it back until the digital dial reads 7.010. Sometimes it will take 1.5 turns to get you back to where you were when you started turning. Thus the non-linearity description of this problem.

You can operate this rig for quite a while before you notice the problem. If you are moving the dial CCW or CW and tune onto a signal without reversing direction you will probably never see it. Of course if you overshoot and try to come back you can get there, but if the band is very crowded the non-linearity will fool you (which is how I discovered the problem during a contest).

Looking at the schematic, I notice a 27C512 (good sign) so perhaps there is a firmware update. Tomorrow I'll call Kenwood and see what I can come up with. I'll post news of the conversation here.

Well I saw someone else post a question about the tri-band mobile,
from Standard Co...

Has anyone tried one??? Are there any good mods for it???
Can it be made to Tx on 220Mhz???
Don't care abt celluar, just the legally licensed freqs....?

Any problems, bugs, patches required???

Well guys, a lot of questions - any answers????

De Tom

BTW> Does it have a port for digital work, or will it work 9.6k????

The questions continue....

Does anyone know anything about how t
enable the tone burst for european repeaters on he ft-530.

I know there is a mod, but I don't know if you loose any capability when
you do the mod.

If you can tell me anything about the mod please do.

Please note that I am not interested in the expanded tx/rx mods, just the
tone burst mod and anything else out there..

Thanks!

From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <56rb3r$l9h@coranto.ucs.mun.ca>
Source record: 190421

I have a few questions all related to the ICOM R-7000 Receiver.

Can someone tell me how to make the Squelch detection cable
that some software uses for the ICOM R7000 receiver?

I Believe it uses the parallel printer port on the computer and the
remote connector on the radio. Should be simple to make.

Does the same cable work with all software needing a squelch
detection cable that uses the CI-V interface? I see most software
ads usually say the R7000 needs the squelch cable for full support.

Can anyone recommend any software for the R7000? Would like
comments on R7000 software packages including shareware.

A few software packages had their own special interface like
the DELTACOMM by Delta Research and 801SCAN. Does anyone have
any software/cable packages like this forsale?

Don'tcha just love it when New Yorkers get going! I remember Barry
Electronics back when Barry owned it. He was a pretty decent guy when I
made periodic visits from Montreal to drool and dream over the neat stuff.
Bought a KWM-1 from them - very reasonable. Then Barry was killed in a
car accident and it was not the same anymore. I guess 30 years later its
really gone downhill. Haven't been there in years!

>while at the same time voiding the warranty of the radio.
>
>Get a life people!
>
>Joe

What, in your definition, is a "life"? The way I see it, if this person wants to buy a radio and remove resistors from it, that's his choice. In what way does this not constitute "living"? And he is, in the very least, entitled to post his findings to the rest of us. It is our choice to read it...don't you have anything better to do?

Is this the view you take towards anyone how does anything beyond activities associated with basic survival? Do you spend any time in your important "life" doing anything enjoyable, relaxing, fun, or just for the heck of it?

Then we start throwing around the warranty thing. Maybe, just, maybe, he doesn't care if he voids the warranty!!! SO WHAT? Have you ever pissed away $300 just for fun? Try it!

Oh, and let's not leave out the part where we all put on our FCC hats and talk very seriously about transmitting out of band and type acceptance. It is truly remarkable to find the number lawyers reading this newsgroup! I suppose that if I were to report that my car, after installation of some new parts, were capable of going 120 MPH, that we would all have to be reminded that the speed limit is 65 and that I have modified the emission control equipment. Do you stop everyone on the road who has a car capable of speeding and tell them what the speed limit is? We have a society full of people with cars that can be used to break the law, and things seem to run pretty smoothly. But one person with a radio capable of transimitting outside the amateur radio bands can't be trusted...

I'd be VERY careful about using a Charger hooked to a battery WHILE using
a Rig. IF you're going to do it, switch it out of the circuit while in
use or disconnect it.

I have a friend, who smoked a rig TWICE using a charger set up as spoken
of above. THe spikes are what did it. They put out over 14.0 volts D.C.
and in some cases, exceed the operating voltage of the components.
Ask yourself if the repair cost is worth it before connecting. His cost
him about $400.00 total. He now switches it OUT of the circuit and has
had NO problems since.

My Opinion.....

2971. FS or TRADE 940s/at for ic-706

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-20 00:00:00 UTC
From: Rich Yost <ryost@mhv.net>
Message-ID: <3293C2BA.5477@mhv.net>
Source record: 190280

I have a KW-940s/at (sn 8 million +) that I would like to either sell
for 1300.00 or trade for a ic-706 with a tuner.

The 940 has the follwing :
CW filter
AM filter
IF-10b
Kenwood Hand Mike
Giel Tuning mod
Memory Bank option
Kenwood Service Manual

Everything works great. Also for sale or trade with the radio or after
the radio is gone is the:
Kenwood SM-220 Station Monitor with Pan adapter,
SP940 Matching Speaker,
IF-232C Interface,
SM-2000 SWR/Power Meter,
MC-60 Desk Mike,
Mosley CL-33 Tri_bander (on the ground. Could go sooner)

This all could go as a packge deal also. What I would like to do is
trade this setup for a mobile HF (IC-706,tuner,antenna,power supply)
setup. Due to my daily commute, I spend more time in the car than at
home on the air.
I'd sell the whole station for 1700.00, negiotable

Around the New York tri-state area preferred, due to I really wouldn't
want to have to ship this stuff around, although I think I still have
all the original boxes.

please reply to ryost@mhv.net.

thanks,
Rich N2LLW

>I am interested in learning more about the SGC antenna tuner
>and possibly in buying one. Can someone tell me more about it?
>Brian ke7gh@primenet.com (602)839-3484

I used an SGC-230 / IC-706 combination this summer while racing my sailboat "Magic Carpet" from San Francisco to Hawaii and liked the tuner a lot. The SGC was connected to a 23-foot whip mounted on the sailboat's transom; I worked mostly 40 and 20 meters although the darn thing would load up on 160 thru 10 quite nicely - radiated energy being another question entirely in some cases.

I did have an excellent ground, having seawater all around. The tuner worked pretty much as advertised in this application and I really appreciated its robust construction in the marine environment. SWR presented to the 706 was usually less than 2:1. I also liked the "intelligence" of the tuner -- no need to do anything for it but let it sniff the RF and decide for itself what to do; and once it had decided, it didn't change its mind very often -- which I counted as a Good Thing. When returning to a frequency previously used the tuner was very adept at reproducing its previous settings extremely quickly and seldom if ever re-tuned unless forced by me to do so.

I have tape recordings of my signals given to me by good friends here in Portland, OR who provided the other end of our contacts during the 12 days it took us to sail from SF to Kaneohe Bay. With this equipment combination we were able to run excellent phone patches on 20 meters, and often yakked away for a good long time with the 706 cranked back to around 5 watts input power. Certainly the combination was no substitute for a big Yagi up 80 feet or so but it did a great job in the circumstances.

Before leaving for Hawaii we opened the SGC-230 up to have a look. Inside you will find lots of relay-switched inductors - mostly or all toroids as I remember - and capacitors, and a little digital circuitry. No roller inductors or motor-tuned capacitors; it works by algorithmically determining the correct L/C combinations to use correctly match the load presented by the antenna at the frequency to be used so that the SWR presented to the transmitter is about 3:1 or less, if I remember correctly, and switching 'em in. In most cases it tunes up "cold" (never used the antenna/frequency combination previously) in a second or two. It is nicely built, with stainless-steel hardware and O-ring seals holding the two plastic clamshell case halves together and (I think) gold-plated circuit board traces.

The only changes I plan to make to my on-board radio system are to substitute an insulated backstay for the transom-mounted whip antenna and improve the grounding system - salt water is hard on copper foil. Certainly I will keep the SGC-230 aboard; all in all I thought it a much better choice than the

options Icom offered for the 706. I can provide more information if you wish.
Regards,

Mark
(Now K7MPH, N7NEE this past summer)

2979. Re: Icom IC-706 Evaluation

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-20 00:00:00 UTC
From: "William O. Reichert" <billnihh@apci.net>
Message-ID: <56tjci$fm3@queeg.apci.net>
Source record: 190367

I've had one since May, and used it almost exclusively mobile until recently. As a mobile rig, I like it, I really enjoyed getting back on six meters with it and it works for working my local buds on two meter fm with out having another box floating around in the car.

Lately I've used it on HF with a very poor antenna, a downspout and raingutter totaling about 50 feet, in fact, fed as a random wire with an ICOM AH-2 tuner. Even with this poor radiator, some of the shortcomings of the rig come into play. Selectivity is not great. I work almost all cw and even with the 250 hz filter, there are problems. Of course I was used to rigs with cascaded sharp filters, and a single filter at 9MHz isn't going to be as good as a good filter at a high if and a better one at a low if.

You can have only one extra filter in the radio at a time. So if you want sharper ssb selectivity and sharp cw selectivity too, it can't be done conveniently.

There is a lot of filter blowby, that is, a lot of high pitched squeals that get around the filtering. As the signals get stronger, this gets worse. An audio filter or DSP maybe would help with hearing the high tones, but the real problem is the signals being in the AGC loop, causing audio intermodulation.

The full break-in keying is b-a-a-a-a-d. To quote someone else from a posting, ICOM must have had to work really hard to make it this bad. Clips characters. Semi-break-in is not so bad, as only the first element of a character is clipped, as long as the VOX holds in. The radio has a "ratio" control for shaping cw elements, but it doesn't seem to make much difference on mine. I don't know if the ratio control is supposed to be a weight control, but if it is, it doesn't work.

Without modification, much of the extended receive capability is useless. There are various mods floating around and it can be improved, but it will never be 1} a FM BC receiver or 2} a replacement for a VHF scanner.

Noise blanker is not very good. It can be internally adjusted to provide a bit better blanking at the expense of poorer cross modulation performance, an area in which the 706 doesn't excel anyway.

There are all kinds of mods to expand and improve (?) reception and transmission all over the ranges the radio covers. I think

expanding transmit from the low end to 54 MHz is fairly simple, although I have not tried it. I have heard of capacitors failing in the output filtering when this is done, too. The documentation of some of these mods is spotty at best.

Bottom line: would I get rid of mine? NO NO NO. There is no other rig like it, and within its niche, nothing else can touch it. It is not a DXers or contesters rig though, except perhaps for very casual operation.

Hello John,I own a KW TS-50,and I am vy happy of this;days ago ,I was
talking with a guy that own both TS-50 and IC-706 and,when I asked him
wich one is better,he told me that both are good,but the IC-706 seems to
be much more subject to intermodulations (especially on 40) than KW
TS-50...
That's all...(but the TS-50 dosn't have keyer,50 and 144 MHz...)
Ciao,

That's about the only way to be sure. Get one, hook it up in your
station and see if it cancels the type of noise you have. If it does,
great. If not, send it back and JPS will refund your money.

The ANC-4 works very well, provided the following is true:

1. You're dealing with man-made (not atmospheric) noise.
2. You're dealing with one predominant noise source.
3. You can orient the included noise pickup antenna to properly
receive the noise that's bothering you.

For more info, have a look at the ANC-4 FAQ on the web page at
http://www.jps.com

Source record: 190374

Has anyone ever had the problem with their 530 of it going dead on a good battery pack (several) but work fine with the DC power plug???

I can have it in the car, turn it off, disconnect it, put fresh charged battery on and its dead. Put it back in the car on DC and it works fine.

Any thoughts or suggestions would be appreciated.

Input / Output Jacks:
Headphone (REC OUT)
AM Antenna Input
Size: 10 3/4" x 6 5/8" x 1 3/4"
Weight: 3lb. 4oz.
Original LIST PRICE: $659.95

I purchased this radio new in 1994. I bought it for myself for
Christmas mostly because I kept reading about in several advertisement
and it sounded like a lot of fun. Regretfully I was never able to
take advantage of this dream hobby. The radio is in excellent and new
condition with very little use. Basically I opened the box played
with the channels settings for about an hour then put it away in it's
original packaging. It has been in storage in my closet every since.
It's very tempting to take up the hobby again, but frankly, I still
don't have the time, plus I need the money to go toward an engagement
ring for my fiancï¿½ to-be.

This premium unit has more features, "bells and whistles", than I can
list. It even includes a world time scale", LCD contrast control, a
key protection mode, dial lock, etc. The list goes on and on. It

comes with accessories including: the 170 page manual, SONY 6V (AC-E604) AC Power Adapter, SONY (AN-71) Compact Antenna (attached hanger clip antenna reel-in carrying case), Stereo Earphones, and Carrying Strap. I will also include these un-used books:

World Radio TV Handbook, 1994 Edition, by WRTH.
600p Published Price $ 19.95.
1994 Passport to World Band Radio, 10th Anniversary Edition.
432p Published Price $ 17.95

$500.00 + SHIPPING .... FIRM ....

If you are interested, please contact me at banister@rio.com. If you would rather speak to me on the phone, I can arrange that after receiving your e-mail. If you are in the area of EUGENE, OREGON, feel free to ask to visit and see the unit.

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries with charger. It uses a
LCD 4 digit frequency counter, an analogue SWR / %reflected power
scales read direct. No radio Tansmitter needed. It sees exactly what
the radio sees.
Only R2200-00. Still under guarantee. Used only once.
Ideal for the antenna experimenter.

3001. Peter Dulac KC4WWU add this to the list of people not to trust

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-20 00:00:00 UTC
From: scederas@bellsouth.net
Message-ID: <3292bd58.4502757@news.rdu.bellsouth.net>
Source record: 190489

I purtchased a IC-3230H from him via Fed Express. The radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

BTW I have since found out some interesting things about Peter
Dulac from previous friends of his. If there was ever any doubt about
him before ... I now have no doubt that he is not to be trusted!!!

DO NOT BUY ANTHING FROM HIM UNLESS YOU WANT TO SPEND MONEY TO
FIX IT.

Howdy KB2TIU --

Contact PAR Electronics in Fla. and they will make you a notch filter
that will take out only the offending frequency. They advertise in
the back of QST mag. Their filters are reasonably priced, small
enough to leave in line all the time even on an HT and VERY effective.

>No, I do not speak for my company, I speak for myself.

I think it will be quite sucessful. There are many times hunters, hikers,
hangglider flyers and others need limited radio comminications. Now it seems
most just use Amateur VHF transceivers although the users are not licensed.
There are alos some who use the marine VHF frequencies, but the Amateur gear is
cheaper and has many more frequencies to use. Business radio was a poor choice
due to the expense of equipment, If marketed right it should be a big boon to
communications. Selling cheap radios though will keep many manufacturers out
of the business.

KAWIN NEWS - Announcing KaWin 6.45

KaWin Home Page: http://www.mutadv.com/kawin/

KaWin 6.45 is ready for download! Corresponding changes to
the help file too. KaWin 6.45's enhancements were suggested
by KaWin users YO3JF and KD1NE. Thanks Ion and Ron!

In-line, keyboard macros - all of the macros supported for
Quick Keys and files are now available as you type.

The HF Mode Switch menu now pops-up for quick mode switching
when you click on the HF on-the-air box in the KaWin Status
Bar.

Users of non-English Windows versions will appreciate the
ability to turn off "slashed zeros".

The CQ Robot now permits calling intervals from one second
to two hours.

Problems copying and saving selected text are fixed.

The KaWin help file has been updated to reflect these
enhancements, but does not yet include the FAQ, "Tips" or
the suggested expansions.

I'm continuing to assemble notes for the addendum to the
KaWin Help file. This will add "Frequently Asked Questions"
(FAQ), and "Tips" topics to the Help file, and your
contributions are needed. Input is solicited from tire-
kickers as well as new and old registered users.

Please send all contributions to: stan@mutadv.com

73, Igottago... Stan ..

I am getting ready to sell my Henry 3K amplifier. This is a specially built commercial/industrial model that has ALL the features offered in the various 3K models.

This amplifier has the heavy duty power supply that runs 4200 volts. It is in a floor console with the RF deck mounted on the top of the console. RF deck has the 3CX1200D7-----NOTE D7 tube-- and operates on all bands 160-10 meters. Henry offers the amplifier in versions with smaller power supply, with the A7 tube that has lower grid dissapation,and without 160 meters. This amp has ALL the good stuff, big power supply, big tube, and 160 meters. New price for this amp is almost $4000, I will sell for $2995. It is in excellent condition and is complete with manual.

Have picked up a Collins S-Line package 75/32S-1 and all works well.
I am looking for a source of crystals that I can add 17 meters to it.
The Collins manuals point out the frequency required of the internal
crystals and I am looking for a source or a company that is still in
business that can make them. Anybody have any idea's?

Replace ALL the caps in the 20v supply circuit especially the .47uf
electrolytics. Make sure you use the correct transistors, not ecg's.
Should run fine. Also check the zener in the -6 supply.

Rik,

Work on improving your antenna instead of increasing the power output. A 3db (double, 200 watts)increase in power is just noticeable at the recieving end. I chuckle when I hear of people turning up these rigs to 135 or 150 watts. The improvement is all in their heads. Try this next couple of qso's, reduce the power from 100 to 50 watts and see how nobody can tell the difference. Plus cranking up the power on these solid state rigs will not only shorten the life of the finals but likely greatly increase IMD that will make problems on the band for everyone.

I doubt that keeping the tuner in line would do much for receive unless you have a very strong broadcaster near by. The improvements in both reception and transmiting by improving feedline, connectors, and antenna are the way to go.

My opinion,

73's Bob

Hi Kory, I have the 706 and it's a power hog. I use 2 deep-discharge
marine batteries (one can charge while the other is in use). The
SGC-230 soaks up about an amp. A manual tuner would conserve power.

>All suggestions appreciated. 73, Marty
I built one for my old 747GXII, and wrote the qbasic to run it. I'll
make a note to send you an e-mail with code attached. The code is not
complete, but all of the basics are there, including a scan routine.
The circuit is fairly easy. I used a Maxim dual tx/rx chip because I
found a sample (read free!). I did add some LEDs to give visual when
data flowing and a few signal amps to insure 0-5v swings for data. I'm
not sure about the 757, but my 747 would not respond to anything less
than 4.5v or .5v as 1's and 0's respectively.

3036. ! Product reviews available?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-20 00:00:00 UTC
From: Jon Endres <jonnycat@sover.net>
Message-ID: <329385EE.FC0@sover.net>
Source record: 190524

Hi all,

Where can I find reviews of HF transceivers from the past five to ten years? Is there an index available somewhere or a Web page with links? Anything in print or on the web will do.

Also, would like opinions from anyone on a new or used HF transceiver to purchase. Need 2m and 6m modules, 10-80m at a minimum built-in, general coverage receive, digital display, something very basic, fairly new, and cheap; it'll be my first HF rig and I'm not much of a techie for boat anchors. Mobile use not necessary.

Please e-mail with any response to this message. Thanx.

FS: Icom 751A & AT100

Icom 751A, 100 watt transceiver, 10 through 160 meters, General Coverage Receiver with CW filter installed, desk mike and DC power cord. The radio has never been mobile. The optional internal power supply is not installed $650.00.

Icom AT100 matching external automatic antenna tuner with control cable to connect to a Icom Radio $225.00.

The units are in very good condition, I guess they could be classified as near mint, with manuals, however I don't have the original boxes.

Sell both for $850.00

Prices include shipping.

Dave,
I bought a "helmet" ear piece with clip on mic. I use it while riding my quad. I have only seen this item at HRO in Burbank, CA. It is avail in two different config's, ICOM or Kenwood compatible end plugs. I ended up modifing mine for use with my mobil I mounted on the quad, but comes with either end plugs for the HT. It also comes with a remote PTT switch.
Good Luck, Mike K6YPB

3044. FT-50R external DC socket cover.

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: CSupak <csupak@ucla.edu>
Message-ID: <32953625.1934@ucla.edu>
Source record: 190232

Hi all.

Drove in the rain down to Yaesu to ask a question, and buy a CLP-10
clip for my FT-50 today. The question was will the VX-10's external DC
socket cover fit on the '50.
The clip went for $7.00. Fit exactly as the stock smaller clip.

As I looked at the radios I was sure that they would. But.. the counter
guy said no without even going in the back room. The back room where the
radios are kept. Alas.

The VX cover fits flush and is made of the same ABS plastic as the case.
I never use the DC port so why have that lame rubber flap that keeps
coming open? Anyone with a busted VX want to give it a try?

Also I looked at the VX-10 flyer. The display's not like the 50's at
all. Give up the expanded display idea all together. Not a chance.

Matt

--
First they came for the hackers. But I never did anything
illegal with my computer, so I didn't speak up.
Then they came for the pornographers. But I thought there was
too much smut on the Internet anyway, so I didn't speak up.
Then they came for the anonymous remailers. But a lot of nasty
stuff gets sent from anon.penet.fi, so I didn't speak up.
Then they came for the encryption users. But I could never
figure out how to work PGP anyway, so I didn't speak up.
Then they came for me. And by that time there was no one left
to speak up.

I have seen Ski Patrol personnel use a nylon harness rig that holds
their radios up on their chest, just below the chin. The radio is
held in place by velcro strips. The harness of course goes over the
sholders and crosses in the back so everything is secure. When they
want to talk they lower their mouth down and speak. The radio is
close enough so they can hear. Of course they have to use their hand
to press the PTT button. I would try to keep the radio somewhere on
you because of the vibration and jolting the radio would receive from
the frame of the bike. YOu are a better vibration dampener that the
bike.

I do not like the little bug speaker/mic that fits into your ear. I
have use some and it always seems it falls out or the wire going up to
it gets caught in clothing and is pulled out, or you move your head
and once again it is dislodged. If there is a headset/boom mic
arrangement, I think it would be better.

I am lead to believe that you need an external antenna on your bike
and the rubber duck would not reach out the way you wanted. I have

mounted a 1/4 mag mount on the bike rack that fits over the rear wheel. Coil up the excess coaxial cable and route the rest to the radio. Bad feature about this is, if you have the HT on you, then you are attached to the bike via the coaxial cable, and you must connect-disconnect the cable everytime you get on or off. The good feature is that your radio is not taking a beating from the vibrations of the bike. I know a 1/4 does not work on both freq. but it doesn't need a ground plane either. I have just operated on 2Meters only when I was doing it so I haven't explored dual band antennas that do not need ground planes.

Hope this gives you food for thought.

3054. TS-440 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: w9sz@prairienet.org
Message-ID: <570n69$9jn@vixen.cso.uiuc.edu>
Source record: 190292

My TS-440S seems to have recently developed a little bit of a chirp on CW. It seems to be worse when the SWR is a bit high (1.7:1) but is still noticeable when I use the antenna tuner or tune into a 50-ohm dummy load.

The problem seems to have just started sometime last week..

Has anyone experienced this problem before? Maybe a capacitor going bad somewhere? Is there an easy fix for this?

Zack W9SZ

3055. Rotator Controlers / Sat Trackers

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: Chris Lewicki <chrisl@seds.org>
Message-ID: <570phd$ht4@news.ccit.arizona.edu>
Source record: 190293

Hi Folks,
I posted a note a few days back, but I never saw it show up
here, so I'll post again.
We're setting up a satellite ground station for our University
Ham Club, and I'm in the process of selecting a "rotator controller"
to drive our AZ/EL rotator.

Here's the equipment we'll be working with:

Yaesu 736R (Will I want to get the serial add-on?)
Yaesu G5400B rotator
Sat Track V3.1 running on Linux
"Some satellite controller"

Basically, I need something that I can command myself, via a program I
can write to talk to the serial port. Would it be better to have the
computer control the radio, or the tracker? I'd prefer to just deal
with one serial port, however. Sat Track is pretty easy to modify as far as
commanding, and it allows for talking to the rotator controller and radio
on separate ports.

Anyway, I'm looking at the following:

AEA ST-1 Sat Tracker
SASI Sat Tracker/Tuner
Sat Track IV (This seems to be the best so far)
Kansas City Tracker

I'd like to hear what experiences people have had using any of these units.

3058. Bicycle mobile?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: kharker@cs.utexas.edu
Message-ID: <kharker-2111960108370001@slip-56-6.ots.utexas.edu>
Source record: 190296
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.antenna

I commute to work/school every day on my bicycle and I've recently decided that I'd like to operate bicycle mobile. I already have a dual-band FM HT, but I'm interested in hearing from others about the best way to accomplish the rest of the setup.

* Naturally, I'd like to be able to operate with both hands on the handlebars at the same time. This means VOX. I know that one of the accessories designed to work with my rig (an Alinco DJ-580T) is a headset with VOX. There is also an earbud-mic accessory from Alinco that I think might work with my rig (and is $20 cheaper.) Assuming that I can choose from either one, which is preferable? What are people's opinions of the earbud-mic arrangement?

* What is the best way to secure my HT to the bicycle? Ideally, it should be easy to attach the radio to the bike and easy to remove it. Or is it easier to somehow attach it to myself or my backpack?

* I think a simple dual-band mobile-style antenna would probably be the best way to get out. My bicycle is a mountain-bike style and I can easily get a
rack to fit over my rear wheel. Is there a mobile antenna mount that would easily and securely attach itself to such a rack? Can anyone recommend a particular antenna/mount combination?

Anything else I should keep in mind?

Hi,

would you recommend your Voice Memory Keyer box?

Please let me know:

- Product, Manufactor, Distributor, average Price
- Functions, Storage, Connections, Power Supply, any Extras, etc.
- Your experience with the box
- Any further recommendation

If there is any general interest, I'll summarize it and post it here.

Many thanks in advance.

Hi group.
I have a Compaq Contura laptop 486 sx 25 4 mb ram 200 mb harddrive with a fairly new battery, case, mouse power supply, has mono screen built in modem in great shape, looking to trade for
1. Cash
2. FT50R 5w preferred any options a bonus
3. HT1000 UHF or VHF
4. Vertex 99 channel mobile radio, also either UHF or VHF
5. ?????IDEAS??????
Looking to get around 700 for the computer, would also much prefer to do a face to face deal if it involves a trade, I can deliver from Portland, ME to Providence, RI thought this weekend I will be in Unity, ME....if interested email Scannaman@AOL

You said you were open to opinions on this.

Try this--

Put your charger/battery with a load similar to what your rig draws when recieving, take a look at the output on your O-scope. Then place a larger load similar to the draw of you rig in transmit(car headlight?) Then take another look at it. Compare the same to a good power supply(I mean good like Astron).
You could also build a filter.
If you plan to use the rig with the power out and the charging system hooked up, you'll probably need to hook in some heavy diodes between the charger and the battery.
Also possible is a relay to drop the charger out of the circuit when the AC power goes out.
Also check the voltage with the rig off and the charger and batt hooked up for a while. It doesn't take too long to boil the acid out of the battery.
A better choice for batteries would be a deep cycle marine battery.

A better suggestion is to build your own real power supply--a great Ham project. I'm almost positive that the ARRL handbood has plans. You can find parts at most any hamfest. Make sure you build a crowbar circuit to protect your radio if the supply goes wacko! You can even add in your battery for backup power.

If all else fails, pull out the old wallet. You could easily spend more on your batt/charger setup than buying a new PS.

No opinion, never used one. When I used to do that, I used a
speaker-mic.
But I was much younger and dumber then ;)

>
> * What is the best way to secure my HT to the bicycle? Ideally, it
> should be easy to attach the radio to the bike and easy to remove it. Or
> is it easier to somehow attach it to myself or my backpack?

Advantage to wearing it: lower shock. Disadvantage: you are attached
to the antenna on bike. I prefer to put the radio in a front pack and
secure it with judicious use of bungie cords. I used to use an old
IC-2AT when I did this, however. Your radio may have more densely
packed
controls on it.

A front pack with a good bungie cord suspension isn't quite as shock
proof as you are, but it ain't bad either.

Another advantage to the front pack: you can add a bigger battery
there and run higher power --even a power amp if you're really crazy.

>
> * I think a simple dual-band mobile-style antenna would probably be
> the best way to get out. My bicycle is a mountain-bike style and I can
> easily get a
> rack to fit over my rear wheel.

Good arrangement. I used something very similar and it worked.

> Is there a mobile antenna mount that
> would easily and securely attach itself to such a rack? Can anyone
> recommend a particular antenna/mount combination?

I suggest securing the antenna to the side of the rack mount strut which
goes down to the rear wheel. You'll want to make sure your rack is

good and sturdy, of course. You might get a better installation if you secure a piece of steel along the side with screws and a clamp or two. Then you can drill the steel and use a marine antenna mount.

>
> Anything else I should keep in mind?

Yeah, make sure you can still mount the bike. With an antenna mounted as I have suggested, you won't be able to comfortably swing your leg over the back to mount your back. One way to get around this problem, if you use the marine antenna mount, is to swivel the antenna down before mounting the bike. You can then swivel the antenna up after you mount the bike (a bit of string or fishing line attached to the antenna might help here).

Another issue: Your bike is not a good groundplane. You should try to get an antenna which doesn't need much of a groundplane -- i.e. not a 1/4 wave or 5/8 wave. Get something like a half wave vertical. Also make sure the thing is relatively flexible (to smash in to branches and the like)

While a 1/4 wave requires a groundplane, a dipole doesn't, if you mount
on the side of a rack, you can make a dipole about as easy as a
vertical, there will be some detuning from the bike, but HT's are
fairly forgiving of SWR since they are designed for ducks.

3071. Re: RCI-2900/SuperStar 360FM Freq warble fix.

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: David Spillett <ka2ctn@ix.netcom.com>
Message-ID: <01bbd7d2$a1daddc0$696dd9ce@david-spillett>
Source record: 190309

The RCI2900 models manufactured after 12/31/1991 have a protection circuit in the processor to force this "frequency warble" problem when operated in the 26 to 28 mhz range. Once operated in that frequency range, the processor software instruction set is permanently modified and soon the radio will be totally useless. Each time you operate in that frequency range, the modification of the processor instruction set becomes more and more distorted. There is only one known modification to correct it. You can receive special instructions from the www.fcc.gov web site. Go to the home page and do a search for your desired frequency range or send an email message to them requesting the instructions for operating in the range you wish. Their reaction time is quite fast.

Good luck!

3077. Replacing panel lights in ICOM 229h?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: Paul.Ferguson@pobox.com
Message-ID: <3294b60b.28168292@news.mindspring.com>
Source record: 190315

I need to replace the panel lights in my IC-229H.

I ordered the bulbs
from ICOM and now have them. I took the covers off the unit and it
appears the front panel cover needs to be removed. I pulled the knobs
off and now it seems that I must take the nut off the frequency
contol and the mike connector.

I think I need a special tool to remove the nut from the mike
connector because the nut is recessed into the hole and there are some
indentations in the round nut. Does anyone know where to get this
tools? I could use some nails and pliers, but this is likely to slip
and scratch up the faceplate.

Hi, Netters:

I recentely bought a multimedia PC and I am curious about
the floowing question.

usually shortwave broadcasting are very noisy, especially
listening to far or weak station. Are there any hardware or software
that take the output from shortwave radio (through audio output) and
perform "noise filtering" and "signal enhancing" process on PC and
send to PC's speaker? in that way, the audio quality can be improved without improving
antena system. Any pointer is appreciated.

From: clint.bradford@atdbbs.com
Message-ID: <9611211320514587@atdbbs.com>
Source record: 190319

>> Searching for info on how to interface Icom 735 with computer...

I have finally got the remote control working on the IC735. The
interface is home-made and uses just 2 transistors, 1 diode, 5 resistors,
DB25 and a DB15(to get 5v from games port). The software is a major re-hash
of VK7TM's FT757 effort in ARA. All functions are driven from the XT
keyboard and the software allows scanning of a LARGE number of frequencies
on the same or on different bands.

The trials and tribulations of all this effort were NOT assisted in any
way by the manufacturer's local office in Melbourne. A call for
information was not very successful. (try it and see!)

If you are contemplating the idea of turning your IC735 into a multi-
channel HF scanner, I may be contacted @ VK3YZW BBS..

The software is suitable for use with XT/AT Clone...

Available control functions:
Send a new frequency to the radio from the keyboard.
Send a new Mode to the radio.
Select VFO A or VFO B.
Select a different memory channel
Enable the selected memory channel
Write current Freq/Mode to selected memory channel.
Write current Freq/Mode to last used VFO.
Read/Edit/Use a frequency file from Disk.
SCAN frequencies in a frequency file.

The frequency files contain frequency/mode/description of station all of
which is displayed on the screen when the file is active.

Mike,

They STILL do that? I complained to Yaesu about that problem on my FT-727R (handheld dual bander, not, as people think, a really cheap 757 or 747). Hit the VOX or power button on top and -poof- someone gets a chrome button in the eye. I hate to say it, but I finally broke down and hit the Crazy-Glue.

FS: Icom 751A & AT100

Icom 751A, 100 watt transceiver, 10 through 160 meters, General Coverage Receiver with CW filter installed, desk mike and DC power cord. The radio has never been mobile. The optional internal power supply is not installed $650.00.

Icom AT100 matching external automatic antenna tuner with control cable to connect to a Icom Radio $225.00.

The units are in very good condition, I guess they could be classified as near mint, with manuals, however I don't have the original boxes.

Sell both for $850.00

Prices include shipping.

>details.
>Anyone out there seen these radios?

The AP50 is a truly neat radio. It does not know from intermod and/or adjacent channel. It has great TX/RX audio. It has only one REALLY STUPID design feature. It's CTCSS feature is programmable only for the entire radio (e.g. one tone for all memories/vfo's) and it has only 2 operational modes, off or encode/decode. Now while I happen to think that all repeaters should encode as wells as decode PL (and all that I build do), the fact is that
most do not. If you can live with that limitation, it is a wonderful radio. Supposedly, the CP50
version fixes this problem, but I have not seen one of those yet.

3086. Re: has anyone heard about the new fcc band for families?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-21 00:00:00 UTC
From: schlemba@ix.netcom.com
Message-ID: <572q25$6bq@sjx-ixn4.ix.netcom.com>
Source record: 190324

The new band is the FRS or Family Radio Service band which lies on the GMRS interstitial frequencies between 462.55 and 462.75 and the repeater inputs 5 MHz higher. 14 channels in all but the new RS radio FRS-105 uses only the top 7 (467 MHz) interstitals. IMHO, a real pain for GMRS users.

Surplus Equipment List
KLON

It was time to clean out the storage closet. I'd hate to just throw this stuff away. If you think you can do something with it, and can come get it, its yours for the asking. (Except for the Otari's, I need to recover a few $$'s on those.) KLON is located in Long Beach, CA on the campus of Cal State University, Long Beach. First come first served. Please don't ask me to ship anything. I don't have the time to deal with that right now. You can however, contact me via e-mail at rthompson@klon.org. Thanks!

Otari Reel to Reel Recorders, MX5050, broadcast standard, 1/4" tape, 1/2 track stereo.
One machine, unknown condition, the other noisy capstan motor. You can most likely combine the two machines into one good working machine.
$50 for both o/bo.

Yamaha Natural Sound FM Stereo Tuner CT7000, appears to be vintage late 70's or early 80's consumer receiver. Problem with audio output. Unit has an IF output feature. $0

Old Blue Chip IBM clone w/harddrive a 286? $0

Obsolete National Public Radio control panels. Possibly good for scavenging parts. $0

>--
> Chris M. Bridges
> N4FAN

The GMRS users were afraid of several things when this service was being considered; interference with repeaters, loss of interstitials to "Channel 19" style garbage, and illegal high power users. The FCC bowed to pressure from Tandy but did restrict several things to help alleviate these concerns. Power is limited to 1/2 watt, antennas cannot be removed (making linears very hard to integrate), emission bw is limited to about 2.5 kHz. As a GMRS user, I like the interstitial channels as much as the assigned primary channels. These channels guarantee interoperability between two different GMRS licensees as they may only operate on one or two primary channels (of 8). I would like to believe Tandy is using only the top (467 MHz) interstitials, which are NOT part of GMRS, to reduce interference to existing GMRS users. Hope these units don't trigger the repeaters though.

Two more issues; FRS can use CTCSS (as can GMRS) and FRS can be used by businesses (GMRS cannot any longer). Would hate to live near a Wal-Mart sized store using cheap FRS handhleds for all of its associates! Good bye interstitials...

>http://www.texas.com/acc

Seems pretty much like a scam to me. $5 "photo processing fee" per entry. I have a better deal...don't waste your time getting your pet to pose, waste film or throw money away....just throw money away. I'll give you nothing for only $4.99!

:-)

Source record: 190148

I am looking to buy a hand held unit VHF/UHF for use backcountry skiing,
hiking and mountain biking.
I have looked at CB and decided that the range is just not good enough.
I intend to do course and get my license.
So what units should I be looking at? How much should I expect to pay?
Is there a good source for reliable second hand equipment?
Is this sporting use hard on the equipment?
Can someone help a newby?

Build, ha! Many of us "appliance operators" are either too busy to build
or don't know one end of a soldering iron from the other.

Besides, OEM equipment always looks so much nicer.

Radio Randy.

>covers Ham, aviation and marine bands. Is this possible?

Not likely...avaiation uses AM (amplitude modulation), which is fairly non-standard among transcievers. It is possible to purchase a radio with an AM decoder, but this means receive only.

It's certainly possible to find an HT that covers the rest of the VHF range you describe, FM (frequency modulation). The Icom IC-H16 is an oldie but a goodie, and most of the land mobile portables and mobiles (Motorola, Bendix, Kenwood, etc) can be programmed (legally) for anything in the band that you're licensed on (144-174 is typical).

Does anyone know of a headset available that can be used inside a helmet? I use my radio when flying a hang glider and need one that has a small speaker that can be placed inside the padding by the ear and has a small mic that can be placed inside the padding in the face protector. Also need a finger PTT. Must be compatible with Yaesu FT11r.

Thanks in advance....

I replaced the lights in my 229H.

You do need to take the rings off... I used a needle-nosed plyers, with
a 3" nose on it. Put the ends into the holes, turn the ring sideways.

From: Peter Shintani <shintani@tv.sony.co.jp>
Message-ID: <573a1l$gcp@oskgw.osk.sony.co.jp>
Source record: 190246

Hi:
I am not satisfied with the stop band rejection of the optional
FL-223 (1.8 kHz SSB filter 9.0115MHz) in my IC-706.
I was wondering if anyone knew of a 3rd party source
for real crystal 9.0115 MHz SSB filters.
I belive that the in/output impedance is about 2k

Incidentally, the ICOM
9 MHz filters are monolithic ceramic and most likely
made by Murata. Probably very cost effective, but
believe that " real" crystal filter would offer
much better stop band rejection.

After turkey day, I'll have a chance to list various vintage my father had acquired over the years. He's a silent key now. Mostly post WW2 to the 60's vintage. Some HP, Eico, General Radio, and similar. Mostly vacuum tube technology. TV test gear, signal generators, VTVMs, and similar.

Stuff I'd like to see find good homes, better that than trashing it. Location: Bergen County NJ, NYC surburbia. I don't think shipping would make economic sense, so local pick up would be needed. Email me for more info after thanksgiving.

3138. IC-R8500 (cell phones)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-22 00:00:00 UTC
From: emarch@ais.net
Message-ID: <574nig$k90@news2.ais.net>
Source record: 190260

I noticed the IC-R8500 gen. coverage recvr blocks cell phones
yet the HT's seem to cover this area... Seems like a rip. when
$2000 wont do it but the $350 HT will ! Is this a new law ?
Can the R8500 be modified ?

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4
months.
think about it. You see those 'Make.Money.Fast' posts more and more.
That's ... because it WORKS ! So I thought, all those new users might
make it work. And I decided to try it out, a few months ago. Besides,
whats $5.00, I spend more than that in the morning on my way to work
on coffee and cigs for the day. So I sent in my money and posted.
Everyone was calling it a scam, but there are SO many new users from
AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I
couldn't
believe it! Not just a little, I mean big bucks! At first only a few
hundred dollars, then a week later, a couple of thousand, then BOOM.
By
the end of the fourth week, I had recieved nearly $47,000.00. It came
from all over the world. And every bit of it perfectly legal and on
the
up and up. I've been able to pay off all my bills and still had enough
left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well.
Markus
Valppu says he made $57,883 in four weeks. Dave Manning claims he made
$53,664 in the same amount of time. Dan Shepstone says it was only
$17,000 for him. Do I know these folks? No, but when I read how they
say they did it, it made sense to me. Enough sense that I'm taking a
similar chance with $5 of my own bucks. Not a big chance, I admit--but
one with incredible potential, because $5 is all anyone ever invests
in
this system. Period. That's all Markus, Dave, or Dan invested, yet
their $5 netted them tens of thousands of dollars each, in a safe,
legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces
of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST."
(In
this way, you're not just sending a dollar to someone; you're paying
for
a legitimate service.) Fold a $1 bill, money order, or bank note inside

each paper, and mail them by standard U. S. Mail to the following five addresses:

1- Natalie Jansen
Lancveldlaan 18
5671 CN Nuenen
Holland

2- Chad Collier
2785 Cold Springs Rd. #49
Placerville, CA 95667

3- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

4- Jeremy Bero
2021 M SW
Miami, OK 74354

5- Jeffrey L. Shell
P.O. Box 1114
Johnson City, TN. 37605
STEP 2.

Now remove the top name from the list, and move the other names up.This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at least 19000 newsgroups at any given moment in time. Try posting to as many newsgroups as you can. Remember the more groups you post to, the more people will see your article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the Internet is new and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses. Yes, thats right,only 5. You make $5.00 in cash, not checks or money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1.00 with your name at #4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for
real, then don't do it. But please print this article and pass it
along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

IMHO: I dont know much about GMRS but seems to me its a prety good idea
to put a service in the 470 MHZ range if you must have one somewhere
because normally propagation is line of site also much more diffucult
to tweak,peak,amplify,use a power mic and so on. The origanal 11 meter

band was turned loose (around late 1950?) when UHF gear was expensive to buy or build. If they could have put CB service in UHF region then, You might not have the problem you have today on 11.

3144. Def: Ham Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-22 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9611221000004613@atdbbs.com>
Source record: 190266

>>How did the hobby Ham Radio get the term "Ham" Radio"?

Simple.

Before I got into the hobby, HAM stood for:

Have A lot of Money
-....-........-....

Now that I've been drawn into this marvelous hobby, it stands for:

Had A lot of Money
-...-........-....

<grin>

The truth is, we are not exactly sure of the origination of the term,
"ham." In texts that I edit, I prefer "Amateur Radio Operator."

- Clint Bradford

3145. FT-50R NAME/FREQ

Newsgroup: rec.radio.amateur.equipment

From: Melvin Seyle <wa3kzr@worldnet.att.net>
Message-ID: <32962F36.1238@worldnet.att.net>
Source record: 190267

At the top right of page 30 of the FT-50R manual it says, "You can assign a name of up to 4 characters to memories, and have it displayed with both name and frequency." Is this correct? I can get the FT-50R to display either the NAME or the frequency, but not both at the same time. The left side of the display shows the NAME or the frequency, and the right side shows "CH-n". I would like to be able to display both at the same time if this is possible. Any ideas?

Please reply via my email address: wa3kzr@worldnet.att.net

Thanks.

3156. DC Connector for Kenwood, Icom, Alinco, Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-23 00:00:00 UTC
From: n2cjj@ibm.net
Message-ID: <5775d5$a8i$1@news-s01.ny.us.ibm.net>
Source record: 190078

I have found a source for those DC power cord plugs. The ones I've got have male plastic with 6 metal female (barbed) inserts.

The plug fits most 12VDC HF radios:
Icom 720, 730, 735, 740, 745, 706..and alike, newer Yaesu and Alinco DX70.
Kenwood-TS120, 130, 140, 430, 440, 450, 850..
Kenwood-TS50, 60, 660, 670, 680, 690...and more.

Make your own power cord yourself, YOUR WAY!
Crimp or solder, short or long, heavy gauge wire, purple with pink polka-dots...

Each DC Plug comes complete with 6 crimp/solder inserts
for $4 each, or the deal 3 for $10.

All prices include postage in the US and Canada.

To order, kindly send a check in US funds to:

Robert Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car or at work and are stuck re-connecting and dragging the power cord all over....

It sure beats paying $30 for a spare from your dealer.

I use a hand mic. The radio is attached to the handlebars. See below.

> * What is the best way to secure my HT to the bicycle? Ideally, it
>should be easy to attach the radio to the bike and easy to remove it. Or
>is it easier to somehow attach it to myself or my backpack?

I took a mount for a handlebar-mounted light (Cateye is the brand of the light) and modified it to mount on the back of my ht. If you want details of this arrangment, email me.

> * I think a simple dual-band mobile-style antenna would probably be
>the best way to get out. My bicycle is a mountain-bike style and I can
>easily get a
>rack to fit over my rear wheel. Is there a mobile antenna mount that
>would easily and securely attach itself to such a rack? Can anyone
>recommend a particular antenna/mount combination?

I use the rubber duck. Distance isn't great but then again our club rptr is at 825 feet or so (http://www.intercom.net/user/jxs2151)

> Anything else I should keep in mind?
>

When mounting the radio to the handlebars I had to do some mods to the mounting arrangment to dampen vibration. I have a road bike so bumps are minimal. I am much more concerned for the radio when I mount it to my off-road bike and go off-road, particularly because the radio is right in front of my face and I can see it being bounced around. This will probably not increase the usable life of the radio :--)

Jeff

THE NEW KENWOOD TM-V7A MOBILE RADIO HAS A NEW RECIEVE FEATURE THAT IS GREAT!!!!!!!

THE VFO TUNER CAN BE SET FOR MAXIMUM SENSITIVITY FOR WEAK DX WORK OR FOR A LOCAL-VFO SET POINT THAT ELIMINATES ANY INTERMOD. WORKS GREAT AND BETTER THAN AN ATTENUATOR!!!!!

NOW CAN YAESU PUT THAT IN MY FT-50R?

I have for sale a small quantity of GE MVP mobile radios currently on 453 Mhz. They are the high power model, 21-35 watts. They are four channel capable and come with one set of elements. They have PL encode with a 192.8 versatone included. Tested good. No accesories. Great for conversion to a repeater.

I'm asking $99 each or 5 for $400. I'll pay the shipping UPS surface.

Email response or send a check to:

Matches the IC-735, but excellent on most ICOM HF rigs, with proper
cable

Absolutely showroom new, inside and out

150W maximum input...use _before_ an amp, if you run one

Auto-presets enable extremely fast tuning
Feeds up to three coax lines and/or random wire

Very small, lightweight and compact
Details in the latest HRO catalogue; sells new for $530.

Original documentation included

$325 money-order or certified check, plus shipping (Portland, OR)

>should be necessary.

No, there are not different sections for VHF-FM and HF-FM.
The radio uses IF modulation. Q40 is the 9.0115 MHz FM VCO.
It is used on all bands. There is only one deviation control,
R274, it is used on all bands. You may be confused by the fact
that there is another adjustment to the FM modulator, R260. This
adjusts the audio level going into IC24a, the FM modulation
limiter IC, and sets the modulation limiter threshold. It too
is active on all bands.

The setup procedure has you setup FM on 10m *only*. That's
because it's the same on all bands. You feed 300 mV of 1 kHz
audio into the microphone input and adjust R274 for +/- 4.8 kHz
deviation. Then you reduce the audio drive to 10 mV and set the
FM modulation limiter threshold adjustment, R260, so that you
have +/- 3.5 kHz deviation. That gives proper modulation limiter
action.

Use of the speech compressor in FM mode is not indicated
since the FM modulation limiter already serves that purpose.
All you'll do with the compressor on is force IC24a harder
into limiting and generate more distortion.

>
>I am open to other opinions on this.

This depends on the charger and what external spike protection you are using. Trickle chargers generally use one of two forms of current limiting. They either have an internal series capacitor to limit current, or they have a transformer which saturates at the desired current draw (this is more desirable). They generally have no output filtering.

Now neither current limiting method offers good spike protection. The series capacitor method acts as a differentiator and can actually make powerline spikes worse. Voltage can also soar to extremely high values (up to 1.41 times AC line value) if the battery connection becomes loose, avoid these units like the plague. You can identify them by the fact that they are small and very light.

The saturable transformer method doesn't make things worse, but unless the transformer is Faraday shielded (fat chance, these things are built cheap), it won't stop spikes either. But it is no worse than an ordinary 12 volt power supply since most of them (except the expensive lab grade units) don't use Faraday shielded transformers either.

The major difference between power supplies and battery chargers is in the output regulation and filtering. Battery chargers don't have any, power supplies do. The output filter capacitors act to smooth the voltage, and thus offer some spike protection. In a battery charger, the *battery* acts as the smoothing capacitor and voltage regulator. And it is a darn good one at low frequencies. It isn't so hot at the high frequency of a spike, however, but then

the big electrolytic capacitors in a power supply aren't so hot at high frequencies either.

So what to do? Simple, whether you use a power supply or a charger/battery, you need spike protection circuitry at the AC input and at the DC output. Any of the common MOV and inductor power line suppressors will help (some are better than others, but price isn't always a reliable guide). Plug that into the AC outlet, and plug your power supply or charger into the surge suppressor.

On the output side, add 0.1 uF and 0.001 uF capacitors in parallel across the DC output lines. A MOV can be added here too if you're paranoid. This is your final line of defense against spikes, and it also keeps RF from getting back into the supply. This usually doesn't matter with a charger/battery setup, but RF getting back into a regulated power supply can make it lose regulation and spike your rig *hard*. (That's killed a *lot* of radios.)

Note, if you intend to use a regulated power supply to charge a battery as a backup in case AC fails, be sure to add a diode between the power supply and battery so that battery current can't flow back through the power supply regulator when the power is off. Otherwise the power supply can become a *discharger* for your battery, and there's a very good chance the regulator will be ruined as well due to reverse currents (that'll wipe out the regulator in a Radio Shack 12 volt supply virtually every time since there's no reverse protection for the regulator, some other makes of supplies have internal protection, some don't). A battery charger won't have this problem because its rectifier diodes serve this purpose (there's no regulator).

Note too that most nominal 12 volt radios actually expect between 13.8 and 14.5 volts input. That's what's available in a car with the motor running. Some of them can get very squirrelly when the voltage falls below 12 volts, so you probably won't get anything like the rated amp-hour life out of your backup battery when the power fails (the rated amp-hour figure assumes an end point voltage of 10.2 volts, few radios will work properly at that voltage).

A final thought. Lead acid batteries generate hydrogen gas when charging. Keep sparks and flame away from them or you can have a battery explosion. A marine battery box with an external vent is a very good idea. Using deep cycle batteries is also a good idea. If you use gell cells, you have to be careful not to exceed their rated charge and discharge current limits. They aren't well suited to high peak draw loads because of their internal chemistry. OTOH, a car battery thrives on high peak demands, but falls down when asked to deliver sustained currents. A deep cycle battery handles both conditions well.

>
>Hello people,
>
>I'm looking for good, reliable, and low-cost :-) data radio.
>I will greatly appreciate any advise and suggestions.
>Do you have experience with the Tekk data radios?

I do. I'm running 2 of them (KS900s). Good little radios,
really 9600 baud ready, not just advertising hype. I
wouldn't recomend one for mountaintop use without a stack
of cavities in front of it, the receiver isn't that selective
or robust against intermod and desense, but they're fine at
home. *Believe* the maximum input voltage spec, don't try
to feed them 13.8 volts from a power supply. They will smoke.
Use a 10 volt regulator.

Of course the KS900 is just 2 watts, but that's often plenty
if you have a decent antenna and decent path. You can drive
an amp with one. I do that for one of the frequencies I operate
because the path is cruddy (50 watt amp). Most any of the HT
amps will work, just make sure you drive the amp's external
keying line with TNC PTT rather than depending on the amp's RF
sensing to TR it. That's too slow.

Regarding placement of the HT, Cannondale and many others have a pack that rests between the handlebars. Not only is this the best place for the radio to be for convenience, the handlebars protect the HT in case of a crash. If you use drop bars you will need to remove the second set of brake levers that parallel the handlebar as it goes into the stem. Those second set of brakes are not very useful anyway providing only about 30% of the leverage that the primary brake levers provide on the forward part of the drops. You can hold about 10 pounds in that front pack which is more than enough for radio, extra batteries and more. You can also take the pack off and carry it in as you need to.

This system is much better than clipping the radio on the belt because you will not ever be concerned about it coming loose and having to adjust it while riding.

I have used a HT over 7500 miles without problems.

3186. LCD 4x20 char displays for sale .....cheap

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-23 00:00:00 UTC
From: wdunckel@aol.com
Message-ID: <19961123013800.UAA13039@ladder01.news.aol.com>
Source record: 190157

I have 4x20 character diplays for sale for $8.95 each. They are compatible with the Hitachi standard and could replace the Optrex displays. These are great for projects. All are new and still wrapped. If you are interested please e-mail me privately.

Thanks in advance,

Walt

3187. FS: BIRD 300W Continous Dry Dummy Load (New)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-23 00:00:00 UTC
From: sidener@saucer.cc.umr.edu
Message-ID: <575rej$f9k@hptemp1.cc.umr.edu>
Source record: 190158

I have a BIRD 300W-Continuous dry dummy load (New Un-Used)

This is the type that you mount to a heat sink.

Un-mounted it is rated at 60W continuous.

It uses the Bird QC type connector so you can substitute any connector
you want. This one comes with a N-connector

Freq. dc to 2500MHz

50 Ohms

Model: 8072-1

Price: $65 Plus Shipping

Thanks,

Scott Sidener N0WFL
sidener@umr.edu

3188. FS: BIRD 4410 Wattmeter with Slugs (New Un-used)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-23 00:00:00 UTC
From: sidener@saucer.cc.umr.edu
Message-ID: <575rl5$f9k@hptemp1.cc.umr.edu>
Source record: 190159

Hi, I have a BIRD Model 4410 with slugs (New Un-Used) for sale:

The 4410 is the meter that looks like a Bird 43 but has a range switch
with seven positions. It uses special slugs which are the equivalent of
seven standard Bird slugs.

The meter has N-Connectors

The slugs are as follows:

4410-4 2-30MHz (10, 30, 100, 300, 1000, 3000, 10000 Watts)
4410-5 25-80MHz (1, 3, 10, 30, 100, 300, 1000 Watts)
4410-7 144-520MHz (1, 3, 10, 30, 100, 300, 1000 Watts)

I am asking $250 for the meter and $60 each for the slugs with the meter.

If you want the slugs by themselves they are $75 each.

Again, These are New Un-Used!

I will also trade even any one of the above slugs for any one of the
following slugs:

4410-6
4410-8

Thanks,

Scott Sidener N0WFL
sidener@umr.edu

3189. FS: Fluke 77 Digital Multimeter (Un-Used)

What is exactly Xmod or intermod rejection. I don't quite understand it.
Also, what's the best, cheapest packet radio device you know of? I'm
getting my first radio, a 2m Handie Talkie soon. I have only about $300
to spend on accessories. I have a CB radio anteanna that I plan to match
for my HT so I can use it in my car or house (metal roof!)

What is exactly Xmod or intermod rejection? I don't quite understand it.
Also, what's the best, cheapest packet radio device you know of? I'm
getting my first radio, a 2m Handie Talkie soon. I have only about $300
to spend on accessories. I have a CB radio anteanna that I plan to match
for my HT so I can use it in my car or house (metal roof!)

I plan to buy a 35w amplifier because I live about 15 miles in the country
from the edge a large nearby city will this help much? . Are there ones or
could I make rig one up so that instead of connecting it directly to the
HT, I could connect it to an antenna so that the HT could use it
wirelessly?

Can any HT be used for packet radio? Also, can I decode digtal
transmissions messages and other digital messages with a packet adapter?
Can I put a packet adapter on a scanner to monitor things?

Are there computer programs that produce (maybe decode?) DTMF and CTCSS
tones (How can I find frequencies to write one if needed?) I've heard that
the radio needs direct discrimator output at low error rates. What does

this mean? Do all new rigs have this?

One other thing: If I have a packet radio adapter and someone else does, is it legal and possible to use them like modems and play computer games or other modem related software over them? Do packet BBSes have modem lines so that I can dial one up on the telephone? What ist there to do on them?

One last thing, could someone suggest a good HT for me? I won't be getting a second one for a while but would like to keep it under or around $350. I would like to use packet, voice, and autopatches on it. Are there quick disconnect connectors for HTs? I've heard the antenna connector gets loose easily after many disconections/reconnections and want to protect that.

Please email replies to me.

Thank You! 73!

I'm getting out of HF for now. This station is about one year old.
Equipment is like new - perfect appearance, function and rarely used
(that's whoy it's going). Got S-9 from Japan 2 or 3 times. All this
equipment comes in it's original boxes and protection (excepting R-7).

Current New Price Full Station

Kennwood TS-870 $2,299.95
SP-31 Speaker $99.95 Perfect match for 870 in size, style.
MC-60 Mike $139.95 Has preamp, up, down.

MFJ-949-E Tuner & Dummy Load $149.95 Works well, usually shows 1.1 to 1.

Palomar M-840 LCD SWR Meter ~$175.00 Lew McCoy Recommends! Makes tuneup
easy. two vertical bars, one SWR,
one Power that show
simultaneously
as you tune up

Bencher RJ-1 Hand Key Black $74.95 Never used for QSO
YA-1 Lo Pass Filter $59.95

Cushcraft R-7 Vertical $379.95

Plus all in shack cables 0.00

$3,379.65 All for $2,600

Or make offer on what you need, piece by piece.

Please contact Dave Kay, AB7FV at kham@halcyon.com

I have used a similar unit (the S.E.M. QRM Eliminator). It is *great*, but, of course, it only works on QRM you can distinguish; i.e. the QRM is stronger on a vertical antenna compared to a horizontal antenna.

I have found it particularly useful for eliminating RFI from my computer(s). The main antennat is outdoors, but putting a reference antenna close to the source of teh QRM on the reference input of the QRM Eliminator makes it possible to reduce the noice from S9+ to S2.

It is really an amazing impact. The only thing you have to keep in mind is that the ratio between the QRM and desired signal has to be significantly different on the two antennas. This means that you likely won't be able to eliminate *all* sources of QRM at the same time. Nevertheless, it is one of the most powerful means of redicung local QRM such as computer noise, flouescent lights, High Voltage Line noise, etc.

A DSP is great, but it does not even come close for some types of noise.

Jason,

Don't buy their 6m and 2 receiving converters. They are very poor performers. For 6m, I much prefer the Ten-Tec kit. It has a much better sensitivity.

The 2m transmitting converter is pretty good, although it seems to have a lot of unwanted signals. In all fairness, I did not have the best instruments for tuning it up.

It was still fun to build their kits and I learned a lot.

Clint - it seems to me that you are _assuming_ that there will be significant interference problems. Obviously this is possible, perhaps in rare circumstances but, given the mandated low power, antenna restrictions and very low deviation on FRS, how probable is this? Remember that biz-band with all its trunking or other repeaters are at much higher power and potential coverage. 470 MHz or so is only fair for very short distance communications, which is what FRS forces.

I think your fear is a non-issue. Miniscule number of possible exceptions shouldn't drive "wants" by other users for "clear channels". IMO, repeater providers have a much bigger challenge in dealing with intermod products, coverage overlap, etc. The whole bb service would be useless without repeaters.

> get yourself a HT 5/8 whip and mount it to a BNC clip on system found in
> most radio catalogs.An article in QST describes a a 2m j-pole attached to a bicycle safety flag
fiberglass mast. It has all the gain you can ask for and is almost indestructable. It only costs the $5 or so $$ for the flag, some coax, TV twinlead, and a connector. I used 75 ohm stranded coax for the most flexibility but it is difficult to attach to a twist-on connector. Since my first attempt had an SWR below 1.8:1, I didn't try to improve anything. Using clear twinlead and white tywraps on the white fiberglass makes for a very unobtrusive antenna -- Except for the coax leading to the HT when in use, it looks just like any other bike flag. Have Fun!

Mike, N8XZF/bicycle mobile

Source record: 190028

Would like to hear from anyone that has found a better solution for the plug-in scanner antenna on the 2SRA combination 2 meter ham rig & wide band scanner. This radio has two antennas - a BNC for the 2 meter receiver and one with an earphone-type plug on it for the scanner side. I have lost several of these plug-in antennas while it was on my belt. Had had several others break off in the jack. Just talked with another ham that has had similar experience. These are not cheap to replace. Has anyone come up with something better (or even a source of cheaper-than-ICOM replacement antennas)?

Does anyone have info on modifying the TS 870 8.83mhz and 455khz-3.1khz filters to say the IRC 2.1 or 2.7 khz 8 pole filters to help the filter blow-by problem(particularly during contest periods)It seems I heard some info on this but have not been able to locate it.Thanks 73 Lloyd W3NF

3209. FT-50R 30khz steps?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-24 00:00:00 UTC
From: CSupak <csupak@ucla.edu>
Message-ID: <3298F752.1F40@ucla.edu>
Source record: 190030

Okay, I can see that the radio will do 15k steps in Vhf but will not
do 30 or 15 in Uhf or 800. Ideas anyone?

Thanks

--
First they came for the hackers. But I never did anything
illegal with my computer, so I didn't speak up.
Then they came for the pornographers. But I thought there was
too much smut on the Internet anyway, so I didn't speak up.
Then they came for the anonymous remailers. But a lot of nasty
stuff gets sent from anon.penet.fi, so I didn't speak up.
Then they came for the encryption users. But I could never
figure out how to work PGP anyway, so I didn't speak up.
Then they came for me. And by that time there was no one left
to speak up.

3210. Need an Article for a Newsletter?????

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. (I have Thanksgiving week off)

Source record: 190033
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

The Motorola antennas will NOT work with the Yaesu...they are SMA (as on the Visar), but they are male instead of female...

I rather like the Icom FA-S270A, is small (about 3") and works great on 440.. 2m performance isn't as good as the stock antenna, but if you're working strong repeaters or close-in simplex, it'll be fine. Price is right, too, $18 from Icom parts.

The next closest denominator is 10. Turn the squelch up a little bit
higher. You still may have to move the tuning every once in a while.

> it for packet operations. Any help would be appreciated.

Kevin,
It's the HTX-202 for 2m and the HTX-404 for 440. I have had the 202 for
5 1/2 years with no problems. It's a very good unit and VERY reasonably
priced.
There is no MARS (or any other) modifications that can be done to the RS
HT's...
A while back there were supposed MARS mods floating around, but they
were hoaxes, and if you implemented them, they would render the radio
useless.

Mine serves as a HT, Mobile in the car, and my home base/packet radio.
Check out http://www.tapr.org/
They have schematics for connecting TNC's to radios... their schematics
work great with the RS HT's... Also, http://www.radioshack.com/ has a
support link...
Follow it to personal communications, then to 2 way radios... they list
the HTX-202 and 404 with packet hookups, specs etc.

Later,
Dave

My line noise was S9 on 80m daytime - there were actually stations down in there I couldn't hear before! Now the noise is maybe S1. Great for line noise but the phase of thunderstorms changes so much it isn't a replacement for the noise blanker.

A pal o' mine picked up a British military receiver at an mil-surplus store this week. He's looking for any information or documentation available for this unit. He says it sports the following labels and connectors:

"RACAL Communications Ltd., Bracknell Berkshire, England"
"HF/VHF receiver RA1794"
"Options: HA S2 S S/N=30"
Two 10-pin sockets: "audio 1, audio 2"
N-type RF connector
35-pin socket on lower left hand front panel marked "control"
4 BNCs on bottom: "IF 2, IF 3, Video, Ext Std"
4-conductor power plug larger than BNC
Soft keypad w/ radio functions, plus standard numeric keypad
AM/FM/CW/USB/LSB
BFO
"BW+," "BW-" controls

Have any of you ever seen anything of this description?
Any information will be appreciated.

Please reply to jbs@rti.org

Thanks!

Have a question for those in the know with NiCads...

I have, over the years, owned several different Ham band HTs. On the first one, I took all the "normal" precautions to avoid NiCad memory effects (ie complete discharge before recharge, etc.).

On later units as well as on the many other devices that I own (several power tools, a beard trimmer, two cell phones, a vacum cleaner, wife's electric mixer, and so on) with NiCads, I have taken no such precautions.

Perhaps the beard trimmer is the best (worst?) example... I lift it from the charger, use it maybe 5-10 minutes, and drop it back in the charger. This has been going on for three years now. The other day, I decided to let it discharge completely. I took it from the charger, mowed my face, and set it on the counter while running... Over an hour later, it was STILL running!

I have read articles from those claiming to be NiCad "experts".... Some claim there is no such thing as memory in "modern" NiCads. Others claim that this was and still is a major problem.

Just what is the current wisdom?

From my own experience, I would say that memory is a myth.

Take Care & 73

Look at the IC- 228H, 229H and 2000H although the first two are out of
production they will all fit your requirements

Don't try to use the CB (11 Meter) antenna with a 2 Meter transmitter.
It won't work without extensive modifications, and it could wreck your
HT. A quarter wavelength on 11 Meters is about 8 feet. A quarter
wavelength on 2 Meters is about 20 inches. Get the picture?

No the LAW has been on the books since 1993. Most of the current crop of Amateur HTs also do not offer cellular coverage. If they do, they run a chance of loosing the FCC type acceptance that applies to them. You see all Amateur receivers that operate above 30 MHz must adhere to FCC Part 15 rules. Generally 99 % of the Amateur receivers are type accepted as scanning receivers because that is the only place they firt into the Part 15 rules. So they also get caught up in the cellular receiving ban.

From: "William O. Reichert" <billnihh@apci.net>
Message-ID: <578qmc$2l0@queeg.apci.net>
Source record: 190127

I notice very little improvement using the 1.9 ssb filter. If you work cw, stick with the narrow cw filter--in fact get the 250 hz job and add the DSP. There is so much filter blow by that narrowing the filters doesn't do as much good as one would normally expect, plus the 9Mhz filters in the 706 aren't as sharp as the 455 kHz filters cascaded with the 9 MHz in some of the other ICOMs. The DSP or even an audio filter will help get rid of the audible high pitched squeals getting around the filters in cw. These don't seem to be as noticeable with the narrow filter on ssb, I imagine because the crud getting around the filter isn't a single tone, so it just sounds like an increase in the noise floor.

>>
>> What are people's opinions of the
>> earbud-mic arrangement?

It's probably the most convenient, but also probably has the worst
sound unless you get the professional stuff which is very expensive.
There are many alternative mics/earphone arrangements on the market so
just try to see which fits best. Important factors are wind noise,
obstruction w/ helmet, convenience (no hands off the handle bar is
best), and quality of sound on both sides.

>>
>> * What is the best way to secure my HT to the bicycle? Ideally, it
>> should be easy to attach the radio to the bike and easy to remove it. Or
>> is it easier to somehow attach it to myself or my backpack?

At first I was thinking of strapping it on the handle bar so I can
control it. A friend told me that if I dropped my bike, that could
make damages to the radio. Now I think I'll put it in a bag or just
leave it on my belt or pocket.

>> * I think a simple dual-band mobile-style antenna would probably be
>> the best way to get out. My bicycle is a mountain-bike style and I can
>> easily get a
>> rack to fit over my rear wheel.

Try to find a very long dual-band handheld whip, which has to be very
soft, light weight, and flexible. Try to find a ground independent
design, or 1/2 wave on the 2m side. As the other guy said, it'll be
tough to mount the bike (I had that problem even w/ a 19" whip!!), so
if it's a BNC connector then it's just a matter of taking it off
before mounting the bike. An hand-adjustable angle mount will do if
you can find one.

>> Is there a mobile antenna mount that
>> would easily and securely attach itself to such a rack? Can anyone
>> recommend a particular antenna/mount combination?

Try to find some "mirror" mount and modify it. A trunk lid mount will
also work too. It depends on your rack a lot.

>> Anything else I should keep in mind?

Use RG-174 cable because it's very thin. My only problem w/ the setup
is that everytime I got off the bike I had to remove the antenna
cable. A fancy option is to use a crossband repeat capable handheld
on the bike, and use a small radio like the Standard C108 or C508 on
the body, and repeat via the bike radio.

From: daveb@buffnet.net
Message-ID: <579h5h$m4b@buffnet2.buffnet.net>
Source record: 190184

Greetings,

Can anybody recomend a good reference book on testing of receiver/transmitter performance. A lot of material seems scattered about in old Ham Radio magazines and ARRL handbooks. RF Design and RF & Microwaves sometimes talks about test but, I havent come across a book targeted for the RF test engineer types.

BTW: Someone who can place back issues Ham Radio on CD ROM today could make a bundle. Some of the best technical articles I have seen are in those moldy old pages.

The kind of testing I'm interested in would be noise figure/sensitivity, IP ,dynamic range, SINAD etc...

I guess I want to be a RF test engineer some day.....

Thanks for any ideas

Hello and thanx for reading this posting.
I have a mint TM733A dual band 2m/440 mobile radio.
It has a detachable face, 50/35 watts VHF/UHF.
I am including with it the following items:
External duplexer
Detachable face kit
external speaker
dual band Larson mobile antenna.
9700/1200bps data cable for packet
All original baxes, and manuals
The radio has all the bells and whistles, and a total of 70 memories.
Absolutly MINT. All for $525.00 obo
Call (803)695-3624 or e-mail n7unh@juno.com

The Standard C-108A 2m h-t and its dual-band cousin use SMA rubber duckies,
so replacements are probably available. I don't know a specific source.

This goes way back. About 1970-71 the NOrthern
Virginia Radio Club built 10 2 meter FM tranceivers
based on Hamtronics boards. It was my first FM rig,
and all of them got on the air successfully with little
effort.
I met the owner several times at Hamfests. He is very
sharp guy and must be honest or he'd a been out of
business by now!

One would assume that he is talking about the more typical base
loaded CB antenna, IE K40 style. These are easily modified to
become 5/8-wave 2m antennas. Several articles in the magazines
have detailed how to do it step by step. A half hour's work can
turn a bit of free CB scrap into a useful 2m antenna. (Though
unless I already had the CB antenna and hardware, I'd just pay
MFJ $19.95 for their 2m magmount antenna and call it a day.)

I wouldn't do it. The 500 Hz filter is useful (for data anyway, I don't
do Morse with the radio), the narrow SSB filter isn't enough different
from the stock filter to be worth adding. An external DSP unit, especially
one with a good denoiser function, would be a better investment.

3273. Using a transverter with an HF transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-24 00:00:00 UTC
From: tgold@microvst.demon.co.uk
Message-ID: <848854013snz@microvst.demon.co.uk>
Source record: 190202

I'm trying to figure out the wiring between a transceiver (an Icom 765) and a VHF transverter, and the Icom manual is amiguous on some points and silent on others.

The manual claims that imposing a (2 to 18v) control voltage on the defined control line will enable the low level output of the transceiver (about 1 mw) but later the manual claims that *removing* that control voltage will enable that same low level output connector as an input, which sounds contradictory. I would have guessed that one preserved the control voltage and simply place the tranceiver into receive. Also the manual is silent on what happens to the main antenna connector, and whether that will still be sensitive to input signals and possibly allow through interference at frequency of the tunable IF (28MHz) of the transverter.

I'm a long way from this gear with only the documentation to go by, so simple experimentation is not possible at this time.

Has anyone done this and is able to clarify how to use the low level connector for BOTH input and output and also whether I need to terminate the HF antenna connector.

And any differences if the transverter supports separate input and output connectors? Does one then use the low level transceiver output for transmit and the regular antenna input for receive?

TIA and Regards,

FS: Icom 751A & AT100

Icom 751A, 100 watt transceiver, 10 through 160 meters, General Coverage Receiver with CW filter installed, SM-6 desk mike and DC power cord. The radio
has never been mobile. The optional internal power supply is not installed $650.00.

Icom AT100 matching external automatic antenna tuner with control cable to connect to other Icom Radios $225.00.

The units are in very good condition, I guess they could be classified as near mint, with manuals, however I don't have the original boxes.

Sell both for $850.00

Prices include shipping.

NiCad memory isn't a myth, just misunderstood.
Battery memory won't develop unless the battery is discharged
to the exact same level each time. Few applications do this,
most are random. Perhaps something like an outdoor lawn light
triggered by a timer, using nicads and solar cells, would develop
memory.

3290. SGC tuner on a motorhome???

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-24 00:00:00 UTC
From: gbohner@aol.com
Message-ID: <19961124225000.RAA29177@ladder01.news.aol.com>
Source record: 190219

Is anyone using an SGC tuner on a motorhome?

If so, what are you using for an antenna and how well does it work? If you are using a wire around the top, do you have aluminum MH sides or fiberglass? I have aluminum. What is the shape/dimensions of the wire? Do you recommend this as "the" solution for a motorhome antenna? I think it would work pretty good if I could find a long (10+) foot whip that I would swing up when parked. ANyone know where to find such a whip?

I have been using an Outbacker Perth. I am not real happy with it and I have a very narrow bandwith. Since I would like to work both pactor and phone (at opposite ends of the band), I have a problem.
Tnx for your advice.
Guy, w6ljl

I had bought the Comet last week and I like it. Most of the improvment is in the 2M band. On my Yaesu FT-50R my S meter goes up about two or three dots. Hope this helps.

3299. Re: Help with TR9130 pin out?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-25 00:00:00 UTC
From: Brian Kline <kline@hybrid.com>
Message-ID: <329A7AAC.12@hybrid.com>
Source record: 189828

I think that 8C stands for 8 volts continuous. No connection is required
to this pin in your case unless you need power for amplifier in the mike.
The touch tone pad was probably powered from this line.

I suspect that the reason the output level in SSB mode is lower with the
new mike is the new mike has lower output.
In SSB the average output level is proportional to the average input level
so lower mike output translates to lower power output.
7 Watts on audio peaks read with an average reading watt meter does not sound
bad for a 25 W radio, but you may want to check the service manual for the correct
procedure to adjust the SSB mike gain.
As I remember there is a pot inside to adjust the SSB mike gain but none
for the FM mike gain. The factory FM mike gain was way to high and my audio
was always into limiting on FM so I added a pot to adjust it.
This is probably why you did not notice a change in audio level in the FM mode,
because it was already into limiting.

Haven't seen any mods or evaluations of the 3 band mobile rig...

Is this a dog or what??? Can the 220Mhz Tx be turned on???

Don't care if it goes "C" or not, just seems a shame to miss that
4th band, for a great all around rig... [if it works out that way?]

Either that or Standard is not a popular brand. <???>

Any owners out there?

Only if they still intend to use them as marine transmitters.

80.203 says that you can only have marine channels programmed into a
marine transmitter. If you modify radio to work elsewhere you will blow
the type acceptance. In addition, a general radiotelephone operator's
license or a first or second class radiotelegraph operator's certificate
is required for anyone that makes internal repair, adjustments or mods
to a marine transmitter, including VHF.

>It has 2 "Vibrasponder" crystals one 349.0 mhz and the other 368.5 mhz.

Hi Scott...

Well, I assume that you're talking about the good old Motorola voice
pager? If so it is probably quite similar to my Minitor pager.

I might be wrong, but those two "crystals" are probably not what you
think. Are those "crystals" large rectangular boxes?

If so then I would assume that they are tone Reeds set at 349 hz and
368.5hz. When these two audio tones are sent over the radio frequency
your pager is set for it triggers a beeper and opens the squelch.

Typically the duration of the tones are 1 second for the first one,
and 3 seconds for the second.

>What are the crystals that were/are available for the pageboy?

Depends if the pager is "Low band" (35-50MHz) or "High Band" (around
150MHz). Look for a crystal inside the pager.

>What is the voltage of the battery?

It requires a special battery, check with Motorola on that, I don't
know that model well enough to tell you. Are they 2 small batteries?

>What is the A & S jacks on the front panel

Just a guess, my old Minitor had a jack for external "A"ntenna and
external "S"peaker.

>Does it use CTCSS? If so how can I tell what it is set for?

Nope, no CTCSS in those old pagers. As I said, they were set off by
reeds.

Hope this helps.

Make sure none of the tuning coils visible through the large collection
of holes in the bottom are broken. If so you have a nice boat anchor.
The coils are not available. Otherwise it is an excellent rig for
starting out. Works well and is stable. No bells and whistles but easy
to operate once you figure out how to tune it.

3318. Help with TR9130 pin out?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-25 00:00:00 UTC
From: baack@maine.edu
Message-ID: <57cdvv$1q0g@sol.caps.maine.edu>
Source record: 189985

Greetings,
I am trying to hook a different mic besides the current DTMF hand mic that I have for the Kenwood TR9130. However, I have come to find that in the manual there is a pin labeled

8C ? What should be connected to this pin.?
I connected a mic to the #1 pin (mic) and #6 (ground) with a foot pedal connected to #6 (ground) and #2 (standby) to close the circut.

On FM the signal has no change, however on ssb, the signal has a noted drop in power output on the voice peaks. (4 - 7 watts, new mic,) (8-12w old)

My guess is that the pin labeled 8C has something to do with it...
Help??

-uses of the PAGEBOY. I purchased one with a charger and a dead battery.
-It has 2 "Vibrasponder" crystals one 349.0 mhz and the other 368.5 mhz.

I don't know about the Pageboy, but we just changed vibrasponders in our
Micor... Those frequencies are hertz, not MHz. They are used for tone
decoding; sounds like your receiver needs two tones in the right order,
one at 349Hz, the other at 368.5Hz.

These are actually resonant vibrating reeds, not crystals.

#
I don't know about the Pageboy, but we just changed vibrasponders in our
Micor... Those frequencies are hertz, not MHz. They are used for tone
decoding; sounds like your receiver needs two tones in the right order,
one at 349Hz, the other at 368.5Hz.
#

The Motorola Pageboy is based on the old two-tone paging format that
almost no one uses any more. Might check with a small Fire Department
some where and see if they want it. The encoders in use now are all
digital as is the decoder in the pager. {The Pageboy is a nice paper
weight..... :) }

>noise floor.

While I agree that the narrow SSB filter is a waste of money,
I don't agree with the advice to get the 250 Hz narrow filter.
Its too narrow for data, and it rings too much for comfortable
listening to narrowband signals. A DSP box can offer narrow
FIR filters (down to 50 Hz) which won't ring. Cascaded with
the 500 Hz filter, this makes a nice combo. And a bit more
audio amplification and an external speaker doesn't hurt the
usability of the radio either.

BTW I think too much is made of "blowby" in this radio. While
I can hear a bit of that, it isn't enough to affect the AGC,
so the fact a DSP box would be outside the loop isn't very
important. It'll still clean up the signal without pumping.
Even the el cheapo Radio Shack DSP makes a worthwhile difference.
(I expect something with real noise reduction would be even
better.)

Hello Newbie,well I suggest if you first get your no code tech,which is not too hard (books at ham radio stores) and get your license,I am a V.E.C.,or use to be any way,now the V.A. Radio Room is closed ,that you get a HX202 from Radio shack,if you can produce a license,they will sell you one for about $200.00,it has 5 watts,or 1 1/2 watts and can be used on the two meter ham band,VHF 144.000-148.000 MHz FM ,there are many repeaters there in range of your unit (80) miles to link you much further,I am in the L.A. basin and we have mountains all around with standard repeaters on them,that I can link to Mexico or to SanBernideno or up to Santa Barbra,with 1 1/2 watts,it is amazing but true,The HX202 is a good starting out radio,take some time and learn how to use it corectly,that is about it OM WB6MCF out

I recently purchased the HTX-212, which has now been replaced by the HTX-242. (Basically the same radio with some added features - including the price!). This radio comes with a MARS/CAP frequency range of 143.000 to 149.000 xmit range and a 136.000 to 174.000 recieve range. By holding down the F + DTMF buttons upon turn on of the radio, you can open this extended range up. I also plan on using this radio for MARS. It also can be used for packet as well. I'm very satisfied with this radio, I would suggest buying the HTX-212 if it is still available in your local RS, since it is cheaper than the HTX-242.

I am looking for the following Collins KWM380 accessories:

KWM-380 Accessories

AC-3801 Noise Blanker
AC-3802 Speech Processor
AC-3803 Control Interface
AC-3804 AM Update Kit
AC-3807 High Stability Oscillator
AC-3808 General Coverage Option Kit
AC-3813 6.0 KHz AM filter, or
8.0 kHz AM filter

KWM-380 Service Bulletins that I am looking for:

SB-10 Add WARC band transmit
SB-16 Improve frequency synthesis

KWM-380 Service Information Letters

2-84 Product Improvement - To substantially increase SSB
talk power and improve VOX operation stability.
1-88 Product Improvement - To prevent receiver front end
filter select diodes A3CR800 thru CR807 from being
damaged or blown by T/R relay A2AK1 switching
transients or large voltage spikes produced at the
receive input.

Does anyone know if the KWM380 accessories are still commercially
available?
If so, where?

Thanks

Price is about $50 high depending on condition. Cover 160-10 ham bands
only. Good tubes puts out 100W plus on all bands. Mfg in late 70's. Be
careful about broken coils on the bottom. They are not available.

The 8C line is 8 Volts out to power the DTMF pad. Difference in power is
probably the difference in the mike output levels between the old and
the new.

Hello DSP freaks

I have just purchased the EZ-KIT lite from Analog Device (ADSP2181 and AD1847). The EZ-KIT contains the source code for four FIR filters (FIRDEMO.DSP), but I do not know how to calculate the equiation weights or what ever it is in the four files fir1.dat, fir2.dat, fir3.dat and fir 4.dat (containing a lot of hex-digits). Do enybody know how to do?

Do you further more know how to build notch filters - the equiation...

Any source code for solving the above will be pleased...

Yours faithfully

Bjarke Korsgaard

I've tried the standard headset/PTT setups put out by the manufacturers
(Kenwood in my case), but found that they didn't last very long for
hang gliding. The wires are just too wimpy and you don't really want
a metal band going across your head UNDER your helmet. The wires can't
take all the flexing that occurs in flight and when you fold up your
harness and radio gear. I parted out a speaker/mic and find that the
coiled cord is ideal for our purposes. I placed the speaker and mic
just where you said and finished the wiring with two quick disconnects
at the back of the helmet- one main connector and another which shorts
two of the wires for a PTT switch. The radio and wiring stays with the
harness and you just need to make two connections to the helmet when
you suit up. It's very robust and the speaker/mics are cheaper than
the headsets, I believe.

Dave, are you signed up for the hang gliding mailing list? There's a
wealth of knowledge there, but a lot of posts. To sign up, send email
to: hang-gliding-d-request@lists.utah.edu with: subscribe
as the subject line.

3348. TH-79E QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-25 00:00:00 UTC
From: pnb1eng@mail.telepac.pt
Message-ID: <329a02fb.2044589@news.telepac.pt>
Source record: 190015

In a hamfest I saw a TH-79E and this radio transmitted 144-146 and 430-440. The difference was when i got to 145.995 , instead of going back to 144.000 the radio kept on going up, receiving but would not transmit (it beeped). I took the CTCSS cover I found the green wire cut. This guy said the ham who sold him the radio did this strange mod just using the keypad (before the keypad mod the radio was transmitting broadband).
I have a Kenwood TH-79E and I would like it to receive only. It is modified and can transmit.
Can you explain this? I never heard about this before.

(sigh) Here we go again...

'Most of you probably know' this is BS.
For the umpteenth,m penultimate, unprintable, time,
You Sir are Lying!.
Please cite the specific law paragraph for you statement that posessing
such an amplifier is a 'violation of federal law.

IT IS NOT ILLEGAL TO POSSESS ONE.
It is not illegal to even use one if you are licensed and stay within
your assigned (10m) band(and of course don't splatter etc.
It is not illegal to buy one, or (if you are a private party) sell one.
It is not illegal to build one. If you build more and sell them then
that's illegal because you fall under manufacturing rules then and
type acceptance.

And don't tell me that "it's obvious what he wants to use it for"
YOU don't know what he's thinking, nor have you any right.
You're not a cop , and the thought police that love to try to run 20m
haven't yet managed to take over.

You owe him an apology for being a nosy busybody.
Go back to your own knitting.

If you want, (I know you won't) you might want to brush up on the
FCC RULES. (Part 97.313, 97.315, and 97.317)

The end NEVER justifies the means and you do nobody any good lying
about something that is so easily checked by jumping over to the FCC
Home page.

Brian,

I have one anf have been using it for the pastweek and a half. I just
past my 1a,2,3a,3b for tech plus with csce for general .I'm using it at
different rates to get over that memorizing and dot/dash counting. I'm
not there yet but I can read individual characters up to 40 wpm. I gets
a bit more problematic when I start combining characters randomly. The
volume on it is fine for sitting some where without a lot of noise but
it gets a little difficult to here (sort of like a DX), when traveling
at highway speed in my pickup truck. For those time when noise is to
much I use the headphone feature and it is quite clear. I found a quirk
that is no real problem just annoying sometimes In the interactive
setting. I f you need to Know give me a line at my E-mail addr.

Hello,
I am trying to identify some older Harris PC network cards which have
come into my posssesion. Here are some particulars about them:

- they have Lanier Network BIOS 2.6.30
- identifiers '108NIC', '88NIC', and '92-003904-00' on PCB
- ISA cards
- 2, 8-pin dip switches , and one red and one green LED on back
- 9 pin DB connector with some sort of convertor attachment to a BNC
connector on back also
- a 80188, some sort of Zilog serial controller (Z0853008PSC), a
couple eproms, and other assorted logic on board

If you can identify them, I would appreciate being enlightened.
Thanks in advance!

Dave,
It's real old. 15 years of more since they first came out. I had one
before the WARC bands were added. Not a bad rig. 6146 tube finals --
rugged. Also tube driver. Price way too high in my opinion. But listen
to other replies for more accuracy on that.

This is very similar to the mounting method that cycle couriers use here for their radios. I stick my ht in a pocket in the side of my bag at the moment with a 5/8-1/4 antenna on it. A gellcell in the back adds some omph!

>I do not like the little bug speaker/mic that fits into your ear. I

>it gets caught in clothing and is pulled out, or you move your head
>and once again it is dislodged. If there is a headset/boom mic
>arrangement, I think it would be better.

I am still looking for a headset that fits comfortably under my helmet (which are required by law in NZ; not wearing one can cost $80 and is stupid to boot!). I have had limited success with a throat mike and earpiece. I made an extended PTT that was attached to the handle bars.

>I am lead to believe that you need an external antenna on your bike
>and the rubber duck would not reach out the way you wanted. I have
>mounted a 1/4 mag mount on the bike rack that fits over the rear
>wheel.

I have made a mount that bolts onto the bike frame down at the rear axel (since the frame is rather tough there). I have a 5/8 that I want to try, but as some people have suggested, a 1/2 may be better.

I'm also interested in one, but not for a while money wise. It's an incredible charger. It's a rapid charger, but it takes cups for radios, so you buy one charger for $70-$90 (going rate for a rapid charger) and you buy cups for $20-$40, and you can for $160 or so have 4 or 5 chargers! You just swap cups. They also make for $500-$600 a 6 slot gang charger, can charge any 6 batteries in 1 hour total.. I dunno about their quality, but I've heard nothing but good things. Plus, for about $50, you can add an analyzer I think, shows the batt's capacity, how the nicads are, etc..

The price has been lowered. I need to move the Kenwood TM721 and TM731 transceivers. Both are in great conditon I just have to many dual banders. Asking $350 for the 731 and $325 for the 721. E-mail or phone is OK at 307-638-3441.

Thanks

Hi:
I bought one of these radios in January or February of this year. It stayed in the car till September. Thats includes one long -30 deg winter as well as a hot summer(2 weeks!) The radio works well, I receive good audio quality reports with it, and it sounds not too bad for a two inch speaker. I have since added a small external speaker like the ones sold to go with walkman type radios.
I used the radio AFSK in the CQWW RTTY contest this year running low power to feed an amp. The enhanced LSB mode worked great. The only problem with using it in the shack is that you tend to want to fiddle with the knobs, and they are too small.
I have had a couple of problems with it and I think they are vibration induced. I am sending it back to Alinco to check it out this time. By the way, I have had to deal with the folks at Alinco in CA. before and they are helpfull and eager top please.
Bottom line: No regrets.

I recently bought an old Heathkit Cheyenne tube transmitter for hams, and I plan on restoring it. It's missing the mobile power supply, however. I need a power supply that runs off 12 volts input and puts out 300 volts at 50 milliamps AND 600 volts at 110 milliamps for the 6146 final amp tube. Must have a 6 pin Jones plug for output, and probably should have pos/neg alligator clips so it can be hooked directly to a car battery. Mail moo@midtown.net.

Well not quite "legally". You would not legally be able to use
transmitter in the marine service if it has frequencies for any other
service programmed into it.

> From my own experience, I would say that memory is a myth.

I don't consider myself a battery expert but since my customers need the information I have done some research on Ni-Cad care.

"Memory" is not a myth. But it is very rare. It takes many, identical discharges to induce a real "memory" into a Ni-Cad. Even when "memory" really is the trouble it can usually be corrected with a few full charge cycles.

What many people experience and try to blame on "memory" is a loss of capacity usually due to something else. Things like undercharging, long term overcharging, a damaged battery (reversed, shorted, or vented cell) or perhaps just a battery that is not right for the demand.

To keep it to shavers. I used to charge mine about every five days or so. Leaving it on the charger all the time would cause it to stay pretty warm. And heat is a prime enemy of a Ni-Cad so opted not to leave it charging all the time - it lasted 6 years!. However if the

charge rate is low enough (usually C/10 or less), the battery can
usually dissapate enough heat for it not be too much of a problem.

> Cliff Buttschardt K7RR ex W6HDO Morro Bay, CA cbuttsch@slonet.org

Balancing the zero signal anode current ('ZSAC) is probably more important
because if you don't have at least 70mA of ZSAC per anode, linearity will
suffer. However, if more than 100mA of ZSAC is used, heat becomes a
concern. As long as the ZSAC in one tube is at least 70mA and the ZSAC in
the other tube is less than 100mA, there should be no problem.

just recieved info from a source at icom that this spring they will release the ICOM 708. Basically it is a Icom 706 with 440 mhz added. The radio will allow you to ad two optional filters and the power levels will be increased on 2 mtrs and 440 mhz to around 35 watts.
the main body of the radio will also be deeper. The estimated "street price" will be about $1500 us dollars. Also, I was told in person by a Yaesu rep. that they will have a similar radio around june 1997 to compete with the 708. He claims that yaesu and kenwood sales of low priced HF rigs such as the TS-50 and the Yaesu Ft-900 have fallen by the wayside. Yaesu now gives you a free collins filter to keep the Ft-900 moving. This should "buy" them time the the Yaesu "708 equivelent" appears in June 1997.

3390. Xtal for Heath SB-401

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-25 00:00:00 UTC
From: Daniel_F._Stiles@ushmm.ORG
Message-ID: <9610258489.AA848942922@ushmm.org>
Source record: 190076

Hi all:

Looking for a hetrodyne osc. crystal for an old Heath SB-401 being nursed back to life for school club.

Looking for the 40 meter xtal. It is 15.895 mhz and was part of the accesory kit that made the 401 a stand-alone transmitter. That is all I know. The Heath manual is rather scotch on information about it.

It is NOT an FT-243 holder and I am not quite sure if HC6/U is the proper description. It looks like the small xtals used in the early days of 2 meter solid state rigs (Drake TR-22, Regency,etc. guess I'm showing my age) but, about twice that size.

Thanks in advance

Dan, KB1BG

> Steve VO1SLP

Hi Steve,
I have had 3 or 4 735s, nice rig. Here are some stuff on
on the 735 I have...

73,
Boyd
N6DMF

IC735

icom -735 unlock mod.....

you simply cut diodes d33--d34

that are standing on end near the

microprocessor section toward the

rear top of the radio.....

thats all.....
from wb1gob RELAYED BY N0KGX...GENE

IC735.1

ICOM735.MOD
Subject: IC735 Remote Working
Hi All,
I have finally got the remote control working on the IC735.
The interface is home-made and uses just 2 transistors, 1 diode,
5 resistors, DB25 and a DB15(to get 5v from games port).
The software is a major re-hash of VK7TM's FT757 effort in ARA.
All functions are driven from the XT keyboard and the software
allows scanning of a LARGE number of frequencies on the same or
on different bands.
The trials and tribulations of all this effort were NOT assisted
in any way by the manufacturers local office in Melbourne. A call

for information was not very successful. (try it and see!)
If you are contemplating the idea of turning your IC735 into a
multi-channel HF scanner, I may be contacted @ VK3YZW BBS..
The software is suitable for use with XT/AT Clone...
Available control functions:
Send a new frequency to the radio from the keyboard.
Send a new Mode to the radio.
Select VFO A or VFO B.
Select a different memory channel
Enable the selected memory channel
Write current Freq/Mode to selected memory channel.
Write current Freq/Mode to last used VFO.
Read/Edit/Use a frequency file from Disk.
SCAN frequencies in a frequency file.
The frequency files contain frequency/mode/description of station
all of which is displayed on the screen when the file is active.
73, Bob VK3CDE

RELAYED BY WB0SEN

IC735.2

IC-735 Modification NOT Verified.
D89 by IC25 on the MAIN board appears to be connected to the
'MUTE' line on the microprocessor. According to the Shop
Manual, the purpose of D89 is to disable the transmitter
outside of the HAM bands. Again, I have not verified this
yet.(The Shop Manual arrived after I figured out the purpose
of D89 from the schematic that came in the Owner's Manual
so I am reasonably sure about my findings.)

H.J. Kirchner KI6KD

Model: IC-735

Division: Amateur

Note: This service bulletin is meant for technical per-
sonnel with experience working on solid state com-
munications equipment. Damage caused by im-
properly installing this modification may cause
ICOM to charge for subsequent repairs to the
product. ICOM does not warrant this modification.

Bulletin #: 28Oct-010

Subject: If the PLL goes out of lock at high temperature

Procedure

1. Replace R163 (3.3K) on the PLL board with a 1.5K resistor.

Bulletin #: 03088-001

Date: January 30, 1988

Subject: Removal of CPU clock noise on 29 MHz

Procedure

1. Remove top and bottom covers from the radio.

2. Remove the PA section from the radio.

3. Remove the connectors from the PL board and remove the board from the radio.

4. Remove C10 from the PL board and replace it with a 15 pf 50V capacitor (ICOM P/N 918-01517).

5. Remove C11 from the PL board and replace it with a 12 pf 50V capacitor (ICOM P/N 918-01515).

6. No adjustment or alignment is required.

7. Reassemble the radio.

Bulletin #: 8688-001

Date: March 26, 1988

Subject: If there is CPU clock noise on 29 MHz

Procedure

1. Remove the top and bottom cover from the radio.

2. Remove the PA section from the radio.

3. Remove the connectors from the PL board and remove it from the radio.

4. Unsolder the cathode end of D4 and bend the anode lead on D4 so it is sticking straight up from the board.

5. Install L97 (ICOM P/N 924-01948) in the hole where the cathode of D4 was removed.

6. Connect the free end of L97 and the free end of D4 and solder.

7. Reinstall the boards and covers on the radio.

Bulletin #: 13100-001

Date: May 10, 1989

Subject: Elimination of chirp in CW mode when operating a wide split

Information: This modification was incorporated in all IC-735s after S/N 16801

Procedure

1. Remove the top and bottom covers.

2. Remove the main board.

3. Add a tantalum capacitor 1.5 mf 35V with the positive lead to the collector of Q42 and the minus lead to the emitter of Q42. The ICOM part number for the capacitor is 918-05090.

4. Add a tantalum capacitor 2.2 mf 16V with the positive lead to the base of Q62 and the minus lead to the emitter of Q62. The ICOM part number for the capacitor is 918-01674.

NOTE: Spurious emission will result if the capacitors are installed with incorrect polarity.

5. Check the value of R106 on the main board. It should be 22k.

6. Replace the main board in the radio.

7. Remove the PL board from the radio. Replace the components on the following list.

Original Part	New Value	ICOM Value P/N
C29	.001mf 50V	470pf ceramic 918-01578
C30	.1mf mylar	.022mf mylar 918-01686
R105	220K	47K 915-01183

8. Reassemble the radio.

Source record: 189842
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.antenna

I am not so fortunate to be able to cycle every day, but I have done it
often enough to make these suggestions:

Get a J-Pole antennna. I only operate 2 meters, but there
are dual band versions. Unlike 1/4 wave antennas, a J-Pole does
not depend on any ground plane. Unlike a half-wave, the feed
is at the bottom. Mine is made from 1/4 inch al rod. So I put
a pennant on the top and it looks like a bike flag. I have compared
notes with other cycling hams and all agreed on the J-Pole.

I tried using the head set made by Kenwood for my HT, but it
did not fit well under my helmet. Actually it doesn't fit all
that well on my head without a helmet either, but ...

So I went to one of the earbud mikes. I sewed a piece of velcro to
the straps on the helmet to hold the mike pick up. So I put the helmet
on. Put the ear piece in, press down the velcro, and it is very secure.
Then I thread the wires inside my jersey so it is not flapping around.
My earpiece has a PTT switch which winds up near my waist and can be
locked in the "T" position. There is also a VOX position, but I only
use it when stopped or riding slowly. Besides the obvious problem with
breathing, all other 2 meter ops use PTT so VOX tends to confuse them.

I have tried carrying the HT in the pockets on the back of my jersey, and in
various packs on the bike. I would like to try a handle bar bag because
it might be arranged so you can see the radio while riding. The display
often has something useful, like frequency or low -battery. :-)

Daniel,

I bought one of the first 2 to 6 m transverters they made. I had many problems with the construiction (I bought the kit) due to problems with the silkscreen and the manual, however as I understand it, those problems have been rectified. The transverter works as it should however it seems to cover only aboput 3 mhz with full power.

If you get one, tell me what you think of it.....

Thomas N2YTF
tumino@acsu.buffalo.edu

P.S. I am in no way connected with ten-tec

For what it is worth, I copy 170 shift rtty and packet with the 250 hz filter almost every day, don't notice that much ring, either. Maybe my 706 is unusual, but the blow by is b-a-d. On forty meters you can hear strong broadcast whistles at least six kHz. While this doesn't seem to make even weak signals much more difficult to copy, it sure is annoying and fatiguing to me.

I agree that the DSP or even an audio filter would probably get rid of many, if not the bulk, of the whistles, since they don't seem to be noticeable until you get maybe three kHz away from a strong one. They still pump the agc and cause audio intermod, and no outside box is gonna help that.

Don't read this as bad rapping the IC706--I love mine and wouldn't trade it for a 775. Well, maybe I would, then buy another 706.

You can buy J&M helmet headsets at any HONDA or HARLEY DAVIDSON motorcycle dealer. They have the boom mike model for 3/4 Helmets and the chin piece mike for full coverage helmets. The HONDA and HARLEY microphone impedances are different. You can call J&M and find out which is best for your radio.

Source record: 189855

I am looking for a good basic CW radio by Ten Tec but am not familiar with
the older models like Triton, Delta and others.

An analog read-out would be fine.

I would like 160 meters but not essential.

500 to 1,000 khz filter.

Stable VFO.

Nothing fancy, I do not work contests.

Is there a WEB page or FTP site where radio specs are posted ?

Any advise would be appreciated.

George, KG6GA

Source record: 189857

Daniel,

It is a great unit. I have tried two other transverter kits. The Ten-Tec transverter beats them all. I even pumped full power from my ICOM 735 (100 Watts) into it and it survived! (I won't recommend a repeat of the experiment).

The only problem, I have had, was the heatsink on the driver transistor shorting to the shield of one of the coils. This fried a trace on the board, but it was easy to fix and nothing else seems to have suffered. Of course the shield now has electrical tape around it.

I should note that whoever radioman@hhs.net is, he has nothing to do with myself. As you can see, our email addresses are quite different. I usually post under this name only in alt.radio.pirate (and I have no intention of running 500 watts, I usually run only 50) and I would like to avoid confusion between myself and another person who has decided to call himself Radio Man too. I may have to switch to a new pseudonym in a.r.p if this guy insists on asking for 500 watt amps and such under the name Radio Man.

3413. TS-520 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-26 00:00:00 UTC
From: Davew@cris.com
Message-ID: <57e84g$jao@herald.concentric.net>
Source record: 189861

I smoked the fuse on my TS-520 mistuning it (I didn't read the instructions closely enough). After replacing the fuse, I tuned into a dummy load on several bands and the radio puts out about 100W. When I check the PA plate current at idle (which should be about 60ma). The meter reads correctly, but occasionally twitches upward. Have I damaged the 6146B's or the driver tube? Is this ok?
Thanks

3417. Using a transverter with an HF transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-26 00:00:00 UTC
From: tgold@microvst.demon.co.uk
Message-ID: <848854013asnz@microvst.demon.co.uk>
Source record: 189865
Cross-posted to: rec.radio.amateur.equipment,uk.radio.amatuer

I'm trying to figure out the wiring between a transceiver (an Icom 765) and a VHF transverter, and the Icom manual is amiguous on some points and silent on others.

The manual claims that imposing a (2 to 18v) control voltage on the defined control line will enable the low level output of the transceiver (about 1 mw) but later the manual claims that *removing* that control voltage will enable that same low level output connector as an input, which sounds contradictory. I would have guessed that one preserved the control voltage and simply place the tranceiver into receive. Also the manual is silent on what happens to the main antenna connector, and whether that will still be sensitive to input signals and possibly allow through interference at frequency of the tunable IF (28MHz) of the transverter.

I'm a long way from this gear with only the documentation to go by, so simple experimentation is not possible at this time.

Has anyone done this and is able to clarify how to use the low level connector for BOTH input and output and also whether I need to terminate the HF antenna connector.

And any differences if the transverter supports separate input and output connectors? Does one then use the low level transceiver output for transmit and the regular antenna input for receive?

TIA and Regards,

I do not know if the radio can cover 220 mhz (at least without mods). The power on 144 and 440 will be around 35 watts. The Yaesu clone of the 708 will do the same.As I said in my last message,The Yaesu rep and the Icom employee confirmed these rigs will be available in the spring of 1997 . If you can wait it might be worth it. Also, I do not know if they will ham bands only on receive or "super coverage receive"(200 hz to 500 mhz !!!!)????? only time will tell. 73's steve NS1R

Me and a friend fashioned a bnc panel connection to the plug in that the SRA uses. With it we can use the 2 mtr duck on the scanner side, or you can buy ($5-7) a spare rubber duck to use on the scanner side. Also, it works much better than the original SRA antenna.

<Stan.Aughenbaugh@MCI.COM> writes:

>IT IS NOT ILLEGAL TO POSSESS ONE.
>It is not illegal to even use one if you are licensed and stay within
>your assigned (10m) band(and of course don't splatter etc.
>It is not illegal to buy one, or (if you are a private party) sell one.
>It is not illegal to build one. If you build more and sell them then
>that's illegal because you fall under manufacturing rules then and
>type acceptance.

It's illegal to sell, or offer for sale, any non-type accepted amplifier capable of being used below 144 MHz in the US unless the buyer and seller are both licensed amateurs or dealers of amateur equipment. 97.315 (3)(4) and (5).

Type acceptance specifically forbids operation on ten and 11 meters. 97.317

So:

If you have a PA that operates on ten or eleven meters, and are not an amateur, it is illegal. If you sell one, or offer one for sale, to a non-amateur or if you are a non-amateur or non-amateur dealer it is illegal.

Read the rules before giving the sermon.

:

I have modified a 2 inch speaker from a cellular phone hands free kit,
added a ptt button in one corner that I can push with my thumb. It is
mounted on the left handlebar. The 2m ht fits in a small triangular bag
on the front centre of the handle bars. The antenna is a thin steel 1/4
whip on a rear carrier (sometimes, at others it is just the rubber

ducky). The mic is an electret from a car phone, the cord is fed through a length of brass tubing cut from the 1/8inch dia semi-rigid coax.

The tube was soldered to a small pad of pcb about 1" square. This is the boom mic and it fits to the side of the helmet with a patch of velcro, it comes unstuck if I come unstuck. That mic cord goes down to the ptt on the speaker box and then to the radio. It works nicely, the mic gets very little wind noise, is hands free and the radio is in front where I can see it.

That's not exactly the way that regulation reads, Tom. You have
paraphrased it so as to omit the essential concept that those
restrictions ONLY apply to amplifiers intended to be use in
amateur stations operated under Part 97.

> Type acceptance specifically forbids operation on ten and 11 meters.
> 97.317

I disagree again. Nothing in Part 97 forbids operation of any
equipment on 11m. There are separate CB regulations which do that.
Part 97 only makes it clear that any such operation is not permitted
by any amateur station licensed under Part 97.

> If you have a PA that operates on ten or eleven meters, and are not an
> amateur, it is illegal. If you sell one, or offer one for sale, to a
> non-amateur or if you are a non-amateur or non-amateur dealer it is
> illegal.

I continue to disagree, Tom. Simple possession and buying and
selling are not made illegal by anything in Part 97. Only the
buying, selling, manufacturing, importing and modifying "for use in
a[n] [amateur radio] station" are restricted by those rules.

Yes, I know it's a picky distinction, Tom, but it's important because
it is the difference between what's legal and what's not.

The FT50 has a programming loophole which allows you to scan at 15kHz
(or for that matter, any available tuning step) at any frequency.
Here's how to do it:

1. From VHF VFO mode, enter in a frequency (like 145.000) and set the
desired tuning step (like 15kHz) and offset, if required.

2. Store these values to a memory location (press and hold the orange F
key for a few seconds until a flashing memory location appears in the
sub display. Select a memory location with the knob and press the F key
again to store the values).

3. Enter Memory Recall mode by pressing the MR key. Select the memory
location that you wrote to in step 2. The VHF value should appear in
the display.

4. Enter Memory Tune mode by pressing the MR key (the MT should now show
on the upper left portion of the display).

5. Using the keypad, enter the desired frequency that you wish to begin
scanning from.

6. Without making any other changes, store the edited data into the
current memory location.

You should now have your desired tuning step and UHF frequency stored at
that location. You can confirm the tuning step but don't change it or
else you'll have to repeat the procedure.

Tip: Use a pair of L and U memory locations (lower and upper scanning
boundaries, of which there are 5 pairs) to facilitate easy UHF band
scanning. Using the above example, store the VHF frequency and tuning
step to the L1 (lower boundary) memory location, enter MT mode, change
the frequency and store the edited data back to L1. Then, store (copy)
L1 to the U1 (upper boundary) memory location, enter MT mode, change the
frequency and store the edited data back to U1.

You are now boundary scanning in UHF at 15kHz steps.

Cheers and happy scanning!

Message-ID: <57f8hf$r02@treasure.coastalnet.com>
Source record: 189887

Can anyone give me suggestions for the most secure repeater controller especially from the landline/phone connection.

We are looking to update our repeater and are open to suggestions. We are particularly interested in security measures. We already do not use the upper control codes over the air(someone could decode it from the input frequency). We are looking particularly at the access code security from the landline. A friend told me that there were controllers which use several passwords that are called for by the controller IE-you call the repeater on the phone, when it picks up it gives you 4 tones--meaning that you have to put in the fourth security code.

Does anyone know who makes this?

Thanks,

Mark

As many of you may know, the Rockwell/Collins Amateur Radio Club has secured Art Collins former call sign, W0CXX. This thanks to the efforts of Warren Bruene W5OLY, Rod Blocksome K0DAS, Tom Vinson NY0V, Jay Miller KK5IM and Butch Schartau K0BS and the gracious accommodation of Mary Collins. Certainly, there is no more appropriate permanent home for the callsign of the individual who has impacted amateur radio to the degree Art Collins did. On behalf of the membership and Board of Directors of the Collins Collectors Association, CCA president Bill Wheeler, K0DEW offers our congratulations to the Rockwell/Collins Amateur Radio Club.

Tuesday morning, I spoke with Rod Blocksome, K0DAS out at Collins. Rod said that they will again activate Club Station W0CXX. This time, it will be tonight on the Collins Collectors Association 75 meter net. A special QSL card will be issued. For now, QSL to the callbook address of Tom Vinson, NY0V and be sure to enclose an SASE.

The Tuesday net meets evenings on 3805 at 9:00PM EST and runs through 11:00PM Eastern to accommodate propagation across the country.

CCA President Bill Wheeler, K0DEW further invites all amateurs to join with us and become a part of Collins history.

The Collins Collectors Association is honored to have been chosen to have its affiliated nets be the vehicle by which Art Collins' callsign is reactivated.

-73-

Chuck Rippel, WA4HHG
Secretary, Collins Collectors Association.

>
> 73 Tom
Since you suggested it, I decided to do you a favor and actually cut and
paste part 97.315 I suggest YOU read it and try to get past part (b)
to the part "this requirement does not apply"
E.G. read the whole thing, the 'sermon' comes from
a. having read the whole thing
b. having been in ham radio more than 30 years
c. reading part 97 and others for understanding, not just
trying to prove a point.

I might even suggest reading parts 97.313 and 97.317 once you get past
the big words in 315.

Oh and by the way on your misquote on forbidding 10 *and* 11 meters, I
suggest that you review 97.317 a bit closer.

part 97.315 pasted below for Tom's reference.::

S 97.315 Type acceptance of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of type acceptance. No amplifier capable of operation below 144 MHz
may be constructed or modified by a non-amateur operator without a grant of
type acceptance from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit
(see S 2.815 of the FCC Rules), manufactured, imported or modified for use
in a station or attached at any station must be type accepted for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144
MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily
modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency
decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at
120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been
issued a marketing waiver by the FCC, or the amplifier was purchased before
April 28, 1978, by an amateur operator for use at that amateur operator's
station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

(c) A list of type accepted equipment may be inspected at FCC
headquarters in Washington, DC or at any FCC field location. Any
external
RF power amplifier appearing on this list as type accepted for use in
the
amateur service may be marketed for use in the amateur service.

Tony, you'r right, completely, you said the same things I said, only you
said them much more nicely.
Problem with some of these persons is that they get done reading, before
the FCC was done writing. They never seem to want to read the whole
thing, examine the implications, and look at what is specifically NOT
said.
I just finished pasting 97.315 into a note on this thread to someone
else.
And one astute ham trying to say it was 'against federal law' to
buy or own a 3cx10000. (sigh)
Keep up the good work, there's always a bunch of people out there
trying to impose their will on others even if they have to make (or

misquote) the law to do it. Ha.
73
Stan KF0NC

ah- the heck with it heres's part 97.315 for him also. snip if you need to.
Part 97.315
S 97.315 Type acceptance of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of type acceptance. No amplifier capable of operation below 144 MHz
may be constructed or modified by a non-amateur operator without a grant of
type acceptance from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit
(see S 2.815 of the FCC Rules), manufactured, imported or modified for use
in a station or attached at any station must be type accepted for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144
MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily
modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency
decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at
120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been
issued a marketing waiver by the FCC, or the amplifier was purchased before
April 28, 1978, by an amateur operator for use at that amateur operator's
station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.
(c) A list of type accepted equipment may be inspected at FCC headquarters in Washington, DC or at any FCC field location. Any external
RF power amplifier appearing on this list as type accepted for use in the
amateur service may be marketed for use in the amateur service.

3448. REQ: information for Standard C 5200 ED RTX

Newsgroup: rec.radio.amateur.equipment

HRO used to sell them, abt $50 each. I have one or two packs around here (plus a tr2400 needing an LCD change). You can easily make your own battery packs with nicads. I may have a connector or two hanging around (for sale, naturally). Let me know if you are interested.

Yeasu FL-2000 amplifier for sale. Covers 80-10 meters (11 too).
2 572B tubes, puts out full power, works great. Good condition.
original manual, wired for 110vac (easy change to 220vac).

1200 watts PEP, 1000 watts CW, 600 watts AM.

$100 or best offer - you ship (50+lbs) or CNY pick up.

Please, no junk mail or BS about this being illegal to own.
It is legal for you to own as long as I get $100!!

3455. Which Multi-Mode Controller?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-26 00:00:00 UTC
From: rwd@cei.net
Message-ID: <329b6208.8195507@news.cei.net>
Source record: 189903

I'm interested in replacing my MFJ-1278B Controller.
I operate Packet, Pactor, Baudot RTTY and AMTOR. Occasionally I'll
SWL some Utility Stations or look
for SlowScan and FAX transmissions. The MFJ is not particularly great
on any of these modes and I'd particularly like something that was
more effective on the HF modes in the presence of QRM and at low
signal levels.
Has anyone had experience with a number of the current models of
Multi-mode controllers? Which is best for the type of use I described?
Thanks,
Ray - W9BN

> wirelessly?

An external amplifier for your HT would be a good investment. There are NO units which can be connected wirelessly. Most of them are connected by removing the rubber duckie antenna and connecting to the BNC jack on the HT.

> Can any HT be used for packet radio? Also, can I decode digtal
> transmissions messages and other digital messages with a packet adapter?
> Can I put a packet adapter on a scanner to monitor things?

An HT CAN be used for 1200 baud packett radio. There is software which can be put into your P/C and decodes packett data which is run through the P/C's sound card. This software could also be used on a scanner, tuned to the 2 meter packett station. There was a good article on this software in this issue (Dec.) of QST.

> Are there computer programs that produce (maybe decode?) DTMF and CTCSS
> tones (How can I find frequencies to write one if needed?) I've heard that
> the radio needs direct discrimator output at low error rates. What does
> this mean? Do all new rigs have this?

There are computer programs that decode DTMF and CTCSS tones. See above response and QST article. Direct discrimanator output is NOT necessary for this type of decoding. Direct discrimanator output means capturing the audio from the receiver before it gets to the audio stages. This may be because of audio processes used in some radios to enhance the readability of a voice signal (cut the bass, enhance the highs). New rigs that claim to be "9600 packett ready" have this feature.

George, The Ten-Tec 544 (digital) and 540 (analog) I believe were once called "Triton." No 160 meters, but good rigs. I have brochure.

Delta was later (digital), 160 thru 10 plus gen. coverage. That is Delta II or Model 536. Not sure about WARC bands. Ten-Tec sells used ones when available.

> 73, Jesse, W6KKT

This problem was the subject of Service Bulletin #951. They said that this was due to a faulty ROM socket for IC2. The units with serial numbers 701xxxx to 811xxxx and from 903xxxx to 909xxxx are not likely to have this problem. Units above 909xxxx do not have a socket. The fix is to carefully remove the socket (first unplug the chip) and solder the chip in directly. Since the board has to be soldered on both sides, it is best to clip the pins on the old socket and remove them with heat one at a time. I personally would just put in a high quality socket so that I could have the option of installing the Jack Giehl upgrade ROM if I so desired. Observe antistatic rules when handling the chip.

I need help to locate suppliers for the following components.

11C90 prescaler that divides by 10 (National or Plessey?)
95H90 that divides by 10 (Fairchild decade counter)
MAR6 mmic (0 to 2000 mhz. amp chip) (Mini-Circuits?)

These units are for a addition to my 100 mhz. counter to go to 500 mhz.

Can anyone advise where I might start. All my data books don't include new
take-over companies. Thanks for the time.

I decline to differ. When ever a new product is under developement at
my company I am told to say "thats news to me . I never heard we are
working on a model xxx". If I were to confirm it, then it would help
the competition get geared up with a new model. Also , the head of my
company said that no consumer will want the existing model (icom 706).
they will wait for the ic-708.
I was told first hand at Boxboro convention that Yaesu will have a
Icom 706 clone with 160 thru 440 mhz and 35 watts on the 2 and 440 bands
The same source at Icom who gave me the "OFFICIAL TRANSMIT MODS from
200 hz to 200 MHZ one year ago before anyone on any newsgroup knew about
them, told me of this IC-708. Also I am the person who sent in the
CORRECT mode to open up the transmit from 200hz to 200 mhz on the radio
to "ART SCI" on VOLUME 9A,or 9B. One year ago he had printed the wrong
mode in his manual. I sent him the OFFICIAL MODE FROM ICOM LETTERHEAD
and he published it as well as gave me a free mode book. ASK them!!
How can I be wrong!

Cross-posted to: comp.sys.palmtops,rec.radio.amateur.equipment,rec.models.rc

Sorry for the 'spam', but I really couldn't find an 'appropriate' group
for this ...

Does anyone have details of where I can get hold of Rayovac 'RENEWAL'
rechargeable Alkaline batteries/chargers in the UK ? Or alternatively
mail order from the US, if the shipping is reasonable.
Please send email - I'll post a list of suppliers if there is any
response.

Also, does anyone have experience of using these in a USR/Palm Pilot -
I understand the batteries are good for low current applications, and
not so good for high current - They should be fairly good for the
Pilot ?

Many thanks,
Jack

Daniel,

I built mine last summer and it fired up the first time. That day I worked Colorado and San Fransisco on the 8-10 watt output with just a dipole sitting on top of a hutch in the family room. If you have a rig like an ICOM 735 that can be modified for general coverage transmit it will work the whole 4 MHz. I was told by the Ten-Tec rep that it should be checked for spurious emissions prior to use in the 52 to 54 MHz range.

Hope your experience will be as good as mine.

Some stuff deleted for brevity...

Barry,
A friend of mine used to work for a Tempest team. They routinely swept through military installations looking for noise sources, and eleminating them. Mostly, they were worried that information was leaking out of the base, but would also look for strong signals that caused interference. Occasionally, a civillian would call up the base and ask " hey, what's that signal at _______ Hz?" They would drag out the equipment and start digging.

Perhaps a quick note with "receiving your signal well at 5/6 Hz" and requesting a QSL card confirming reception would help ;^)

Then again, perhaps not.....
Thanks for the info on the filter.

> Thanks in advance
> David Panek
> KE4MLV

The real question is why you don't want to run directly to the
vehicle battery? The system you describe is much more complicated
and subject to failure than using the vehicle battery found in
the car.

The 20 ga wire is not going to be enough for your purpose,
especially if the gel cell is low for any reason. If you use
wire smaller than 14 ga, you should fuse the line at the maximum
carrying capacity of the wire. (My handbook has a void here,
but I think that 4 amps would be safe, although likely to blow
frequently.) The diode can be located anywhere, but the fuse
should be as close to the battery as possible. Best practice
is to fuse both leads, in case of a vehicle ground failure.

My recommendation is:
1. Run 10ga wire to the vehicle battery (best choice) fused
at 25 amps or so. Forget the gel cell.

2. If you use the gel cell, run 14 ga to the vehicle battery,
fused at 15 amps maximum.

A simpler system will almost invariably be more reliable, safer,
and less likely to experience design problems due to unforseen
interactions and Murphy's law. I have considered a second
battery, but only at power much higher than 100 watts.

I have installed HF mobile in three cars, and have never had
a problem running directly to the battery.

Set the standing current (no drive) in each tube to be the
same (adjust bias). Apply drive, and adjust the drive level(s)
to each tube to get the same plate current.

If you are really pedantic, now try halving the drive. If there
is a large difference in plate current, replace the lower reading
tube.

>
> Larry, W3UIO

Hi George, The original Delta model 580 came out about the time WARC
bands were
planned, but not yet legal for hams. It has the 30M crystal and
bandswitch
positions and slots for 17 and 12M crystals. Just added those bands to
the Delta I
got recently for a total of about $35. The Delta seems like a nice
"starter" rig
for CW or SSB ops. I think it could also be used as entry level RTTY
rig. Let me
know if you want to know more.

Message-ID: <01bbdcbd$fdc9a180$46c5f6ce@VisiNet.visi.net>
Source record: 189788

The DX-70 is not a bad radio, but the company's policy is not so good. They just came out with a new DX-70 that had 100 watts on 6meters, BUT, get this, the DX-70 is not upgradable !!!! They used a different pc board and all that have a regular, 1st issue, radio are stuck with it. So, if you bought early, you lost 200.00 because of an almost immediate price slash, and now you are stuck with something you can not sell unless someone wants a low power model that is not upgradeable.

So, looks like Alinco does not support it's customers too well !!

Needless to say, I am no longer an Alinco customer...

I can program then for $20.00 each or $30.00 for both if the programming is identical.

The software / hardware from EGE to program these would run you about $500.00

On the TX-RX unit (X57-4220-11) there are three pots for the different
power settings.
VR14- Middle of Board at rear High Power (100W)
VR15- Left of middle 1/3 way back Low Power (8-12W)
VR16- Left of Middle 1/3 way back Mid Power (45-55W)

Perhaps this could be the break we all are looking for. Is there any chance that the software used in AEA products was only licensed by the authors. If that is the case, maybe the source will be made available to the ham community and they can do their own service.

I personally am very interested in the RL-1 radio link. I bought one of those a couple of years ago and AEA was very unhelpful getting bugs fixed.

3497. Help!TS-940 Freq Display

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-27 00:00:00 UTC
From: w6kkt@frazmtn.com
Message-ID: <329ba0e4.940315@news.frazmtn.com>
Source record: 189795

When I turn on the TS-940 the frequency readout display will not stop scrolling. I have tried resetting the CPU by pressing the A=B button whill turning unit on, but this dosn't stop the readout from scrolling up or down in frequency depending which way I turn the VFO knob. I'm not too bad at fixing rf problems but this digital stuff is something else. I have narrowed the proble to the Digital A board (swapped A board from a friends 940 and radio works fine with his board). The 3v battery is okay. Anyone out there have any idea's or can point me in the right direction? The only help I can get from Kenwood is: "send it in for repair"!. In my opinion, Kenwood seems to not like dealing directly with Hams! Please help me if you can.

Hello to all and thanks for reading this message

I recently acquired some surplus cable TV trunk line. I suspect the cable is 75 ohm but not sure. The cable is 11/16 inch in diameter with black plastic coating over an aluminum jacket there is a white dialectric and a thick center condutor. the numbers written on the wire are T10 J. On the reel there is a Type No T10625JBFV1 and below that the number GN7GN. I would appreciate any help at identifying this wire what it's approxmatly worth and were I would be able to fine connector that would fit it.

Thanks Again
73's Doug VA3DMB

Hi,

A friend of mine (Bill, N4VMY) would like to find a source of the
ceramic plug in coils manufactured by E. F. Johnson prior to WW2. The
ones he wants are wound on ceramic forms, rated at 500 watts and are
mounted on a 5 pin plug bar. He has a complete set of the 150 watt ones
(which he calls the grid coils) and wants the 500 watt ones (plate
coils) to complete an AM transmitter. There is a picture of these in the
10th Radio Handbook on page 650 (in the ad section) but there are no
part #'s listed. If anyone has part #'s for these coils, I would
appreciate those too.

After the war in about 1948, Johnson introduced the air wound coils with
the swinging link deal, so the only pictures in the handbooks of these
ceramic ones should be in the pre 1948 or pre war publications.

Thanks,

Chuck, KE9UW

Hi Rob:

I too had the misfortune to purchase a Radio Link from AEA. I did finally get it working the way it should have from the start. I have always felt that AEA might be guilty of marketing items before they were really ready for market.

In their defense, however, the PK-88 and the PK-232 were superb products.

I have a FT-980 with stock mic, I want to put a desk mic on it. I tried a MD-1 B-8..I liked the sound it had some bass to it but you had to be right on top of it to get it to modulate even with the gain up. I also tried a D 104 with and without the amplifier in line...it was tinney and also picked up my fan with the amp on..does anyone have a suggestion on what would be a (good) desk mic that you don't have to put in your mouth to make it talk with some bass qualities ..Or am I expecting to much!

craigivey@aol.com wrote:
: Is it OK to use a Yaesu FT-51R for CW?

Depends what you mean by "OK".
I assume you mean use the PTT button to send out Morse Code.
In principle this will work but most FM rigs take a short but
significant amount of time to stabilize their carrier frequency.
In CW terminology, this is "chirp". I've tried this on FM
rigs before to get the attention of an SSB/CW operator and
generally have gotten the response of "hey, who's got that
awful CW signal.. the chirp is so bad I can't copy it".

I haven't tried the FT-51R in this manner but my bet
is that it will have the problem. (This is not an issue
for FM transmissions, by the way.)

Maybe the jokes aren't funny. But neither is what lawyers are helping to do to our hobby, our country and our world.

People oftn use humor to release frustration and tension. The cost of doing business with and the results of lawyers causes both. No wonder there are so many lawyer jokes.

Perhaps if lawyers had a canon of ethics which kept them from taking frivolous cases, charging exorbanant rates, raping those who win large judgement sums, and taking or making action that hurt groups like amateur radio they would have a some respect from the general public.

Of course, some lawyer will try and justify or nullify the above. That's what they do.

Date: 1996-11-27 00:00:00 UTC
From: dpanek@msn.com
Message-ID: <00001fed+000042ec@msn.com>
Source record: 189933

I am planning to install a 100 watt HF rig in my vehicle. Here are my plans. Please tell me if what I am going to do is good theory/engineering practice.
I am going to run 20 ga wire from the vehicle battery to (3) 17 amp gell cells in the rear of the vehicle. The 20 ga wire is only to trickle charge the gell cells when not in use.I will put a diode somewhere in here to prevent reverse flow to the vehicle battery. Where do I put the diode and how big of a diode do I need.I am planning on 20amps cuurent draw by the transceiver and I will use 10-12 ga silver teflon wire from the gell cells to the transceiver, a run of 2 feet.
Is my 20 ga wire going to be enough?
Thanks in advance

I have obtained an FT708R that has been xtaled up for freqs other than the 70cm band. I wish to get it back in band (430-440MHz) but have no documentation to do so. The xtal I suspect controls the TX/RX freqs is 46524.5kHz. This give a TX/RX range of 470-480MHz. Can anyone give me a clue as to what freq this rock should be, or does anyone have the relevant info to calculate the rock freq.

thanks

David vk2udt

Bill, I too have wished for a higer voltage battery pack for the 50 or 51 in a small form factor, and I would generally be willing to take a lower capacity to get it. However, my (limited) experience with 3V lithiums is that they are designed for high capacity at a low current rate, and that their terminal voltage collapses to as little as 2V at modest currents. For instance, the 1/2 AA Tadiran sold by RS does this at only 20 mA. OTOH, the 1.5 AA Energizer lithiums do pretty well, so who knows? Let me know how this works if you try it. Thanks,

Don (KE4KYO)

Help - I am repairing a Kenwood TM-621A and the sub band display is not displaying. Its acts like the display is draining off somehow because when you try to change the the memory channels it trys to display a few digits before it fades off into never never land. But I have hit the wall because I have done all I can do without a schematic. If anybody has a schematic or an idea please let me know.

Thank you,
John Crutcher (KC4DUU)

I have an Icom ICW2A HT and have noticed that every once in a while the squelch will not break with an incoming signal. The S-meter deflects and the green LED comes on but no audio. I cycle the power and it seems to recover, or I tap on the top or face of the ht and the audio will come on. I've even turned the squelch control full off and no audio will occur. Has anyone else had this problem?? Any insight would be appreciated.

> a problem running directly to the battery.
>
> Richard Ferguson
> KA0DXM

I agree with Richard's comment. Running directly from the
vehicle battery should be fine. I did it in a 1981 Honda
Civic. The battery was no bigger than today's lawnmower
batteries but seemed to work fine (good old Sears Diehard).
Using CW or SSB mobile, you will seldom draw a full 20 amperes
for more than a second or two. The alternator should be able
to charge the battery without much problem...just make sure you
run the vehicle from time to time during QSO to keep the
battery charged (automotive batteries dont like the deep discharge).
A halogen set of headlamps or foglamps draws nearly 20 amps
these days...and they certainly are added on without much problem.

If worse comes to worse, go with a slightly larger automotive
battery -- it's much less complex than the system you're thinking
of installing.

Of course, if you want to operate without the car running for long
periods of time, the gel-cell option will work...it's just more
complex and prone to vibration/murphy interaction.
Joe

In a hamfest I saw a TH-79E and this radio transmitted 144-146 and 430-440. The difference was when i got to 145.995 , instead of going back to 144.000 the radio kept on going up, receiving but would not transmit (it beeped). I took the CTCSS cover I found the green wire cut. This guy said the ham who sold him the radio did this strange mod just using the keypad (before the keypad mod the radio was transmitting broadband).
I have a Kenwood TH-79E and I would like it to receive only. It is modified and can transmit.
Can you explain this? I never heard about this before.

Robert, here's a writeup I did on my 570. It's been a few weeks
now and I'm still very pleased with the radio.
==========

These are my Impressions of the TS-570 after a day or two at
the controls. My thanks to Joe, W2HPM who also spent some
time with me reviewing this new Kenwood.

I'm comparing the radio based on others I have owned:
940, 765, 850, Omni6, 450, 50, Delta2, and a 706. I've also
operated the FT-1000 enough to compare it to the others.

The radio was setup by removing all the connectors from the
450 and simply plugging them into the 570. Only the CW jack
changed from a "phone jack to an 1/8" mini which was
quickly fixed with an adapter. The amplifier keying and
PK232 interface all worked exactly as they did on the 450.

The LCD display reminds me most of the IC-728. The numbers
are large and easy to read. The backlight is adjustable via
a menu selection. The meter is a nice compromise between an
analog movement and a bargraph, since the LCD segments are
laid out in a radius, resembling an analog movement. This
is a simultaneous
S meter, power level, SWR, Compression level and ALC. It
looks like the audio level function in the 450 was left out
of the 570 meter. The peak hold function works well. (2
segments remain at the peak level for about .5 secs.)

The front panel is well laid out. It's exactly the same
size as the 450 but MUCH easier to operate. The location of
each of the buttons has been well thought out for operator
convenience or efficient contest operation. The buttons are
rounded rubber, not the squared off plastic and metal ones
on the 450 and 850 and 940. The buttons are divided into

groups depending on function. Each one of these groups has a different shape and feel - a nice touch for the sightless or sleepy contest operator who has his eyes on the monitor and only his left hand on the controls. The buttons work easily and don't take much effort. This was annoying to me on the 706, Delta2 and Omni6 which take entirely too much pressure to make contact. This is an important point for contestors.

Joe pointed out that a "reminder" LED was missing from functions like notch (beat canceler and noise blanker) although the LCD segments for these functions are of good size and difficult to miss.

The receiver was compared side by side to my 450. Without doing extensive lab tests with a signal generator, it's seems that the receiver is somewhat more sensitive yet quieter from phase noise. I didn't seem to need the pre-amp in situations where I needed it with the 450. The Noise Blanker seemed effective to pulsing noise and compared to the 450, did not cause the usual distortion on strong signals or strong adjacent signals.

IF shift control works well and I'm please to see it with a center detent, like the 450. I tend to leave mine a few degrees off center which seems to emphasize the lows of a SSB signal, making the signal sound "full".

The memory channel selector knob doubles as a menu selection control. The following functions are not controlled by the menus but can be individually controlled with this "multi" knob: mic gain, pwr level, keyer speed, vox/break-in delay, and bandwidth selector.

The menu function is extensive, yet fairly easy to use. It is similar to the 450 and 850 but has an alpha numeric scrolling display describing the function so you don't need to constantly refer to the manual. We were able to set and control most of the menu driven functions for the first time without referring to the manual.

The DSP function is in both the transmit and receive audio circuits, not in the IF like some of the other radios currently on the market. There are advantages and disadvantages to both techniques and Kenwood has chosen to put it in the AF. I think this was good choice, although I haven't compared it to an IF DSP radio. The complaints I've heard about transmit and receive audio distortion in the 870, appear to be non existent in the 570. Both transmit and receive audio are clean and non-distorted. Even with the DSP beat canceler or DSP Noise Reducer functions on, receive audio is still clean, although it is possible to

hear a hint that the audio is being "processed". There is no comparison though to the distortion introduced in the audio through the low end Radio Shack DSP unit. There are two NR selections. NR1 and NR2. One is used normally for SSB and the other for CW. These tend to reduce background "hiss" and is a separate function from the Beat Cancel which works well on SSB. Kenwood could have had the NR1 and NR2 functions automatically selected depending on mode selected, SSB or CW. I don't know why they didn't do this. I'm mostly a CW operator and the NR2 works well but may not be that pleasing to listen to while copying CW at over 40 WPM. There is just a hint of rising edge distortion as the DSP does it's work. What is impressive however, is the "hiss" reduction with the NR function enabled. The receiver is almost completely quiet except for the desired signal. It would be interesting to compare this DSP with one of the high end external DSP units. The Beat canceler does a fine job of eliminating heterodynes on SSB and does not add any objectionable distortion to the received audio.

The CW tuning is cute, but I'm not sure how often I'd use it. Perhaps new operators or contestors would find more use for it than I would. I suppose my ear has enough training and experience where I don't see that it's necessary. It is not as precise as I thought it would be as it usually comes within 10 or 20 Hz of the correct frequency depending on signal strength, QRM or keying speed.

I installed the 8Mhz, 500Hz CW filter in my radio. It appears that there is only one spot for this additional filter - I would not be able to install a 1.8Khz filter with my CW filter installed. I don't see this as a problem since a combination of the DSP slope tuning and the IF shift does an adequate job.

On CW, the IF filtering works well. There is a filter bandwidth control that controls the DSP AF bandwidth. The DSP bandwidth is variable from 2.0Khz to 1.0Khz, 600 Hz, 400, 300, 200,100 and 50 Hz! The resulting combination of 500 Hz IF filter and DSP AF filtering reminds me of the Jones Filter arrangement that Ten-Tec put in their Delta2 transceiver which was continuously variable from wide down to less than 100 Hz. I found it difficult to find a crowded portion of the band where the 570's IF and DSP AF filtering could not effectively knock out adjacent interference. Compared to my 450 which had both 8Mhz and 455Khz, 500Hz CW filters, the 570 seemed to be cleaner with less "ringing" while copying CW at narrow filter settings.

The automatic antenna tuner seems to do a good job of matching the radio on any band to my 80 meter dipole fed

with ladder line through a 4:1 balun, although the 450 never had a problem either. The "AT Tune" function is different than on the 850 and 450. Kenwood saved the "Auto/Thru" button and put both functions on one button. Depressing the "AT Tune" button toggles the tuner on or off. Holding it down for longer than a second, starts the tuning cycle. The tuner sounds much different than previous Kenwoods. Rather than hearing the whirring of a motor, it sounds more like a relay chattering. It took some getting used to. I'm curious what they did different with the tuner that makes it sound like this. The tuner, like previous radios, memorizes settings for each band.

On Pactor, Amtor and RTTY, the radio performed well. The variable bandwidth of the DSP filter is a nice feature when operating on the digital modes to knock out any adjacent frequency QRM. On transmit, I was able to operate at 100 Watts key down on long FEC and Baudot transmissions with no temperature excessive rise. The radio seems to handle this 100% duty cycle operation. A nice feature for the digital modes are menu selections to vary BOTH the audio input and output from and to the TNC.

On CW, the 570, in my opinion, is the best Kenwood yet that I've operated. My criteria for CW operation is mainly how smooth the transmit to receive transition is, how smooth the sidetone sounds and any audible noise or clicks from either the speaker or relays while on QSK or semi-QSK. The amplifier keying relay is easily enabled or disabled via a menu selection and with this relay disabled, the radio is very smooth and quiet in QSK. During QSK, you have to strain to hear a small, perhaps reed relay. I heard very little, to no difference in another receiver while switching between semi-QSK and full break in while sending a string of dits at 50+ WPM. This is a test that Joe and I usually run to see how good the QSK operation is and essentially duplicates the CW dual trace scope photo you see in the QST rig reviews. On QSK, I would rate the 570 second only to the Ten-Tec Omni 6 for silky smooth QSK operation and nice sounding CW on receive.

Although the AF output stages are spec'd at 1.5 Watts for the 450 and 570, the 570 seemed to have somewhat less audio drive into my external speaker than the 450. It's not a problem since I never seem to run the audio gain up less than 10 or 11 o'clock . The audio quality on SSB and AM was clean and comparable to the 450.

We ran a number of transmit audio tests on 75 meter LSB. Using a Radio Shack Highball mic, the consensus was that "High Boost" transmit audio equalization, and the mic gain

at 40, seemed to work best. A half dozen critical ears on the frequency preferred the 570 over the 450 for transmit audio quality.

I'd be interested to hear from other 570 users and will try to answer question from others who may be interested.

3535. Midland hand-held desk charger

Hi
I have a midland hand-held, model 70-143b, that i am looking for a desktop battery charger for. The battery is a 9.6v 600mah, JB7OB16 (JaBRO). It has 2 button contacts on one side and one on the other. The battery is rotated 1/4 turn to remove it from the radio.

Also,

Does anyone know what the freq range of this radio is? It is currently at 154mz.

thanks...

Hello Tim
I have bought a NIR-12 instead of the 1.8 kc filter. I have tried it first but no more performance I got. I have installed a 250 hz filter for CW only and the problem is you can't install two filter simultaneous.
I use the NIR-12 for all modes (ssstv, packtor, voice) and especialy for noice and ignition reduction.

...To Carry this one 'step' further, before memorizing the 145.00MHz frequency,
set the repeater offset to 45.00 and repeater shift to -RPT. That way,
if you want to modify the memory for cellular use, then the offset will be
45.00MHz. This may come in handy when scanning the Cell tower freqs and then
using the RV (reverse) function to check the input frequency. (listening
for the handset).
So, you will have Cell scan capability with 15kHz steps, and 45MHz(-) offset.

3540. Offers for FT101EE nonworking HF Xcvr

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-27 00:00:00 UTC
From: gbohner@aol.com
Message-ID: <19961127155601.KAA28862@ladder01.news.aol.com>
Source record: 189956

I have a Yaesu FT101EE HF Xcvr with matching speaker. It got hit by lightening, but it was turned off and the antenna was NOT connected. The AC connector is charred. Otherwise, no sign of damage inside. It will not turn on when AC is applied. I have the DC cord, but have not tried it on DC. I got a new xcvr and this has been sitting in the closet for over a year now. Manual, with schematic and original boxes included.

No reasonable offer refused -- you pay shipping.

I had the same problem with my TS-950. Turns out that the knob was not
perfectly balanced and would rotate one way or the other depending on
position. You can tighten this knob by grabbing the inner knurl and
turning the outer knob. Check your Owners Manual.

Pretty dumb thread. Amps capable of operation in the CB band are illegal =
to sell.
If one does possess one, it's only de facto evidence of illegal =
operation in the
prescence of CB gear or the abscence of a license for a legitamate radio =
service
within the amplifier's capable range.

Amateurs may modify or construct up to one such unit each year. =
Experimental,
broadcast and other services may request and receive a waiver of the =
rules after
submitting need for such a unit.

3559. FT-50R CTCSS Question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-27 00:00:00 UTC
From: Phil Mikalofsky <miksky@mail.execpc.com>
Message-ID: <329CC3CE.6179@mail.execpc.com>
Source record: 189975

FT-50R Owners: Does the FT-50R CTCSS encoder/transmitter have the 'squelch tail elimination or reverse burst' feature that most commercial rigs have?

If you are not familiar with this feature, the CTCSS encoder shuts off and/or reverses its phase just prior to the tranmitter unkeying. This eliminates a noise burst/squelch tail in the receiver that has its CTCSS decoder enabled.

Thanks,
Phil Mikalofsky, WB9TAE

From: hershman <hershman@ix.netcom.com>
Message-ID: <329CA9FB.7014@ix.netcom.com>
Source record: 189977

I have recieved several responses to my info on the Icom 708 and the Yaesu copycat which should be out in spring 1997. First, I had a strong denial from an Icom employee.(He wants to keep Icom 706 Sales going strong). If you guys knew the 708 was coming you would wait for it or the similar Yaesu model. Last year when I got official "ICOM LETTERHEAD" with the 706 transmit recieve mods from 200 hz continuous to 200 mhz. I called Icom USA to confirm them. They BLATENTLY DENIED the existence of such mods and said the 706 was "UNMODIFIABle". Thousands of people did these mods as posted in ART SCI MOD BOOK by me "NS1R" and the mods work!!THey should, there from ICOM!!! Icom did agreat job with the 706 and I bet you guys will be even more impressed by the 708 available in spring 1997!!!!

I just inherited a Standard AX700E tuner from my late father. Unfortunately
I don't know where to begin programming it. I would like to listen to the
railroad frequencies from 160.110 Mhz to 161.110 Mhz range. Is it possible
to program this unit to do this??

3565. RE: ICOM U-16 Programming Help

Thanks Rod! I stopped by to visit the "Virtual Collins Radio Museum" and was really impressed with it. Someone put a lot of work into the museum! It would be great to see other equipment lines documented as well. For instance, Kenwood. Wouldn't it be neat to see an add for a TS-180 for sale used and be able to go get a picture and technical specs for it?

The current code is FUNC 159357. If that does not work, then you have
to remove the jumper that disables the program mode. It's two or three
boards into the radio. It's been a few years sence I last did it myself.
If the jumper is NOT there, then you have one of the odd models and have
to clone the radio with a ICOM OPC-129 cloning cable or send it back to
ICOM for programming. Hope this helps.

Hi all,
well its been a while since ive even bothered hooking up my radio ,so
much so that last time I did so I wasnt even in possesion of a
computer..
but anyway,now with a new home qth which is worth while dxing out of
I
need some details on how to connect my kenwood ts450 sat up to the
comuter
what software do I need? what hardware do I need ?
is it possable to get the software off the net somewhere ?
surely someone out there does something similar with their kenwood .
any ideas on how to go about the above process would be greatly
received

3573. TS-440S Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-28 00:00:00 UTC
From: Wink <wink@rpa.net>
Message-ID: <329DBB32.540E@rpa.net>
Source record: 189739

I have a TS-440S that has given me nine years of good service. I had a problem back in 91 that involved the CPU being in a chip socket instead of soldered to the board. I sent it to Kenwood and they fixed it.

Now I'm having a new problem which is internmitent. It receives a signal just fine but suddenly it drifts off frequency with an ascending tone. The display does not change. If a signal is heard, you must rapidly track it up and down about 10 KHz and it sounds watery. If I try to transmit when this is happening, there is no or very little output power. Sometimes it will return to normal operation by itself and sometimes I have to shut it off for a minute or so to get it to work again.

Any help would be appreciated!

Gary, KB2NU wink@rpa.net

>Please respond to joel.weiner@ualberta.ca
>73 Joel VE6WQ

I've had the same problem with a PK-88 connected to the packet jack of an IC820 which does not mute the audio with the squelch. My PK-96 works correctly in that it does not light DCD unless there is a valid data signal, however the PK-88 lights DCD in the presence of "noise".

This was not a big problem for me since I normally use the PK-96 on this radio, however the simple solution to make it work with the PK-88 is to use a cable from the speaker output to the audio in jack on the PK-88. This provides audio to the PK-88 only when the squelch opens.

>---psiborg

Serial number 8401on the H16 and 8501 on the U 6 and above had the new logic board which has the jumper. Earlier versions had a diode that stands straight up on the circuit board which you need to cut. When you do the function 159357 you should see

ch:1 or any channel number. The keys the : colon appearing between the CH and channel number. If it does not then the jumper must be removed. The same programming worked for all H / U 16 radios since they were introduced. If there are some channels you can not recover then the radio must be cloned from a good working radio. You can only clone H 16 to H 16 and U 16 to U 16.

This is probably due to the goo that they used to mechanically stabilize
the parts in the pll board. The goo (synthetic rubber) is located in a
metal compartment containing VCO#5 on the PLL board. Knwd advises
replacing Q34,Q35,D14, but no one I know did that, they just scraped the
rubber out around the parts and the 440 was fixed. One friend just put a
heating pad under the whole radio and it works fine that way. He is a
Chemist and reasoned that the problem is conductivity caused by
absorbing moisture from the air......I guess he's right!
This is all reported in Kenwood Service Bulletin #973.

As soon as the snow disappearts from the scenery here in Montreal, I
bike a lot and of course I like having my Icom IC-W31 with me at all
times.

When on my bike, I also carry a small good quality backpack which has
a good stable harnest system (with waist belt). So, the radio goes in
the utility pocket on the backpack, rubber duck antenna sticking out
the top.

For speaker and mic arrangement, I use the large HM-54 speaker-mike
which I clip on my pack's left shoulder strap. It's stable, loud and
I reach all the repeaters I want to use.

I have nothing mounted on my bike as it is a mountain bike and it gets
a really rough ride (I like to offroad a lot!)

Hi,

I am looking for a Pearce Simpson Model A18 (Super Panther) CB radio.
This or any SSB CB using the Cybernet Circuit Board will suffice. This
will be used as an experiment in conversion to 6 meters, so I don't want to
get too heavy into it. If you have one of these in working condition, or
working/needing finals, I would be interested in neogatiating a sale/trade.
Looking for units having a digital display (preferred) but would be
interested in discussing others; as long as they are based on the Cybernet
board and have SSB.

Thanks,

AEA will likely not be doing this. The owner of AEA still owns the soruce code. He also still has the option of selling the product lines to other entitys. So long as that is still possiable to sell the product line it would kill a sales possibility by handing out the source code.

I know if I were looking at purchase of a product line and the source code needed for the product was freely available, then would not be a viable line to purchase as any one could assemble clones of the product in his garage.

Might be a good time for a winter project of learning assembler of the processor used. Analyise the circuit function and rewrite the code to suit your radio. Could make for a good club project.

From: Bill Wyatt <bwyatt@mesnet.mesonet.ou.edu>
Message-ID: <329DCDAE.51F5@mesnet.mesonet.ou.edu>
Source record: 189757

Good day to all.

I'm in the process of restoring a very clean Johnson Invader 2000 transmitter. This radio is very very nice and so far has not taken much in the way of restoring.

However, I have not powered up the amp or the amp power supply. The exciter came up and worked with only some minor adjustments. i. e. freq, adjusting the exciter gears and replace about half the tubes. I can only hope the amp. will come to life with as little trouble.

My question, to those that have or do use this transmitter is:

1. Any thing I need to be on the allert for before I power up the amp. high voltage section.

2. Any sprecial tune up procedures, (the exciter came up to 125 watts or show with no problems at all.

3. I will be running the trans. on 120 v. ac. I have a good power source which can supply 20 amps. The book recommends 220 but, I would rather use 120 if it doesn't cause any problems.

4. What do you recoment for an ant. switch? I know the old knife switch is the most positive however, I would like to use some kind of relay setup. I will eventually use trans. and rec. antennas but for now I must use the same ant.

5. Any other things to look for or things not to do or things to do before putting my new toy on the air.

Thanks for your time and help.

Hi Doug VA3DMB

Bill N5WO on this end

I'm fairly sure what you have is 75 ohm cable TV coax. It is used to make the main cable runs fo a CATV system and works very nicely on the VHF and lower ham bands. In fact the stuff you have with the plastic jacket is the best.

We have used the stuff for years on VHF repeaters both rec. and trans. If you want to get technical there is a mis-match 50 ohm as compaired to 75 ohm but, it generaly won't cause any great problems below UHF. And, I might even use it at UHF freq. if the run was fairly short, say less than 150 ft., and the other choice was one of the RG-8's out there. If you were choosing between say Belden 9913 or LMR-400 I would choose the last.

As for the connectors there are commercial ones out there but, they are not for the faint at heart. The will cost you big bucks. Likely over 25.00 per connector. We have used, with good luck, a standard PL-259 connector on this cable with pretty good luck. Just remove enough of the jacket to expose the center cunductor to a length that will go out the end of the PL-259, you can solder the center conductor it should be copper or atlest copper clad. Now the shield is a little tricky. You need to remove the dielectric between the alum. shield and the center conductor. Clean it out for about 1/2 inch or 5/8's at most. Now remove the black plastic cover, about 1 inch should be fine. Take a hack saw and make several cuts in the alum. shield so it can be clamped down on the end of the PL-259. The cuts are to be made with the parallel to the cable longwise. Now come the tough part. You need to install the PL-259 (complete) on the cable so the center conductor

extends out the end of the connector and so the shield comes up on the shoulder of the other end of the connector. However, be carfull not to bind up the workings of the threaded sleeve on the connector. Take a hose clamp, on of the screw clamp types, and cause the alum. shield to compress down on the sholder of the connector. Anyway it all works and it's a cheap way to make a connector for this stuff. This type of connector workes beter on the 1/2 inch verson of the same cable.

Well, this is possibly much more than you wanted to know if so throw the un-used part in the bit-bucket.....hi hi.

Check with you CATV venndor in the area, best to find the guys that take care of the lines they should be able to help you with this cable. As for what it's worth, sorry to say possibly not much if it has found its way to the surpluse market. However, if you need to put up a VHF repeater and need some hard line you may have a small gold mine.

Hope this helps

Bill Wyatt N5WO
Woodward, Oklahoma USA

BTW be nice to the cable guys they might just give you a couple of ends for your cable.....never hurts to ask.

The only mod that I am aware of for the IC-27A is one that allows you to
transmit on the " A " VFO and receive on the " B " VFO. There is no
modification to open the transmitter.

Does this speaker give you adequate noise? My Kenwood TH-77 has little audio output (it's OK when stationary, but not when moving).

>The 2m ht fits in a small triangular bag
>on the front centre of the handle bars. The antenna is a thin steel 1/4

Are these front handlebar backs easily obtainable? They sound useful for all sorts of things.

>The tube was soldered to a small pad of pcb about 1" square. This is the

Cunning plan (do we pin a tale on it and call it a weasle?). I will have a look at this in closely (attaching the mic to the helmet was not something I had thought of).

Dave.

I'm posting this message for a friend, N4OVP, Dave Kaiser....

One Kenwood TL-922 amp for sale, uses two 3-500Z's to develop full legal limit. This is not the chinsey U.S. model, rather it was brought back to the U.S. by someone in the military straight from Japan. Because of this, it has 10 meters installed at the factory, and appears to be somewhat heavier built than the TL-922A which is imported into the U.S. No more than 6 hours on new tubes, he moved into a "city neighborhood", and can't use it because of TVI to his neighbors. Covers 160 through 10 (no WARC band switch taps...). Looks nice inside and out, has been stored in a closet the last couple of years. First offer over $1200. E-mail to Web, kr4wm@sccoast.net for more details....

Source record: 189816

One BTI LK-2000 amp for sale, uses single 3-1000Z or 4-1000A (your choice, will work with either...) 3-1000Z inside, spare 4-1000A tube. This is a floor console amp, looks nice, and works great. Just back from being serviced by Omega Amplifiers in Knightdale, NC. Has Richard Measures parasitic mod to protect the amp from parasitics. BNC connector on input, SO-239 output. Has not been on the air since getting back. Also has soft fleece-lined cover, original owners manual, and a "teaser" advertisement sheet from when it was new. Pick-up only, from my QTH in Myrtle Beach, SC, unless you are willing to assume responsibility for having a professional packing company pick it up and pack it properly. Best offer over $1000.00 takes this PRIZE amp! I now use an amp that has two 3-500Z's so have no need for it...E-mail for more info to Web, kr4wm@sccoast.net

Cosmetically BEAUTIFUL Collins 32S-3 transmitter, 75S-3 receiver, 516F-2 power supply/speaker, SM-2 desk mike, and as-new DL-1 dummy load. Works OK from 40 through 10 meters, but transmitter blows fuses on 75 during loading. I bought it while going through a second childhood a few months back for $650. Offers? (Will not sell for less than I paid for it....) kr4wm@sccoast.net

Many radios are type accepted for marine and other use at the same time. The SGC-2000 is one example for marine HF-SSB, avaition and amateur. Motorola M200 series was type accepted for business and marine and could also cover 2M ham. My question to the original post is do you need one that can TRANSMIT on avaition (AM mode)in addition to marine, etc? There are some but there kinda expensive! 73, Mike.

Source record: 189825

I recently bought an old Heathkit Cheyenne tube transmitter for hams, and I plan on restoring it. It's missing the mobile power supply, however. I need a power supply that runs off 12 volts input and puts out 300 volts at 50 milliamps AND 600 volts at 110 milliamps for the 6146 final amp tube. Must have a 6 pin Jones plug for output, and probably should have pos/neg alligator clips so it can be hooked directly to a car battery. Mail moo@midtown.net.

>
Keith

I have a 242, the new mobile rig and am quite impressed with it. A fellow ham in the club here in Savannah had a 212 and traded it in for a new 242. According to him, the 242 has better adjacent channel rejection specs than the 212, thus less interference from intermod if you're in a hostile radio evironment. With the 242, you get 10 more memory channels; from 30 to 40. Additionally, with the 212, you could not put an expanded recieve freq (i.e. National Weather Service) into memory, you had to keep in one of the VFO's.

3629. Known problems with IC-900-A?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-29 00:00:00 UTC
From: Desmond Crisis <dcrisis@cnet.com>
Message-ID: <329F07DE.E7C@cnet.com>
Source record: 189578

Thanks for reading this.

I just picked up an ICOM 900-A multi-band stacking mobile and I've heard that they had a high return rate when they first came out. Mine is getting a little flaky in the car. I'm using the fiber optic cable to connect the main unit in the trunk to the interface under the passenger seat. It's jumping channels occasionally and I'm told that the audio cuts out a little.

What I want to know is what were the reported problems and related solutions. I'd really like to NOT send this to Icom service because I'd like to use the unit before my retirement (in 40 years).

Any input you have will help me troubleshoot this thing. (I'm also wobbling on the temptation of getting more band modules.)

Thanks,

Desmond Crisis

The problem was in which circuit I had connected interface A. It wasn't
delivering anough power to the unit and was sensitive to any
fluctuations. I solved it by re-routing the power connection. Thanks
for the input, I feel a lot better about the radio now.

As far as Icom, I use to preach 'church of Icom' and was proud to tell
people about my great Icom radio and all that, but I've got to say that
I have felt particularly disappointed in them lately, especially in

their responsiveness to customers. Did they downsize their customer service staff? Every call I've launched has exhausted my patience with their phone system spending 60 min.s telling me that I'll have 3 min.s to talk to someone. What a joke. My repair experiences were also poor. lengthy stays in the Icom hospital just to get the radio back with a bill and it's problem uncorrected.

I don't know about Yaesu service, because I haven't broken it yet.

One more question about the 900 to pester you guys with... I want to tune the radio in 12.5 KHz steps. (I listen to media repeaters for traffic reports and they only use the splinters) Do any of you know how this is done?

Desmond

Message-ID: <022bfb2d$8564f420$7b2a0ccb@greg-kernaghan>
Source record: 189638

I own an ANC-4 and reckon it's great. I've really souped its performance up by using a longwire antenna through a MIZUHO AT-2000 antenna tuner AS THE NOISE PROBE. This has given me the ability to tune into the specific interference with amazing accurcy and then eliminate it. This method has even allowed me to reduce skywave interference. My primary recieve dipole is still doing it's thing, but my reciever is breathing much easier.

Incidentally, I also own a JPS NIR-12 DSP noise and interference reducer and, I must admit, it does things the ANC-4 could never do. However, the ANC-4 does what it does, very well indeed. If it's a question of which one to buy... go for the NIR-12 if you can, 'cause it provides results that simulate the performance of the ANC-4, plus adding a few rippers of it's own.

Hello Al,

I guess you were asking about performance of the radio:

I've been using my Alinco DX70 for about 1 1/2 years now. I bought one
of the first models for-sale when I was living in Tokyo. Performance
remains excellent -- no real complaints. As a comparison, I purchased
the Icom IC-706. While the 706 also covers 2 meters, and 100 watts on
six meters, the DX70 works much better on HF (especially HF CW and
SSB...
I dont work digital modes).

It lacks a VSWR meter and an internal CW keyer, otherwise a fine rig.
73,
Joe

3644. Touch lamp noise

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-29 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <57mrnb$trr@camel4.mindspring.com>
Source record: 189640

My XYL bought a pair of touch lamps last week, and they generate an S8 noise level, even when they are turned off. They turn off and on when I transmit.

Has anyone had any luck eliminating these problems.

Thanks for any help.

David, KA4IKH

Hello and tnx for reading my message. Does anyone have any experience using the Timewave 599ZX RTTY Remodulator feature? Does it work well, is it worthht the time to fabricate cables for this? I am using the AEA DSP2232 as a TNC and wonder if I would notice a difference at all. Thank you!

I have an opportunity to buy an ICOM 2GAT with a couple of
extras (speaker/mic, high-cap battery and charger). Can anyone tell me about
this rig? ICOM apaprently doesn't make it any more. Is it an older version
of the IC-2GXA[T]? The owner claims it has a range of 130-170mhz, is this a
known (and safe) mod?

Opinions/reviews/etc would be greatly appreciated. This will be my first
HT if I buy it. E-mail responses preferred, but I also read this newsgroup.

I had the receive function fail on this shortly after begining to
use it...I should also point out that although R/S says the Receive
Pre-amp makes up for insertion losses...it does not. R/S now wants
$4.50 for the Service Manual, plus $3 shipping. (I see no point to
giving it back to them for repair).

I have used CB antennas for 10M for years.. the base loaded type while are a bit narrow-banded work fine and
the 102" whip after some trimming works GREAT on 10. On some of the loaded type antennas, minor mods to the
coil can result in a good 6M 1/4 wave and I have seen some modded to operate at 5/8 2M.

I wouldn't try and get one to work below 24Mhz though..

Jim..

It's an excellent rig. It's easier to use and more versatile than its
predecessor, the IC-02AT, and it takes the same batteries and accessories.
I think it takes less current on receive than the 02AT.

The out-of-band mod consists of soldering-in one diode; very easy.

>anyone have any comments about these units?
>-Bob
>WA2WLH

The Vertex UHF is still pretty rare. Our city RACES group in Orange County has one that we installed three weeks ago. It has a very hot receiver. So far we are very happy with it. The only negative so far has been that the designers made a small mistake with the output PL level. A small mod must be made to the board in order to vary the output PL more than a very tiny amount. The VHF version of this repeater does not share this problem. And the mod is very simple, but disables the digital schelch (not typically used by HAMS).

3665. FT-51 PROBLEM / QUESTION - HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-11-29 00:00:00 UTC
From: XSQM50A@prodigy.com
Message-ID: <57npp7$tis@usenetp1.news.prodigy.com>
Source record: 189661

I have a problem with my FT-51 that I cannot currently figure out --

A couple of nights ago, I left my FT-51 scanning on battery, and I fell asleep. When I woke up, the battery was dead (obviously), and when I hooked it up to some power, I had lost all of my memories. (The CPU seemed to have reset)

When I tried to enter some of my repeaters again, I noticed that the Tx range of my HT had actually been reduced to 144-146 MHz, and 430-440MHz. I have tried resetting the CPU a few times, and I have tried various features on and off (such as extended Rx), but nothing seems to work.

Can anyone out here please help me???

I would appreciate it!

Your potential buyers might be interested my FT101 also got hit by lightning
induced side currents and I could fix it just by replacing an input RF transistor
(antenna was connected) AND switching wires around in this big power plug.
One of the input 220v AC wires had 0 ohms to ground: this was the neutral side,
and the set just turned itself on (with switch off) with just lots of QRM from
the speaker... Made this wire the ground one, and 9X5PT was back on the air...
But this strike was on an eucalyptus tree 100 feet away, not on the quad or
the tower, so I guess I was lucky.

> use 120 if it doesn't cause any problems.

You're a lot better off using 220 for the HV. Although it makes the
Invader 2000
less than original, you should add a 3-wire 110 plug to the exciter, and
use 220 for the HV. Put a GFCI in the 110 line you use for safety's
sake --
the Invader 2000 was built before they'd invented 3-line 110V power in
the home.

Unless you're a totally die-hard fire-bottle enthusiast, you need to use
solid-state replacements for the HV mercury rectifiers. If you keep the
mercury rectifiers (yes, they ARE beautiful with the lights turned out),
you
need to put the HV supply on a variac and bring the voltage up slowly,
to
re-form the rectifiers. If you don't, you will find out how much a
plate
transformer costs. The pre-1960 ARRL handbooks and some old tube
manuals
discuss how to use new mercury rectifiers. Follow that procedure.

Oh, and check out rec.radio.amateur.boatanchors. They got a whole
newsgroup for people like you!

Cliff,

Thanks again for the info. I looked inside the radio, and found a suitcase jumper located just behind the keyboard/CPU board. Removing the suitcase jumper and placing it on only one pin, the programming capability was restored. I'm back in business.

What kind of antenna is it?
I have used a K40 mag mount on 10 meters and it works GREAT!! - just
shorten the whip 'till you get a good match and it should be fine.

Hello! I have a VHF model GE Master II that I am currently using for 1200 baud packet. I am interested in using it with my KPC-9612, and using both the 1200 and 9600 on the same radio. Does someone have a mod to make it so that the 9600 will work on the same radio as the 1200? Or does someone at least have a mod that will make the 9600 work? Right now it is not deviating good enough, although it seems to receive ok.

Please CC any replies to my email address, kb0kqa@computerpro.com

Thanks and 73 - Matt

Hi.
Excuse me for this unsolicited e-mail. I felt this was the
best way to inform you of our new service.

Here at PERSONALSEEK, www.personalseek.com, we've decided to build
another free international search engine,but this one is only for
commercial organizations. It is called BUSINESSEEK and it's absolutely
free. Try it for yourself at http://www.businesseek.com/

The goal of Businesseek is to allow the user to find a company, brand or
product quickly and easily. We will provide your company with a password
so you can update your data instantly and at any time that is convenient
for you.

We suggest you first use your native language .You can then submit the
same information in other languages depending on the markets that you
would like to serve. There are no limits regarding the number of
submissions. The information intake form will be available in english
spanish,italian, french and german.

We also have a COMPANY NEWS OF BUSINESSEEK section, where you will be
able to put up to 1000 text characters text giving news about your
company.You can describe new products or brands, new researches, etc.,
using the password we'll give you after you add your data.

To add your data, go to add in
http://www.businesseek.com/
After you have your password, you can acces our news service at
http://www.businesseek.com/business/news

Yours sincerely.

Equiupment for-sale should be posted to rec.radio.swap
(specifically chartered for the buying, selling, and
trading of Ham Gear) and rec.radio.amateur.boatanchors
for gear 15 years and older as well as all tube-type
power amps. However, if you look at the postings in
rec.radio.amateur.equipment, you will see that there
are a lot of for-sale type listings so apparently no one
gets too awfully upset. Just my 2 cents....

I have the IC-2GA, a version sold in the far-east that I bought in
Singapore some years ago.
I am very satisfied with it. Is is built very rugged, easy to operate,
simple controls and so on.
The radio is also used by many professional services around the world I
have noticed, probably due to its rugged design and its extended range 130
- 173 MHz
I also like the case design much more than today's HTs, modern HTs look
like silly toys.

My advice: Buy it.

I wonder if the family isn't in cahoots on this - Grandparents file
bankruptcy, Homeowner's insurance pays, Everyone profits.
Get a few crapola TV show appearances & a book.
Grandparents now live high on the hog in retirement.
Children inherit estate.

So they say, well, let's at least get something positive out of
the bad situation, eh?

Probably how a lawyer's mind works.

Yep, over the years I've bought a couple of used rigs from them, and
only once took them up on their return policy when the radio didn't
meet my expectations (and that's something I don't consider as their
fault). By all means, invest in some time talking with them to make
sure you're getting what you want.

If I had to guess, based on no other information, I would guess that this is a scheme to get around the inheritance tax, which will tax a bequest from the grandparents to the kids or grandkids, at a confiscatory rate of 45% if they have a sizeable estate.

On the other hand, tort damages for physical injury are generally excluded from taxes. Therefore, the unfortunate injury to the daughter may be a vehicle for all concerned to avoid the inheritance tax. (Or it may not be; I'm only guessing).

Sounds like a clever scheme, by a clever lawyer. The kind of lawyer people pay good money for.

I've owned one of these rigs since February 1996. I wish I had waited a few more months because the price certainly did drop at the two stores in my area that carry it. That and the fact that they've introduced a newer DX-70TH with no upgrade path for their first and loyal customers kind of rubs me the wrong way. Otherwise I have no complaints with the radio or the company.

The receiver is great! Its sensitive and works great on HF. I operate all bands 160 - 6 meters and have received excellent audio reports. For a ham on a budget who wants performance but not all of the bells and whistles that come with a top of the line rig from another manufacturer, this is a great radio.

Usually you can clip a diode on the circuit board next to the microprocessor
to make the unit do what you want. The newsgroup "rec.radio.scanners"
may be of help. If not---email me and I will send you to a place that sells
solder and some good videos on electronics. ((Just kidding)

WOW!! Mike, it's a pleasure seeing you still have a
727 Dual Band HT!! We must admit that this rig had the best
audio of all HT's. Jesus!! These things as LOUD!!!!!! provided they
were never touched inside. Common problem was-the knobs fell off.
Cure--Take the knob off, then take a small piece of tinfoil, then cover the shaft
(the factory precuts the tinfoil real small) to just cover the shaft. The knob
won't ever knock off once you press it on. (If servicing is necessary,
the knob may be removed without damage)

Hey!! Thanks for the idea!! I have just the reverse problem. I have a Radio Shack lamp-intensity control (3 steps) that goes beserk on 40m! When I'm on CW, the lights in the family room go from off to dim, med, bright, off, dim, med.....etc... Same on 40m SSB. It's a touch-control affair: touch any part of the lamp and it changes brilliance. I've tried power-line filters, etc. No joy.

NOW, after reading the above post, I know how to fix it!!

Source record: 189603
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Hello fellow biking hams!

As a contribution to the bike-mobile discussion here is my setup:

Biking dayly fo and from QRL (30 min. ride through the heart of Amsterdam) i use my Albrecht RL102 2meter transceiver with a homebrew 1/4 wave antenna (of 1 mm springwire in a BNC plug) directly on top.
With this antenna setup i can work most 2m repeaters of in a radius of approximately 30 miles, buildings and conditions permitting.

The transceiver goes into my left front/breast pocket of my jeans jacket, secured by the clip. The only drawback is that i cannot see the display that way.

The speaker/mic arrangement i use is a cheap PC multimedia headset with changed plugs and a ptt switch built into the mic cord. A small surplus pushbutton (as used in many discarded VCRs) is easily mounted directly in the cord and finished with 2-component resin or glue.

A spare battery pack (i have approx. 2 1/2 hours of use with one pack) goes anywhere convenient, but quickly reachable (utility pocket of backpack, or coatpocket).

You DO get a few strange looks when you ride along wearing a headset with the antenna sticking out of your pocket and talking to an invisible person. When stopped for crossroads, people may even stare at you as if you were from a different planet, but what the heck.

Have fun and keep in mind that the traffic CAN kill you.....

73 de PE1RHX, Leo.

P.S. Anybody really knows about that transceiver of mine? Seems to be sold under various names, including REXON. Wanna know about the little solderlinks inside: which does what?

Well folks...I am still looking for a FT 736R!

If you have a late model, please leave the following information:
- Are you the original owner?
- Serial number and when purchased?
- Has it ever been repaired/ by whom?
- What options are in the radio?
- On a scale of 1 (lousy rig) to 10 (still in sealed box), how do you rate your rig.
- What is your asking price? I know the "going rate" for these rigs, so let's not waste each others time with silly negotiations! I am a willing buyer.
- Do you have original box/manual/cords/mike/plugs?

Hope everyone has a great holiday season....

Lou

I'm looking for the mods for a Kenwood TH-22AT. I've got one of these fine radios from the US and am using it in Europe. So I'd like ot teach him the 1750Hz tone for opening relais. I know the unit can do it in the european configuration. There are already mods done to it which allow out of band receive and send.

I've been searching various ftp archives and search engines, but somehow I cannot find any information about this radio. It looks like all radios are covered, but mine :-(.

Any hints are welcome !

>giving it back to them for repair).

Wow, I had this happen too. They said a mosfet went south. After I got it back, the receive worked well for another 6 months or so but now the receive is weak again...not as bad as before but when I turn the amp on, I loose a S-meter unit.

The amp works fine but I don't think the receive section is made too well. I'm using a HTX-202 as power input but I've been careful to limit the HTX-202 output to 5 watts (not 8 or 9 watts).

>does someone at least have a mod that will make the 9600 work? Right
>now it is not deviating good enough, although it seems to receive ok.

The problem is that the Mastr II (note no 'e') is a phase modulated
radio, not FM. Thus it can't do the G3RUH/K9NG modulation correctly.
The slickest fix I've seen requires you to replace the transmit Icom
in the radio with a Motorola Micor channel element and FM modulate
that.

The GE Icom just contains a crystal and a temperature compensation
network. The Motorola channel element is a complete oscillator, with
a varactor modulator. Thus it does true FM. You have to rewire the
Icom socket to accept the Moto element. The former GE oscillator
circuit now becomes a buffer stage. You can still feed 1200 baud
to the GE PM modulator, but now you can also feed 9600 baud modulation
directly to the Moto channel element and all is lovely.

For Sale:

Sunair GSL-1900A Kilowatt Linear Power Amplifier. Consists of the
LPA-1900A RF
PA and the PS-1900A power supply unit. This set easlily delivers full
rated
power on all bands. Asking price: $2000.00. I prefer pickup from my QTH
in
Sacramento, CA. If I have to ship it, you pay shipping from zip 95826.
The rf
deck will be about 90 lbs packed for shipping and the power supply will
be
about 150 lbs packed for shipping. (since UPS has a max weight of 150
lbs,
I may have to remove the choke from the power supply and ship
separately)

For those not already familiar with this unit, some specs from the
manual are
listed below.

Covers 1.6 to 30Mhz (continuous) in 8 bands.
Conservatively rated at 1Kw PEP for SSB,
1 Kw for CW, and 1Kw average for AM.
(the book says 300 to 400 for AM carrier only, then
limit the total power with modulation to 1Kw).
Requires 40 watts PEP input to drive to full output.
Automatic tuning (plate and load). Tuning time 3 seconds, nominal.
Uses 4CX1500B, Pi-L output network, and 50 ohm passive input
(no tuning needed for input).
Very low distortion.
Intermodulation distortion: better than -30 db
Harmonic distortion: better than -55db
Power supply strappable for 120 or 240v operation 50-60 hz.
and power consumption is approx 3Kw. (240v operation is
highly recommended and is current strapped for it).

A copy of the Operation and Maintenance Manual will be included. The
interconnect cables between the rf deck and power supply were not
available at a reasonable cost (Sunair wanted $1200 for just the cable
with connectors) so I made an easily restorable modification. The units
are in good condition cosmetically and fully operational.
Also, I have contructed an interface unit that works with my Yaesu
FT-747 for

operating the amplifier. It provides the remote power control, band selection,
and tune functions that would normally be provided a Sunair exciter. This is
included with the purchase of the amplifier. The interface unit can be easily
adapted to work with almost any tranceiver.

Please respond via E-mail to the below address.

from zip 95826. The rf deck will be about 90 lbs packed
for shipping and the power supply will be about 150 lbs
packed for shipping. (since UPS has a max weight of 150 lbs,
I may have to remove the choke from the power supply and ship
separately)

For those not already familiar with this unit, some specs from
the manual are listed below.

Covers 1.6 to 30Mhz (continuous) in 8 bands.
Conservatively rated at 1Kw PEP for SSB,
1 Kw for CW, and 1Kw average for AM.
(the book says 300 to 400 for AM carrier only, then
limit the total power with modulation to 1Kw).
Requires 40 watts PEP input to drive to full output.
Automatic tuning (plate and load). Tuning time 3 seconds, nominal.
Uses 4CX1500B, Pi-L output network, and 50 ohm passive input
(no tuning needed for input).
Very low distortion.
Intermodulation distortion: better than -30 db
Harmonic distortion: better than -55db
Power supply strappable for 120 or 240v operation 50-60 hz.
and power consumption is approx 3Kw. (240v operation is
highly recommended and is current strapped for it).

A copy of the Operation and Maintenance Manual will be included.
The interconnect cables between the rf deck and power supply were
not available at a reasonable cost (Sunair wanted $1200 for just
the cable with connectors) so I made an easily restorable modification.
The units are in good condition cosmetically and fully operational.
Also, I have contructed an interface unit that works with my Yaesu
FT-747 for operating the amplifier. It provides the remote power
control, band selection, and tune functions that would normally be
provided a Sunair exciter. This is included with the purchase of
the amplifier.

Please respond via E-mail to the below address.

As others have said great rig. Actually has a tracking front end. When I swept the receiver maintained about -119 dbm from abt 140-167 if I recall. Very rugged radio. Used it in Search and Rescue for a number of years. Dropped more than once climbing in and out of helicopters. Also seemed to hold up well against moisture. Was also a very good high power 6-7 watt Tx rig. Given its size it was able to sink the heat better than some of the smaller "newer rigs". I'm sorry I don't have mine any longer.

I tried to order a replacement microphone on an ALINCO DR_570T radio.
ALINCO REFUSED to sell it to me direct even though it is an older model.
They said to call an authorized dealer. First I tried Ham Radio Outlet
in New Hampshire. They didn't want to take the time to look up the part
and order it. Then I tried Amatuer Electronic Supply in Milwaukee. I
put in the order with my credit card # to the salesperson 3 weeks ago.
I called today to see wy it is taking so long. The order was never put
in!!! I was told I now have to send a check or cash in advance for this
mic. I never received a call from them 3 weeks ago saying that they
counldn't use my credit card. I will not purchase any ALINCO PRODUCTS
at all and will not patronize HAM RADIO OUTLET or AMATUER ELECTRONIC
SUPPLY!!!!

Hi

I have a c228a HT and have had the dual band mobile. Standard is a company that started in commercial and moved to amateur and the radios show it on the inside and they are bullet proof to intermod.

Just my $.02 worth.

You know what. Federal law is irrelevant. It does not exist outside the Federation. That is, in 90% of the world, the FCC have no power. Why do the USA amateurs always assume they are the only ones on the net while happily chasing DXCC?

This has been suggested before but.....put a switch inline with the lamp.
When you're on the radio, turn the lamp off. When you're not on the radio,
switch it back on.

I remember from the late 1970's and earily 1980's a receiver mod for the Kenwood TS520 and R599 receivers (W6TOG?). It replaced the FETs in the preamp, mixer and first LO with MOSFET to lower the front-end receiver noise. Does anyone remember this mod and have a copy of what was needed to be done? Many Thanks and 73's in advance. D.Pat Breeden WB3KUM/9

I bought a new antenna from them... It was missing half the parts. I called and spoke with them, they basically said too bad, it's not our problem... call the manufacturer!. I asked them if they'd just exchange it for another of the same and send it back to Larsen themselves and they said no... told me all sales were final! This was about a month ago. Called larsen and they asked if I returned it to the dealer for exchange, When I told them what happenned, they asked who the dealer was, as their policy is the dealer should have handled it for them... They sent me the parts overnight, saturday delivery at no charge, and were going to recomend to their marketing department that A.E.S. no longer be a distributor of their products.

Later,
Dave

I'm curious about something. Why would you expect an upgrade path on a piece
of hardware? This normally isn't possible. When you buy a car do you expect
to upgrade as the next year's model is introduced?

Sounds wierd to me. AES is normally a great store to deal with. Larson sure
won't drop them. About 1/3 of their amateur radio sales are through AES is
they art typical of other manufacturers. No one tosses away 1/3 of their
business over a trivial problem like this.

From: hershman <hershman@ix.netcom.com>
Message-ID: <32A0FD65.4DBA@ix.netcom.com>
Source record: 189692

Why so they have such a poor policy of having to order a replacement microphone from a dealer when Alinco knows the DR-570T has been out of productio for over 5 years. NO DEALERS have the mics! NO DEALERS want to take the time to special order it for me. When one did (AES), they took the order with my credit card # etc. but never put the order through! Then 3 weeks later I tried to find out what happened and now they want money up front after screwing up the first order! Ham Radio Outlet in New Hampshire didn't want to bother with looking up the part # for the Dr-570T radio. I won't bother to call them for my order of the Icom 756 in two months.
I can see if Alinco makes me go through A dealer if the Model is a recent model and the Dealer has the microphones in stock. I feel like I am getting the run around!!

I can pretty much believe that. After reading those it makes me wish
I had a daughter so I could forbid her to marry a lawyer. :)

>>Why is it that when you tell a 'joke' about an Irishman it is called
>>tasteless; when you tell a joke about a black it is called racist, and
>>when you tell a joke about a lawyer it is called funny?

Even though you didn't post this, I missed the original response so here
goes:

The reason it's funny is because by and large most lawyers are lower
than slime.

>company's wishing to posses these frequencies for digital wireless palm
>tops and they are going to get us so disgusted with no code and no
>license operators,that we will move on,

Who is the "they" in they are going to get us so disgusted with code/no code? The FCC? I don't think they're leading the debate between code/no code. It is the hams who are debating among each other about that issue. The "they" is us.

>they wanted to drop the service
>in 1984 but the ARRL picked up the ball and ran with it,now they are
>getting tired too,

Why is the "they" here? I don't remember the FCC wanting to drop the service.

I am looking for a used stand-alone video standards converter that accepts PAL formats (if it accepts SECAM also, better) and outputs NTSC 3.58MHz (U.S. standard) via RCA jacks. This is for my sat. DXing. All offers considered.

TNX,

I don't have one of these amps.

Do they use PIN diodes, or do they use a relay for T/R switching? It _sounds_
like some of the output is getting into the receive preamp. Perhaps it is a
poorly desgined PIN diode switch. A relay should have enough delay to prevent
this sort of problem.

Just a thought, your mileage may vary

I just picked up a Kenwood TM-401A 440 Mhz FM transceiver. Naturally I am interested in finding out more about this particular rig. It came with its instruction booklet and from what I can gather it was build in 1985.

Are there any Kenwood reflectors or ftp archives that might contain information on older rigs? specifically I am looking for any mods, product reviews, general comments from the ham community on this radio.

Thanks,

Bryan

Source record: 189532

Merry Christmas all,
I have the following problem with my Kenwood TS-440SAT:
It works just fine on 160, 80, and 40 meters.
When I go to 20 meters, my xmit audio becomes distorted.
When I go to 15, it loads just fine but when I key the mike, and hold
it on a steady key, it cycles (keys) on and off constantly.
Have not really tried it on 10 meters.
This happens on all antennas that I have plus the dummy
load.
Has anyone had this problem and if so, what was the fix..??..
Any help would be greatly appric.... 73's.. Terry KI7PS

Message-ID: <849452567.27804@dejanews.com>
Source record: 189533

Hi all hams,

I love my little FT-50R, although it certainly has not "all the features you want" (as stated in the propagation materials :) It surprises that such a mature HT lacks things like two receivers, repeater function, eight chars display etc. Another black eye is its awful antenna... Well, we've got to cope with missing second receiver, but is it really, -really- impossible to make FT50 operate in full duplex? And, if so, why?
Thanks much for a little hope... :)

Several of us in the Lafayette area are using GE Custom MVP's with a simple
mod to operate 9600 bps using the G3RUH modems. Although txdelay could be
faster (shorter), it seems to work flawlessly.

With the no-code rush about over, a lot of dealers are falling by the way-side. We have lost Oklahoma Comm Center, Tucker, and a couple of smaller mail order places in the past year. A lot of the testing sessions are being cancelled because no one is showing up. I think the mail order places will be down to 3-4 large companys soon. As for service, I have never had good luck with AES, or HRO. The cost has gone out of site, and the equpiment is getting to be high priced plastic. I will only buy used equipment and from local people that I know.

1200 baud is the standard for VHF packet. There is the rare 2400 baud,
but used mostly for dedicated links between 2 stations. 9600 has a wide
usage on 440, and I've even seen some 19200, but these require radios
either factory capable for 9600+, or modifications you perform to make
them 9600 capable. There is a 56K packet modem available now, but
without the local PBBS being on the same modem, you'll only be able to
use 1200 anyway.

Later,
Dave

I just got one And I love it. For a price of $100 less than the nearest reasonably featured dual band, I will deal without full duplex. As per your question, as far as I can tell, there seems to be only one tx/rx path to the antenna port past the bandswitching on the schematic.

73 for now, Will, N1PXA

I have some telegraph keys I would like to sell but don't know what they are worth. I would appreciate it if someone could tell me their approximate value. They include a J-38 straight key, a Brown Brothers Model CTL combination paddle/straight key, and a J-45Fr straight key that is hinged and attached to a metal leg strap.

Thanks

Tim

Hi!

Radio Shack PRO-50

Last year's model in very good condition.

Features:

* 20 channels
* 30-50 MHz VHF Lo
* 50-54 MHz 6m Ham
* 137-144 MHz Government
* 144-148 MHz 2m Ham
* 148-174 MHz VHF Hi
* 380-450 MHz Government and 70cm Hame
* 450-470 MHz UHF Lo
* 470-512 MHz UHF Hi

Includes Free Universal AC Power Adapter With 6 Different Plugs

Asking $130.00

> Why do the USA amateurs always assume they are the only ones on the
> net while happily chasing DXCC?

It would be irrelevant outside the US. But that does not make the
statement untrue. If were against US federal law to posess such an amp
- then - it's a vilaotion of federal law. It just wouldn't be of
concern to someone outside the FCC'c jurisdiction. He said "federal
law" - so YOU know who it applies to.

If he said it was a violation of international or intergalactic law the
you could complain about his accuaracy.

FWIW - Its not illegal to posess such an amp in the US.

Regards

Subject: BUY A BRAND NEW PLAYSTATION FOR ONLY $5!!!!!!!!!
From: heather8@flash.net (Heather)
Date: Sun, 01 Dec 1996 03:27:20 GMT

GUYS, TRY THIS OUT IT REALLY WORKS, I STARTED IT 2 WEEKS AGO AND HAVE
MADE
OVER $500!!

------------------------------------------------------------------------
----------------------------------------
THIS IS THE FAIREST MOST HONEST WAY I KNOW OF TO SHARE THE WEALTH!!

Hello! Would you like to make thousands of dollars, quickly,
legally'
with NO CATCH? Then keep reading.... Please thake a few minutes to
read
this article, it will change your life, just like it did mine. It's
true! You can make up to or over $50,000 in just 4-6 weeks, maybe
sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If your
interested, please, keep reading. If your not, Then I apologize for
wasting your time.
Here we go, a little while back, I was browsing these
newsgroups, just
like you are now, and came across an article similar to this that said
you could make thousands of dollars within weeks with only an initial
investment of $5! So I thought, "Yeah, right, must be a scam", but I
was
curious, like most of us, so I kept reading. Anyway, it said that you
send $1 to each of the 5 names and addresses stated in the article.
You
then place your own name and address in the bottom of the list at #5,
and poat the article in at least 200 newsgroups. (THERE ARE
THOUSANDS!)
No catch, that was it. So after thinking it over, and talking to a few
people first, I tried it. I figured what have I got to lose except for
5
stamps and $5, right?
Well GUESS WHAT!... within 7 days, I started getting money in
the mail!
I was shocked! I still figured it would end soon, and didn't give it
another thought. But the money just kept coming in. In my first week,
I
made about 20 to 30 dollars. By the end of the second week I had a mad
```

total of over $1,000!!!! In the third week I had over $10,000 and it's
still growing. This is now my fourth week and I have made a total of
just over $42,000 and it's STILL coming in..... It's certainly
worth
$5, I spent more than that on the lottery!
Let me tell you how this works and most importantly, WHY it
works...
also, make sure you print a copy of this article NOW, so you can get
the
informatrion off of it as you need it. The process is very simple and
consists 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each
piece of paper
"PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 4."
now get 5 $1 bills and place ONE inside EACH of the 5 pieces of paper
so
the bill will not be seen through the envelope tp prevent thievery.
Next, place one paper in each of the 5 envelopes and seal them. You
should now have 5 sealed envelopes, each with a piece of paper stating
the above phrase and a $1 bill. What you are doing is creating a
service
by this. THIS IS PERFECTLY LEGAL!
NOW, Mail the 5 envelopes to the fallowing addresses:

1: B. Fraka, 2614 Apollo Dr., San Jose, CA. 95113

2: Ash, 1325 15th street apt #108, Sacramento, CA. 95874

3: A. Wensel, 1306 Park Ave., Williamsport, PA. 17701

4: Hafer's, 952 Anderson Lane., Kalispell, MT. 59901

5:D.Morand 95 Boutelle St.,Leominster,MA 01453-6303

STEP 2: Now take the #1 name off of the list that you see
above,
move the other 4 names up. (5 becomes 4, 4 becomes 3, etc..) and add
YOUR NAME as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this
article as
clost to original as possible. Now, Post your ammended article to
atleast 200 newsgroups. (I think there is close to 18,000 groups) All
you NEED is 200, but remember, the MORE you post, The more money you
make! Dont know HOW to post in the newsgroups? Well do EXACTLY the
following:
FOR NETSCAPE USERS,
1) Click on any newsgroup, like normal. Then click on 'To
News',
which is in the top left corner of the newsgroups page. This will
bring
up a message box.

2) Fill in the Subject with a FLASY title, like the one I
used.
3) Now, go to the message part of the box and retype this
letter
exactly as it is here, with the exception of your few changes.
(remember
to add your name to number 5 and move the rest up)
4) When your done typing in the WHOLE letter, click on 'File'
above the
send button. then, 'Save As..' DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE
IT. (so you don't have to type this 200 times :)
5) Now that you have saved the letter, go ahead and send your
first
copy! (click that send button in the top left corner)

********6) THIS IS WHERE YOU POST ALL 200! OK, go to ANY newsgroup
article and click the 'To News' button again. Type in your flasy
subject
in the SUBJECT BOX, then go to the body part of the message and leace
your cursor here. NOW click on 'Attachment' which is right below the
SUBJECT BOX. click on attach file then find you letter wherever you
saved it. click once on your file and then click 'open' then click
'OK'.
IF you did this right, you should see your filename in the attachment
box and it will be shaded green. NOW POST AWAY!!

IF YOUR USING INTERNET EXPLORER:

It's just as easy, Holding down the left mouse button,
highlight this
entire article, then press the 'CTRL' key and 'C' Key at the same tome
to copy this article. Then print the article for your records to have
the names of those you will be sending $1 to. NEXT go to the
newsgroups
and press 'POST AN ARTICLE' Type in your fancy subject and click the
large window below. Press 'CTRL' and 'V' and the article will appear
in
the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5
NAMES** Now re-highlight the article and re-copy it so you
have the
changes... then all you have to do for each newsgroup is 'CTRL' and
'V'.
and press 'POST' IT's That EASY!

7) THAT'S IT! all you have to do is jump to different
newsgroups and
post away, after you get the hang of it, it take about 30 seconds for
each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MOR
MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin recieving money from around the
world within

days! You may eventually want to rent a PO BOX due to the large amount of mail you recieve. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESS ARE CORRECT**

Now the WHY part: Out of 200 postings, say I recieve only 5 replies (a
very low example) So then I made $5 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of
the original 5, that is another $25 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only recieve 5 replies each, I will
bring in an additional $125! NOW, those 125 persons turn around and post
the MINIMUM 200 with my name at #2 and only recieve 5 replies each, I will Make an additional $625 dollars! OK, NOW here is the FUN part, EACH
of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each ONLY recieve 5 replies, that just made me $3,125!!! With a original investment of only $5 dollars! AMAZING! And as I said 5 responses is actually VERY LOW! average is probably 20 to 30!
so lets put those figures at just 15 responses per person. Here is What
you will make!
at #5 $15
at #4 $225
at #3 $3,375
at #2 $50,625
at #1 $759,375
When your name is no longer on the list, you just take the latest
posting that is appearing in the newgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT NUMBER 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOING THE INTERNET AND READING THESE ARTICLES EVERYDAY, JUST LIKE YOU ARE RIGHT NOW!!! So can you afford $5 dollars and see if it really works? I think so..... People
have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joining the actual Internet. Remember, play FAIRLY and HONESTLY
and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newgroups to

make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST
POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE THE MONEY!!
GOOD
LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS
FROM THIS, WHICH IS TONS OF EXTRA CASH. ** By the way, if you try to
decieve people by posting the messages with your name in the list
and not sending the money to the people already on the list, you will
not get as much. Someone I talked to knew someone who did that and he
only made about $150 dollars, and that's AFTER seven or eight weeks!
Then he sent the 5 $1 bills, people added him to their lists, and in
4-5
weeks, he had over $10K. THIS IS THE FAIREST AND MOST HONEST WAY I
HAVE
EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING
BUT
OUR TIME!!! You also may want to buy mailing and email lists for
future
$$$. Please remember todeclare your extra income. Thanks once
again!$$$

Trish,

Read the review in June 1996 QST, page 61. They liked it.

There have been many positive comments on this newsgroup. I'm
thinking of building one myself as an extra rig.

In my opinion, you can't go wrong with AES. I have bought some used, mostly new from them and others over the years. They are above reproach; this cannot be said for several other multi-store chains or individual dealers.

When they say a rig is in "X" condition, it is. Of course, you have the option of returning it, losing only shipping.

Sometimes their prices are a bit higher. Then I decide whether to buy elsewhere or go with AES. I will go with them regardless, if the amount is not too great.

Hope this helps. BTW, service is good at Milwaukee and Wycliffe.

> at all and will not patronize HAM RADIO OUTLET or AMATUER ELECTRONIC
> SUPPLY!!!!

Interesting, I checked Alinco's Web page, and under the "service" page,
they have a form for ordering various accessories for their radios. However,
they state at the beginning that for mobile radios the DC power cords, tone
boards, mics and brackets are dealer items.

I am interested in how you resolve this because I own 2 of the 570 radios.
They are good radios, but I have noticed that the PTT switch in the mics
is getting rather flakey. I had thought about just replacing the micro-
switch, but it looks like that may be the only fix if they won't sell the
mircophone.

If you get no help from any Alinco dealer, I would call Alinco back and
relate their poor dealer support to them. They should be interested in
how their custormers can buy (or not buy, in this case) Alinco items.
Perhaps once they hear about all the run-arounds that you've had, they
would be willing to sell you the microphone.

Keep us informed on how this goes. I'd be interested in knowing whether
I can ever get parts for my 570's also.

Hello there.
This 'Scope's sweep stopped functioning (well the trace dosen't go
from side to side). All other functions ie voltage measurements etc
seem to be working.
I have the manual and can forllow it but fixing 'scopes is a bit out
of my league.
I also have an audio generator,d.m.m. and a borrowed portable 'scope.

I was wondering if anyone can help me get the thing working again,
maybe someone has come across the fault before.

If not thanks for reading this anyway.

I must disagree with you! (Thank the Diety for being an American)
I had an extremely positive response from ALINCO on a direct
"Provider/Consumer" basis. I called their customer service line and
explained the troubles I had had with a DJ580t. The technician provided
two possible ways to resolve the trouble and sold me the micro-switches
to repair the HT. He even sent me a diagram! When my technical ability
stopped, I again called the service line, spoke to the same technician
and he suggested that I send the HT to the factory for their technicians
to fix the switch. Total time I was "out" the radio was less than 2 full
weeks. The radio works like brand new and the broken parts were returned
with the radio.

I was so impressed with the quality of service, I sent a letter of
appreciation to the company.

3800. WTB 134 Probe Amp or Passive Term Box for Tek P6021 Current Probe

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-01 00:00:00 UTC
From: "Michael D. Harmon" <mharmon@digmo.org>
Message-ID: <57qpi7$18ja@news.missouri.edu>
Source record: 189706

A couple of years ago, a friend of mine gave me a Tek P6021 Current Probe.

It appears to be in OK condx, but I need either a Passive Termination box or a Model 134 Current Probe Amp to be able to use it. I'm not in the service business, so I really can't justify the cost of a new amp or term box. If I can't find one <cheap>, I'll probably just end up pitching the probe.

I don't need (or want to pay for) anything in <new> condx. I have the manual for the probe, which includes the schematic for the term box, but I don't have any info at all on the 134 probe amp.

Does anyone out there have either of these units they would be willing to part with for a reasonable priice? If the price is right, I'd be glad to pay for the shipping.

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

>> and has had fuel pump noise? If so any suggestions on a cure?

>What I did on my '89 Toyota was put a 0.1uF capacitor across the wires at
>the
>fuel pump.

I missed the original post - I have a 92 Saturn SL2, and quite a bit of noise from the fuel pump around 10 meters (must drive the CBers crazy). I don't use HF there much, but hope to next year, so I'll be digging into solving that problem.

I'll be watching this thread for more suggestions. A shunt capacitor might do it, but the pump is inside the gas tank on my model, so I'll just be able to get close.

73,
Gary

3816. Help please on NEC PC-8401A-LS "Starlet" laptop

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-01 00:00:00 UTC
From: morris@cogent.net
Message-ID: <morris.986.0048B447@cogent.net>
Source record: 189722

I recently came across a NEC PC-8401A-LS "Starlet" laptop, with absolutely no documentation, or anything but the unit itself. It powers up, gives a display, seems to work, but I really can't accomplishg anything.

To start with, I would like to find out what the pinout for the printer port is, what the "CMT" connector is for, and would like to know what the connector on the left side behind the door is for. Also, how do delete some of the garbage files that are shown, andhow to use the FILER program.

My original idea was to save this lovely little machine from the trash heap, and to use it for packet. Now I think I can see a few more uses for it, including as a ultraportable dumb terminal for some field maintenance of some embedded systems.

Thanks in advance.

3817. YAESU FT-51R _Tx PROBLEM_!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-01 00:00:00 UTC
From: XSQM50A@prodigy.com
Message-ID: <57ref7$163m@usenetp1.news.prodigy.com>
Source record: 189723

SUBJECT: FT-51 PROBLEM / QUESTION - HELP!

I have a problem with my FT-51 that I cannot currently figure out --

A couple of nights ago, I left my FT-51 scanning on battery, and I fell asleep. When I woke up, the battery was dead (obviously), and when I hooked it up to some power, I had lost all of my memories. (The CPU seemed to have reset)

When I tried to enter some of my repeaters again, I noticed that the Tx range of my HT had actually been reduced to 144-146 MHz, and 430-440MHz. I have tried resetting the CPU a few times, and I have tried various features on and off (such as extended Rx), but nothing seems to work.

I have been told that it might have somehow become stuck in the European Mode - How do I get my radio back?

Can anyone out here please help me???

Thanks for taking the time to respond!

73,
Bill - KF6CNP

3821. Need Realistic HTX-100 10M Mobile Info

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-01 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <32A13ECF.3BAE@earthlink.net>
Source record: 189727

I need information (or a copy of the manual) for the HTX-100 10 meter mobile. I just picked one up at the local ham swapmeet without any docs, and could probably benefit from the info, and/or manual and schematics. Also, are there any mods out there for this rig? After I picked up the rig, as I walked the swapmeet aisles browsing, lots of fellow hams stopped me to ask what I paid. Seems this rig is a popular model. I don't know - I normally don't buy Radio Shack, but understand that this is really a Uniden - maybe a 2510 or similar.

Any info appreciated.

Hello,
I am selling the following for a buddy of mine:

VHF Motorola HT1000 16 Channels W/ A-B-C Switch (Good Condition)
2 Batteries (In Great Condition)
1 Hour Rapid Charger
Public Safety Microphone
Antenna Included

He's asking $475 FIRM for all.... this includes Shipping!

If interested please Email me back!

Doug,

I have my manual and programming info handy for my u-16 icom.. send me
e-mail with the code that you are using, and I will tell you if it is the
right code or not.. 8-years is a long time to try and remember a
programming code !!

Gee, good for you Jim! How much did he charge you?

Don't you ever wonder about the screwball laws being written everyday
to restrict and regulate our laws? Do you think they're written by
Joe Concerned Citizen?

How about the financial impact lawyers have on our everyday lives?
Every time they win some humongous settlement in some pea brained
case it ends up costing the taxpayers and consumers.

Ever look up justice in the dictionary? How about all those crooks and
murders that get off every year due to some "technicality"? Ever hear
of the case of the divorce where the mom was suicidal and mentally
unable to cope without anti-psychotic medication and the father was
"normal"...mom got custody.

The responses you see here are direct reflections of our own experiences
and disdain for lawyers. When one threatedned to sue me, I posted it
so the world could see what they are really like.

Sorry you don't agree that the world would be a safer and cheaper place
without them.

Source record: 189339
Cross-posted to: rec.radio.amateur.misc,rec.video.cable-tv,rec.ham-radio,rec.radio.amateur.equipment

Studioline COMPANDING FM RECEIVERS with up to 90db audio s/n ratio for Cable
(and other RF Distributed) Audio (VIEW PHOTOS at: http://www.lasermotion.com)

THEY ARE: Three receivers in one box with "F" connector input,
and RCA phono outputs for two channels of audio.
Two receivers are audio channels, and the third receiver
is dedicated to control and programming functions.
The Studioline unit is fully software configurable.

THE PRICE: $ 37+shipping/each Receiver.
$185 / 5 units, we pay shipping
$ 15 (US postage paid) for schematics
(Original Large Quantity Manufacturing Cost in Japan = $321 /each)

THE STORY:

Studioline technology for economically distributing truly studio-quality audio
programming over existing Cable & Wireless broadcast systems was
originally developed by FM Systems, Inc.., Santa Ana, CA. with funding
provided by The Chronicle broadcasting company in San Francisco, CA. We
acquired the equipment and rights. Pricing is very affordable. Subscriber
Receivers Are Now Available by FedEx next-day shipment from Hayward, CA.
Head End transmitters are available
inexpensively from FM Systems, Inc., Santa Ana, CA.

*** COMMERCIAL APPLICATION EXAMPLE: ***

PUBLIC CABLE AUDIO APPLICATION:

COSTS: Estimated to be less than 25% of the cost of Digital Music Express
(DMX).
We offer financing, and maintain an inventory of exchange and
installable
units at your facility.
HEAD END: (Photo)
FM Systems, Inc. Transmitters: Each 19" rack chassis of
3 Stereo Channels is $4750.
SUBSCRIBER END:
Studioline Receivers: $37/ea. purchase, or $3.91 per month rental.
BREAK-EVEN POINT:
As few as 200 installed units at a monthly fee of only $5.95 per subscriber.

*** RF CARRIER SPECIFICATIONS: ***
Frequencies: 72- 76 MHz = 9 Stereo Pairs.
108-126 MHz = 60 Stereo Pairs.
Bandwidth: 300 KHz per stereo pair.

Level on cable: -15 dB to -25 dB/video.
Negligible cable system loading. (!)

*** AUDIO SPECIFICATIONS: ***
Signal to Noise Ratio: As high as 90 dB.
YES - That is NOT a misprint !!
(80 dB audio demonstrated at 35 dB RF carrier/noise ratio!)
Designer tells of "Excellent Audio Signal decoded
on a terrible (!) system WITH 65 AMPLIFIERS IN SERIES !
The signal was OTHERWISE USELESSLY NOISY but Studioline recovered it".
Frequency Response: 15 Hz - 20 KHz, ±1.5 dB.
Harmonic Distortion: Typically < 1%.
Stereo Separation: 70 dB, 20-20 kHz.
(There are two completely separate
high sensitivity audio FM receivers,
each with a low-noise Compander Section)
Audio Output: 1 Volt, low impedence
Ready to plug into "aux" or "tuner"
inputs of customers' existing premium stereo systems.

*** PROGRAM SOURCES: ***
Many special interest audio programs from satellite.
Numerous ethnic language broadcasts..
Music for any taste, education, and local live entertainment,
concerts, symphony and events.

*** OPERATING, and OTHER FEATURES: ***
These are completely software driven,
flexible devices,all programmable from the cable "head end".
The design team is available for consultation or for
modification of the design.
With "flag" signals on distribution cable,can utomatically sense
channel TV is tuned to, for true studio sound to accompany video.

Very high quality, and attractive looking receivers
Manufactured in Japan.

14" Wide x 10" Deep x 3.5" High. 7.5 lbs. 105-125VAC. 25 Watts.
Unique frequencies and modulation technology make for
theft-proof and secure channels.
Addressable and authorizable from head end over cable
by individual channel and unit serial number.

*** APPLICATIONS: ***
PRIVATE CABLE:
in HOTELS, RESORTS & SPAS.
PUBLIC CABLE:
Enhanced and premium cable service and
pay-per-view movies.
Precisely targeted outlets such as Muzak franchises,
Hotels, Discotheques, and Lounges.
Live broadcasts of entertainment, symphony and special events.

Any time the special presence of studio-quality sound!
(Or two completely separate audio channels)
can make a difference to your performance and your subscribers.
THEATRE MANAGEMENT:
Distribution of up to 60 separate channels of sound
FACTORY ENVIRONMENTS:
Broadcast and directed paging.
BACKGROUND MUSIC SERVICES:
High quality sound for a change
PUBLIC INSTITUTIONS
Simultaneous Translation Services in Senates Parlaments and other groups.
This is a bargain and will not wait long !

>=20
Well, I don't know what the laws are in YOUR country Tony, but
I'll quote you our Part 97:

"
97.315
(a) No more than 1 unit of 1 model of an external RF power amplifier =
capable of
operation below 144 MHz may be constructed or modified during any =
calendar year by
an amateur operator for use at a station without a grant of type =
acceptance. No amplifier
capable of operation below 144 MHz may be constructed or modified by a =
non-amateur
operator without a grant of type acceptance from the FCC.
"

What part is incomplete and inaccurate?

The courts would have a hard time convicting a ham of posession of a =
"CB" amplifier,
unless the operation was NOT within band and power regulations of =
his/her license.
Conversely, possession of said amp without gear capable of exciting it =
on a band where
the licensee or operator has no such priviledge cannout be found to be =
de facto evidence
of illegal use.

Manufacture or capability does define culpability. There are plenty of =
RF devices which
are type accepted, yet have no "transmitting" purpose. A good example is =
a RF plasma

exciter for semiconductor production or a RF based heating or drying = system such
as those found in wood mills around the world.

Oh yes. And since when is educating those with bad information = criticizing? The
information is in the public domain. Ignorance of the information's = existence is
no excuse.

What part is incomplete or inaccurate?

I've got to say, amateur radio will change... and in the course of it's evolution, I believe it will draw strength on its roots as a platform for individual expression. Beauracracy and organisation are features of life that are used to control, bring order, and sometimes subvert the rights and freedoms of individuals.

It is no lie to say 'amateur radio will never die'. It may become leaner, meaner, and 'greener', but it will always find a crack of bandwidth... and the energy that flows out of that crack, will always carry with it... the stamp of its making... humanity and the call of the wild in perfect synergy.

Fear not the flood of time, for your ark will ride the torrent and always bring you to safe shores. Such is the nature of the ether, electromagnetism, and the very principle of radio. Whilesoever the sun shines, there will be propogation... so go forth and multiply (propogate).

From: moo@midtown.net
Message-ID: <moo-2708561237320001@sl3.midtown.net>
Source record: 189344

I recently bought an old Heathkit Cheyenne tube transmitter for hams, and I plan on restoring it. It's missing the mobile power supply, however. I need a power supply that runs off 12 volts input and puts out 300 volts at 50 milliamps AND 600 volts at 110 milliamps for the 6146 final amp tube. Must have a 6 pin Jones plug for output, and probably should have pos/neg alligator clips so it can be hooked directly to a car battery. Mail moo@midtown.net.

> the Federation. That is, in 90% of the world, the FCC have no power.
> Why do the USA amateurs always assume they are the only ones on the
> net while happily chasing DXCC?

It would be irrelevant outside the US. But that does not make the
statement untrue. If were against US federal law to posess such an amp
- then - it's a vilaotion of federal law. It just wouldn't be of
concern to someone outside the FCC'c jurisdiction. He said "federal
law" - so YOU know who it applies to.

If he said it was a violation of international or intergalactic law the
you could complain about his accuaracy.

FWIW - Its not illegal to posess such an amp in the US.

Regards

In my opinion, you can't go wrong with AES. I have bought some used,
mostly new from them and others over the years. They are above reproach;
this cannot be said for several other multi-store chains or individual
dealers.

When they say a rig is in "X" condition, it is. Of course, you have
the option of returning it, losing only shipping.

Sometimes their prices are a bit higher. Then I decide whether to buy
elsewhere or go with AES. I will go with them regardless, if the amount
is not too great.

Hope this helps. BTW, service is good at Milwaukee and Wycliffe.

Interesting, I checked Alinco's Web page, and under the "service" page,
they have a form for ordering various accessories for their radios. However,
they state at the beginning that for mobile radios the DC power cords, tone
boards, mics and brackets are dealer items.

I am interested in how you resolve this because I own 2 of the 570 radios.
They are good radios, but I have noticed that the PTT switch in the mics
is getting rather flakey. I had thought about just replacing the micro-
switch, but it looks like that may be the only fix if they won't sell the
mircophone.

If you get no help from any Alinco dealer, I would call Alinco back and
relate their poor dealer support to them. They should be interested in
how their custormers can buy (or not buy, in this case) Alinco items.

Perhaps once they hear about all the run-arounds that you've had, they would be willing to sell you the microphone.

Keep us informed on how this goes. I'd be interested in knowing whether I can ever get parts for my 570's also.

Subject: FS: 800-900 RF Amps

I just bought a truckload of Cellular Amps from a local scrapyard..They have been kept dry..Being a typical Ham, I couldn't stand to see them put in the Crusher...
Here's a description of what I have: 25 units all same style, different MFG. they are 10 lbs apiece, major heat sink fins, size is 3.5" x 5.25" x 12 long. In/output connections within DB-17 shell connector, they require 24VDC..
I think these units are a great basis for rebuild to 900 MHZ ..I just need to find the Right person or group...

Here's a parts breakdown and MFG..
7 units Mfg by Autoplex (AT&T) Model J41650FB-1L1, somoma scientific CX8AI, Transistors: Acrian 46076-80456

2 units Mfg by Autoplex (AT&T) Model J41650FB-2L2, OMC UD8690-T, tranistors: 2/MRF-891, 2/PH BLV59 H 8931

6 Units by Western Electric, model 22090, tranistors 2/SDI-496, 2/Acrian 39017-0154a

5 units by APX, Model 100, 2/TKD-CU49, 2/TKD-CU421, 1/HD-0900M3-HR5, Transistors: NEC 2SC3538

7 units by Decibel products, model DBPO45D01B-G, Ocean microwave UD-8690-TH-1, MHW812A3, Tranistors MRF898

I also bought lots of 4 channel combiners by Nothern Telecom, Power loads? Celwave BC-900-AA, RCL 3way power dividers, Meca 4way couplers, a few 800 rec preamps: model Trontech KS21583-L2

I need to move this equipment out!! I really don't need it, I'm a VHF/UHF guy and not interested in 900 Mhz stuff....But I couldn't pass it up!!!

Prices: 1 amp shipped to your door UPS/COD: $35.00, Take 2 for $50.00...Better deal? 4 for $100.00!! and I will throw in some of the combiners in...On the 2 4 channel compiners (looks like a duplexer) Make offer...Heavy!
I will trade for any kind Motorola equipment, even Mt-500's or HT-90's..No P-200/P-220 or trunkmounts please....

I don't have one of these amps.

Do they use PIN diodes, or do they use a relay for T/R switching? It _sounds_ like some of the output is getting into the receive preamp. Perhaps it is a poorly desgined PIN diode switch. A relay should have enough delay to prevent this sort of problem.

Just a thought, your mileage may vary

> 534 Shannon Way | Guaranteed! | Email to ke4zv@radio.org
> Lawrenceville, GA 30244 | |The GE MASTR II that I have has a complete oscillator in the
channel
element. I have found that you can modulate the compensaion circuit in
the channel element and get very good performance up to 9600. Several
years ago I built a small unit using the exciter section of a MASTR II.
The results were very good past 9600. The only draw back is that the
compensation line is very sensitive and requires a very stable DC level
to maintain the frequency. The unit that I built biased the compensation
line at approximately 5 volts DC +/- 1 mV. The " 5 volts was adjusted
to give the best modulation balance. If you need the temperature
compensation as well you will have to sum in the TC to the DC bias.

> >
> Well, I don't know what the laws are in YOUR country Tony, but
> I'll quote you our Part 97:

Snip Quotation of CFR 47 Part 97 Section 97.315.

I confess, James, that I am a US citizen who has been licensed since
1963, apparently since a year before you were born, so I'm not sure
that comments about MY COUNTRY and also posting copies of the FCC
regulations to me was entirely necessary.

> What part is incomplete and inaccurate?

You wrote that it is illegal to sell amps capable of operation in the
CB band. However the text of 97.315 makes it plain that it is not
always illegal to sell such amplifiers, so plainly your statement
incomplete and thereby inaccurate and misleading.

For instance, Part 97 has no bearing on any equipment EXCEPT and ONLY
EXCEPT if that equipment is intended to be used in a station licensed
under Part 97 for use in the Amateur Radio Service. Read it again
slowly and I'm sure that you will see.

Further, and as your quotation explains, there are even exceptions to
a narrower blanket statement that the sale of CB-capable amps for use
in an amateur radio station is always illegal. If you wish me to
enumerate the exceptions, I'll be pleased to do so, but as they say
on Perry Mason, that section speaks for itself.

> Oh yes. And since when is educating those with bad information > criticizing? The
> information is in the public domain. Ignorance of the information's > existence is
> no excuse.

Educating newsgroup readers to the correct provisions of the FCC regulations and explaining their true meaning will never bring any proper adverse comment from anyone, let alone from me.

> What part is incomplete or inaccurate?

Your quotation of CFR 47 Part 97 Section 97.315 is accurate and complete, but what you posted to the newsgroup was not. The text that you now correctly quote is 405 words long, so you would hardly expect that your 12 word sentence on the sale of CB-capable amplifiers could be complete and accurate. I have always found the FCC regulations to be very well written in clear and plain language, so any abridgment or paraphrasing is unlikely to be accurate.

From ARRL InfoServer:
ARRL RF Touch Lamps and Dimmers Information Package

TOUCH LAMPS

RF Touch lamps are RF-operated devices that often cause, or are susceptible to, EMI problems. They have a free running oscillator that is very broad and rich in harmonic energy. This oscillator is hooked up to a touch plate that changes the frequency of the oscillator when a hand is placed near the plate. Unfortunately, this plate also acts as an antenna, radiating some of the energy of the oscillator, or picking up nearby radio signals. When the former happens, it can interfere with other services. When the latter happens, the circuitry inside the lamp reacts the same way that it would when the plate is touched -- the lamp changes states from "off" to "on".

Although cases of moderate interference can sometimes be cured by using a "brute-force" type AC-line filter and/or a common-mode choke (see the ARRL Book, Radio Frequency Interference -- How to Find It and Fix It for more information about AC-line filters and common-mode chokes) most cases will require internal modification to the lamp. For a number of different reasons (you may be blamed if anything EVER goes wrong with the lamp or house wiring) you do not want to perform this modification on equipment that is not your own. Remember -- house AC power is dangerous. These modifications must only be performed by qualified service personnel!

Here are some reprints from QST "Hints and Kinks":

RFI and Touch-Controlled Lamps.
I have found a simple cure for those touch-controlled lamps that turn themselves on and off during nearby radio transmissions. In my case, 40-meter operation gave the most trouble, with 75-meter operation a close second. Higher frequencies presented no problem. (I use a ground-mounted vertical antenna for 80, 40 and 15 meters, and the lamp is approximately 150 feet from the antenna. An AC-line filter at the lamp did not eliminate the problem.)

A 1k ohm resistor (in series with the signal input lead to the encapsulated circuit that operates the lamp) cured the problem for me. I suppose the required resistor value would vary with the RF-field intensity and frequency.
-- John M. Adams, W7OTC, Sun City, CA

More on RFI to Touch-Controlled Lamps.
I had the same problems as W7OTC with a touch-controlled lamp switched on and off by my transmissions (100 W to a roof-mounted vertical, with two

radials per band). The problem occurred during operation on the 80- through 15-m bands, but 10-m operation had no effect. A 1-k ohm resistor was not a complete cure in my case.

A 3.3k ohm resistor in series with the signal input on the lamp helped on all bands except 80m (an additional 1.8k ohm prevented the lamp from functioning). When the resistor was replaced with an RF choke (100 uH, 139 mA), the problem abated on all bands except for 80 m. On 80 m, the interfering signal was considerably attenuated by the choke, but the lamp still switched. The choke alone may be enough to clear up the problem in some cases.

The final answer turned out to be both the RF choke and a 1.8k ohm resistor in series with the signal-input lead to the touch-control circuit.
-- Colin Hall, G4JPZ/W6, Marina Del Rey, CA

Touch-Lamp Transceiver.
When my wife told me she had bought a three-way lamp that switched on and off at the touch of any of its metallic parts, I did not realize she had purchased a transceiver. I found that my transmitted signal would cause the lamp to operate exactly as if I had touched its metal parts. Later I discovered a raspy, S8 signal at 1875 kHz -- it was coming from the lamp, which was located three rooms away on a different AC circuit. The lamp signal is present from 40 meters down. At frequencies from 20 meters up, my operation is undisturbed.

A box inside the lamp contains a circuit board through which AC line voltage is routed and which has a wire connected to the metal base of the lamp. When the lamp is plugged in, the lamp signal is present at all times, regardless of whether the lamp is on or off. In my attempts to eliminate the interference, I tried a commercial AC filter, coiling the lamp cord on some ferrite material and other such approaches without success.

To make sure the lamp my wife had was not defective, I borrowed a similar lamp from a neighbor to try it. I found it to perform in exactly the same manner except that the frequency of oscillation was somewhat different. There is no manufacturer or distributor name on the lamp or packing container. The lamp was made in Taiwan.

I am writing so that others who may be experiencing similar difficulties may have some idea of the probable source of interference. After I described what I discovered to a ham friend, he realized that such a unit had been causing interference to his station for more than a month.
-- Cal Enix, W8EN, 209 S Kalamazoo St, White Pigeon, MI 49099

If these cures don't work, it may be possible to shield the electronic switch module, but this must be done safely! You may also want to contact the manufacturer and send a report of your problem to ARRL Headquarters RFI Desk, 225 Main St. Newington CT 06111.

DIMMERS

Light-dimmer Interference Reduction.
Radio Amateurs who've have been cursed with RFI from solid-state light dimmers will be interested to know that at least one domestic manufacturer - Lutron - produces light dimmers that incorporate RFI suppression techniques. The Lutron NOVA series uses toroidal chokes that provide a significant level of RFI suppression.

I bought a Lutron model N-600, which will handle up to 600 watts of incandescent lighting. Temporarily installed in my radio shack, a generic light dimmer produced an S9+ reading at 230 kHz (an arbitrary noisy frequency). The N-600 produced a reading of S3, a difference of about 40 dB. Admittedly, this is not zero, but installing the N-600 some distance away provided a reduction in RFI that is very gratifying. Indeed, I new hear new noise sources, heretofore undetectable through the dimmer din.

You're not likely to find these dimmers at your local discount store, and they are not inexpensive. Check for the availability of these dimmers at a lighting fixture store and expect to pay about $25 apiece for them.
-- Richard G. Brunner, AA1P, 10 Brookside Dr., Foxboro, MA 02035

If you come up with a better solution for these problem, please write to the RFI Desk with the solution. It sounds like it would be a good candidate for Hints and Kinks!

One thing about mercury vapor rectifiers - if you have had the rig on its side or upside down, run the filament power for at least 5 minutes before turning on the high voltage to make sure all the mercury is vaporized. Unvaporized mercury in the tube can cause bad things to happen.

My old Valiant II had fuses in both power leads, and occasionally a flashover in the 866 mercury vapor tubes would blow both of them. If you fuse the power lines, (but not the safety ground!), that may help protect your transformer.

>The stuff is good but the prices for their used equipment is very high.
>Go to a hamfest and save money.

Of course you may end up spending more money at a hamfest because the
equipment may not be as advertised and your ability to return it may
be...uhh...compromised. :)

In return for AES's higher prices you get equipment that has been checked
out on their bench, fairly represented and a 30-day return policy if you're
really unhappy. All this from a company with a decent reputation that they
would like to retain.

Yes, their prices are higher than the usual backlot hamfest, but they do
add value to the equipment.

What I ment to say was that unvaporized mercury on the FILAMENT of the tube can cause problems when the high voltage is applied. I think it damages the emissive coating on the filament. That's why extra warm up time is required when the tube has been tipped over.

I have a portable Antenna Analyzer for sale.
It is a portable unit run from NiCad batteries with charger. It uses a LCD 4 digit frequency counter, an analogue SWR / %reflected power scales read direct.
No radio Transmitter needed. It sees exactly what the radio sees.
Only R2495-00. New, under guarantee.
Ideal for the antenna experimenter.

You need a TTL to RS232 level converter chip. They are available from
either Mouser or DigiKey. They come with a suggested hookup or it is
available and they run on 5v usually (I dont have the book in front of
me).

> The anti-gun control groups have a snappy slogan that basically says,
"guns don't cause crime any more than flys cause garbage". Without
debating the validity of that particular statement, I think that it's
unfair to blame lawyers for the state of our society. I'm not suggesting
that I agree with the strange things that go on in the "legal system"
(anyone collecting oxymorons??).
On the positive side of this topic, you might note that the Feds have now
decreed that aircraft manufacturers will only be liable for 18 years
after their product has been sold instead of eternity. Common sense does
prevail eventually.
Another point to consider is that many of these unbelievable judgements
have been rendered by juries!! Has the point been reached where we can
no longer trust the juries??
Our society has serious problems and sleazy lawyers are a symptom, not
the problem itself.
Honest, hardworking lawyers do exist and are a valuable commodity when
someone decides to rain on your parade. And yes, they're not
necessarily cheap, but most will try to keep costs down when they know
you're not well-off.

Hey! Clever tag line there Timmy Z!

There is another AZ-EL rotor made by E-Moto. looks much more powerful
and is more expensive than the 5400B. I bought mine used for $425. I
have seen them as low as $350. There is also an elevation only model
that you can use with an existing AZ rotor. The 5400B has an optional
RS232 module that can interface directly. Otherwise, a DIN plug on back
brings out analog voltage cooresponding to position and accepts external
relay closures to run motors. The 5400B is probably your best bet unless
you wish to home brew, that way you can buy some more F.Z CD's with the
money saved and listen to them while soldering your little poots away!

This is a well-known problem that I cured in my HW-100. I found the solution in the 1970s editions of either QST: Hints and Kinks or Ham Radio: Ham notebook. If I find it I'll mail you about it. I think I added a diode and a resistor to ground floating screen grids.

3895. Yaesu 890 dead receiver problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-02 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <3150.849485588@safety.ics.uci.edu>
Source record: 189570

I have a Yaesu FT 890 that I use on occasion in very easy service.
I have had it sitting for a few months with no use. I then tried it
and get no audio, no S meter deflection on 40 meters early evening
with a good dipole. Yuck, its dead.

I noticed that if I switch the mode to FM I can hear some very
low AF coming out from signals in the background, but all other modes
give me absolutely no sound. Squelch control is not the problem.
Oh, the RF gain control does move the S meter as it normally
would. I just can't get any signals to it otherwise.

I do not have the equipment here to see if it transmits normally.
Will try that later this week when I take it to my home shack.

I will take it right to Yaesu service when I get it home. However,
I just thought I would look for suggestions and maybe similar
experiences out there. Anyone have any ideas?

Also remember that Alinco like all other Amateur manufacturers are a wholesale company. Here they consider the customer the dealer. Many times they want to encourage the retail customer to place orders through the dealer level this gets the retail contacts back to the dealer level where they belong. Doing business this way keeps the company out of the direct retail market as they likely do not have enough personell to correctly handle direct market contacts.

Turn off the radio
Press and hold the Function, Scan and Dup buttons while turning on the radio,
continue to hold for 5 seconds before you release them.
Now the radio will receive 136 to 174 MHz.

I have for sale a real nice Drake TR-4 Transceiver, 300 W. PEP, 80-10M. It has the AC-4 Power Supply & the matching MS-4 Speaker. These units are in excellent
condition with a high 31,000 serial no. It also has low hours on it. Asking $350. Thanks....

Hello,

I have an FT-530. For some reason (can't remember why) I screwed up the solder pad jumper settings, and I cannot remember what they were (happened a few months back) I would appreciate it if someone could pop the top on their rig and let me know what the proper settings are, so I could return my rig back to normal use.

thanks

I just bought a truckload of Cellular Amps from a local scrapyard..They have been kept dry..Being a typical Ham, I couldn't stand to see them put in the Crusher...
Here's a description of what I have: 25 units all same style, different MFG. they are 10 lbs apiece, major heat sink fins, size is 3.5" x 5.25" x 12 long. In/output connections within DB-17 shell connector, they require 24VDC..
I think these units are a great basis for rebuild to 900 MHZ ..I just need to find the Right person or group...

Here's a parts breakdown and MFG..
7 units Mfg by Autoplex (AT&T) Model J41650FB-1L1, somoma scientific CX8AI, Transistors: Acrian 46076-80456

2 units Mfg by Autoplex (AT&T) Model J41650FB-2L2, OMC UD8690-T, tranistors: 2/MRF-891, 2/PH BLV59 H 8931

6 Units by Western Electric, model 22090, tranistors 2/SDI-496, 2/Acrian 39017-0154a

5 units by APX, Model 100, 2/TKD-CU49, 2/TKD-CU421, 1/HD-0900M3-HR5, Transistors: NEC 2SC3538

7 units by Decibel products, model DBPO45D01B-G, Ocean microwave UD-8690-TH-1, MHW812A3, Tranistors MRF898

I also bought lots of 4 channel combiners by Nothern Telecom, Power loads? Celwave BC-900-AA, RCL 3way power dividers, Meca 4way couplers, a few 800 rec preamps: model Trontech KS21583-L2

I need to move this equipment out!! I really don't need it, I'm a VHF/UHF guy and not interested in 900 Mhz stuff....But I couldn't pass it up!!!

Prices: 1 amp shipped to your door UPS/COD: $35.00, Take 2 for $50.00...Better deal? 4 for $100.00!! and I will throw in some of the combiners in...On the 2 4 channel compiners (looks like a duplexer) Make offer...Heavy!
I will trade for any kind Motorola equipment, even Mt-500's or HT-90's..No P-200/P-220 or trunkmounts please....

You can get it new from RS for $79 at most hamfests. Just ask, their price protection policy kicks in. I've had mine for four months and haven't had any problems. I even get a boost of one to two S-units compared to not having it inline. This is the same amp (I believe) that RS used to sell but put out 45 watts. If I can figure out which is the "Top" of the schematic, I may find the resistor supplying voltage to the final and replace it with a smaller one to increase the output power. Anybody good at this?

If you wish to run the risk, yes, the radio can be modified. It will then be in violation of the FCC type approval. Here in Australia the IC-R8500 covers its spectrum without a break, as do all the Icom HTs and mobiles.

That is what I thought and could not believe it. The unit is worth
aroung $3,300.00 and although it is a nice receiver it has one problem
in it that you should know about. It picks up its own computer all over
the place and it is not picking it up internally but externally through
the antenna lead in wire especially if it is not shielded. Even with
high quality shielded cable it still does it. Also the speaker wire
wire should be shielded as well. I had one and I got rid of it because
of the problem. In marine use I guess it was not considered a problem
which is what the radio was intended for.

I asked the original question, Dick. I tend to go along with your
idea. I think a somewhat higher price is worth it to have a piece of
gear that has been checked out. The 30 day return policy is nice too.
I know a few people who have been badly burned trying to "save money"
at hamfests. Unfortunately, honor and integrity have gone out the
window these days. You can't always trust your fellow Ham. Sad but
true.

> What do you think of the DX70? Use it in the car? Easy ergonomics?
> Walt

A fantastic rig for HF mobile/portable. I also own an IC706 and
a Yaesu FT890 too. The FT890 is the best of the lot on a fixed
antenna, but you can't beat the Alinco's solid performance on
SSB and CW, the good ergonomics, and the price. Performance is good
on a fixed antenna...but not as good as the FT890.

I am disappointed in the Icom 706 because, while covering 2M and 6M,
it does not perform very well on HF (qsk is bad, overloads easily,
runs very hot, noisy fan, etc). It is a good choice if you have
room to mount only 1 radio though.

Want more info? Feel free to email me.

Let's settle this one for once and for all. The Simtel collection is
available all over the place and should be very well know:

"Simtel.Net : List of authorized FTP mirror sites

Simtel.Net, located at Walnut Creek CDROM, is the origin point of
Keith Petersen's world-wide distribution network for Shareware,
Freeware, and Public Domain programs for MS-DOS, Windows 3.x, and
Windows 95. It has more mirror sites than any other archive on the
Internet. Its web pages are also mirrored on many servers around the
world.

FTP.Simtel.Net is the name of the primary distribution site for these
collections. It is actually several ftp sites arranged in a rotating
pattern of IP addresses to help balance the load and to avoid access
problems due to network outages and simultaneous user limits. At the
present time ftp.ou.edu and oak.oakland.edu are the primary sites. Our
files are located in the /pub/simtelnet directory tree on these hosts.

The following sites are authorized mirrors of Simtel.Net as of the
revision date at the end of this document. This list will be
frequently updated as new sites are added.

does anyone know about these radios and how to fix them??????

I bought it used from a (C)hicken (B)ander and have some problems with
it..

Main one being it has that STUPID band in it
my side band doesn`t sound right.. off frequencie?????
has a DUMB echo in it.. want it yanked
and want a basic checkup done to it.

if it costs over $150 I`ll just buy a new one.

My TS850 display sometimes takes a 5 or so seconds to light up when you turn it on and also some of the characters darken from the bottom of the character up somewhat after it's been on a few hours. It's still very readable...just annoyning.
Is there any fix for this? Replacement of the display unit only? Is it expensive?

Thanks, Chuck, KE9UW

3923. DX-70T

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-03 00:00:00 UTC

Message-ID: <32A46209.23F6@tamu.edu>
Source record: 189471

DX-70T owners- have you had this problem?

After purchasing a new DX-70T, I needed to prepare it for use with
an amplifier. The manual says to remove the botton cover and clip
a jumper to enable a relay that keys the linear. After doing this
and replacing the cover, I found out that there was no rf out of the
exciter. Upon examination, I found that the cover contacted a ground
tab attached to a small "IF can" type of transformer on the other
side of the radio (top) on the Main Board. The bottom cover had bent
the transformer up away from the pcb resulting in no rf out. There
was no way to see that this would happen in advance, and no warning
to this effect is in the manual.
Has anyone else had this problem with this particular radio? It
sure was a nice radio till this happened. It goes back to AES
today, after only two days of use.

I am having the same problem. When I turn on xcvr, the display will have
dots for a number of seconds. Then I wull get cw UL a few times.
Eventually, I will get some static noise and following that it will work
ok. I did a "reset" and it seemed to work slightly better for a little
while, but still not fixed. Can anyone provide more more detail on how
to fix the problem?

I too once needed a lawyer, and he came thru for me. I think the problem
is the
bottom half of the class. This lower 50% has contemp for the law, and
they are
who the lawyer joke are for. Basically, it is the Judges who have my
contemp, but
then they are lawyers also. And if you say, "What about the judge in my
case, where
I won", I will just say, at one point, the Judge fell asleep, and I won
in spite of him, mainly because of the strength of my lawyer.

You are, to some degree, correct.

The proliferation of lawsuits really isn't the fault of the Trial
Lawyers Association. In a sense, they are merely providing a service
to accomodate a demand for legal services in our country.

It is the desire to "get rich quick" (and sueing someone seems to
be a way of doing that with little to no risk if you can get a
lawyer to take your case on a percentage basis, which most will)
that the American people have today [inherently lazy bastards
they are -- the Japanese were right -- they want to lay around
with the good life, no work, have everything paid for them by
someone else -- basically an extension of the welfare-state
mentality that permeates this country today].

3929. Icom W21AT Handheld Chronic Keypad Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-03 00:00:00 UTC
From: kirk@neptune.gsfc.nasa.gov
Message-ID: <581t0t$1ma@post.gsfc.nasa.gov>
Source record: 189477

My Icom W21AT handheld has been having a chronic problem with its keypad going bad. The symptom is always the same: the lower row of keys start to lose sensitivity to touch and have to be hit two or three times before they take effect, and then gradually fail completely. This is the *third* time it's happened in its three years of life. I had it fixed, the first time under warranty and the second for $$, at yearly intervals by Icom in Bellevue. Now, after the usual one year, it's done it again.

Is this fault common with that particular Icom model?

Do I just have a lemon?

The W21AT is a nice dual band radio which I'd like to keep, but it doesn't look cost effective to have to replace the keypad yearly. Icom's repair techs are competent, I'm sure, so can't attribute the failure to bad repair, twice. The RF performance is excellent, so unless there's an apparant solution, I'll just have to use it as a single freq repeater or packet radio, and never touch the keypad.

Guess I don't need all those bells & whistles anyhow. But it would be nice to be able to switch bands(the band button is on the bottom row, of course).

Source record: 189483

I purchased an ALinco DR605T in June and by August the UHF receiver was heading south. The problem was very intermitent and it seemed to be caused when the radio reached elevated temps. I sent the radio to Alinco and it was repaired under warranty. It is now working fine, just wondering if anyone else has had that problem. Other than that it has been a fine radio, very easy to operate. Unlike many hams who have some of the Icom radios, I knew all of my functions within the two nights.

Glad to hear Standard's reputation has been restored...back in the
early '70's, their SR806M, SR826M and SR146 2-M radios all suffered
from *severe* intermod problems...virtually unusable in radio "pop-
ulated" areas. Oh, well, at least one could repair the radios of that
era. Nowadays you need a microscope, surface-mount workstation and
a copy of the uP's source code.

3940. Alico 570T mic problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-03 00:00:00 UTC
From: "P.W.Smietan" <paulsm@microsoft.com>
Message-ID: <01bbe168$812737a0$6c17369d@paulsm>
Source record: 189488

Seems like a lot of other people out there have the same 2m/440cm rig that I do. My mic works fine with the exception that I can't key in a freq on the keypad. Am I missing something? I presume there aren't any settings on the radio to dis/enable the keypad.

If this is a hardware problem, who can I go to at Alinco for repair? Any good references?

Thanks es 73,

Paul, KN6PH

Gang: need help!
I have an Icom IC-2AT which transmits OK on
simplex, but drops off (keying light comes on, and immediately goes
off) on duplex. I suspect an offset adj is out of adj (?).
Before I put my dangling digits into this beast, and screw it up,
does anyone have a suggestion? I do not have a maual or schematic, so
if anyone can offer at least a copy, I will be most grateful to pay for
it.

Hi All,

We're still looking for a solid state Grid Dip Meter (preferably the
Millen Solid State version). Delivery is to Israel.
Can anyone help?

(PS: When responding, please email directly in addition to posting
here, so that no responses are missed).

best regards,

I purchased an Alinco DR-605T just about the same time. I mounted it in
my mobile since I purchased it in early July and is still currently
there. It has performed so well, that I just purchased another one in
mid November for my base. Don't be concerned about the problem you had,
it was just one of those unexplained happenings. I agree with you it is
a very easy rig to operate.

Gerald,
I failed to mention that it is going back for repair, and at my
expense if necessary. If you saw how the ground tab was installed
in this particular radio, you might think differently. I would like
to know if all DX-70s have this tab installed the same way, because
it is almost impossible to see that replacing the bottom cover is
going to damage anything. I had no reason to remove the top.
Just for reference, how is that tab in your radio? This transformer
is on the main board (top) near the side of the radio. I am sure that
few of these radios went out like this, and in this case, I do feel
that Alinco should make it good- but it will be up to them to decide.
I also told Alinco that I was aware that I did the damage myself, and
would pay the price if that was their decision (I ended up sending it
to them instead of AES).
I also wanted to let every DX-70 owner know to watch for this
potential problem, so that they could avoid making the same mistake.

Well finally heard from DF Systems, it seems that not answering mail nor bothering with orders for weeks at a time is the way that DF Systems normally does things.

I was informed by the owner that he doesn't own a watch, nor a calendar, and that he answers his mail when he checks it, and that DF Systems was a hobby with him.

This is all well and good, I only wished that he had let me know this when I logged on his Web site, I wouldn't have wasted my time with his outfit if he had..

Sir,

Got one of these in the car--love it, actually. Great for NOAA weather
reports, local police scanning activity, and all the normal 2m/440 MHz stuff.

Anyway, about your question:

There are step/step down pushbuttons on the top of the mic, but the keypad is
for DTMF tones only. You have to use the MHz up/down button and the VFO on the
front panel of the rig to change frequency.

Actually, I'm always hitting the DTMF tone buttons by accident, not to mention
the up/down buttons, and wish there WERE a way to lock out the buttons on the
mic. How's that?

Bob, you're right. BUT, why on earth Yeasu doesn't release some FT-50x WITH two receivers (&repeater, &more, &more..) ?? I'd buy it. Their FT-51 is just a bad joke on the theme of full-dual HTs... (please don't lapidate me, FT-51 fans :). Is that so hard to stuff in a couple of VCOs?

> rear of the car.

It sounds like you have done most of the things that I would
suggest already. I do have a couple of other questions/ideas.
1. What happens when you take off the antenna? Does the noise
almost go away? If not then I would suggest filtering the
power cable.
2. Is the power cable for the radio going directly to the battery
terminals? It should be.
3. You could try building a copper box for the ignition module,
and using toroid filters or .001 uf bypass caps on the low
voltage line.
4. You might make sure that your spark plugs are resistor type.
I have never used the Magnecore wires, I just slip heavy copper
tubular braid over the wires and bond it to the block.
5. Does your noise get louder when you accelerate? All ignition
noise that I have seen does this.
6. I have never had to do this, but have you tried a transistor
AM battery radio with headphones as a noise sniffer, to try to
locate the source?

After all that you have done, it is hard to believe that you
still have S9 plus ignition noise. Are you sure that it is
ignition noise? Does it pop at idle? Or is it a hash sound?
Fuel pumps, as you probably know, are a common noise source,
as are fans and other motors.

Good luck and good hunting!

It sounds like you have done most of the things that I would
suggest already. I do have a couple of other questions/ideas.
1. What happens when you take off the antenna? Does the noise
almost go away? If not then I would suggest filtering the
power cable.
2. Is the power cable for the radio going directly to the battery
terminals? It should be.
3. You could try building a copper box for the ignition module,
and using toroid filters or .001 uf bypass caps on the low
voltage line.
4. You might make sure that your spark plugs are resistor type.
I have never used the Magnecore wires, I just slip heavy copper
tubular braid over the wires and bond it to the block.
5. Does your noise get louder when you accelerate? All ignition
noise that I have seen does this.
6. I have never had to do this, but have you tried a transistor
AM battery radio with headphones as a noise sniffer, to try to
locate the source?

After all that you have done, it is hard to believe that you
still have S9 plus ignition noise. Are you sure that it is
ignition noise? Does it pop at idle? Or is it a hash sound?
Fuel pumps, as you probably know, are a common noise source,
as are fans and other motors.

Good luck and good hunting!

3969. 2 M amp help

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-04 00:00:00 UTC
From: bds3@juno.com
Message-ID: <584t0g$15o@quasar.dimensional.com>
Source record: 189295

Hi,
I am having a problem with a rfc 2-23 amp that i
would welcome some input on.
I am using it with a kenwood th-22at and a mfj 2 meter
hansheld SWR meter and a ringo ranger 2m antenna.
The SWR at full power between the ht and the antenna
is about 1.5. When the amp is hooked up to
the radio the swr is slightly higher but still below
2. But when I turn the amp on the reading goes off scale.
I was wondering if anyone could tell me want is going
on here and if this is a valid reading and how to correct it.

Thanks

Tim ...

What I used at my QTH was 2 Alliance antenna rotors, which I got from individuals for FREE. These rotors are the ones where the pipe can go entirely through the rotating cuff. I mounted one vertically with an "L" shaped pipe in it, and mounted the other, mounted horizontally on the horizontal section of the "L", with a pipe exending horizontally through it to mount my antennae on. I calibrated the horizontal rotors scale in degrees elevation. The whole thing was mounted on a 6' tripod I constructed of pipe from a junk yard. Total cost for me was about $10 and I've been using it for 14 years.

Hello all,

I recently paid $1300 for a TS450Sat, brand new from HRO. I
like mine, and prefer to own a new radio. I've been seeing alot of
them lately that have not been owned long enough to even be called
"used" for $850-$1000. Does anyone have any ideas why the radios
are for sale so soon after purchase, and what (if anything) the
original purchasers are doing in the way of a replacement for HF?

Thanks es 73's

Hold down the lock button while you power it up and it will remove the A
from all lock. The you can use the function/lock combo to remove the
lock or reset it, your choice...

Source record: 189301

First of all, I just want to say THANKS to everybody who replied... there were so many of you I just decided to post a new message.

There were a couple issues that just about everybody brought up. The first one was about the antenna. I am pretty much stuck with a vertical because of space restrictions. Out lot isn't that big at all and there are electric and cable lines running from the house to the pole that could really cause possible danger if I was to string a dipole up.

And also everybody told me to look at used. I know I don't want to buy from an individual. The local shop has used HF rigs starting at about $600 or so. But since there is a $100 coupon on the 840 and I _think_ it is being discontinued, so it is pretty cheap. I have found it as low as $739 delivered (from Texas Towers I think.)

I bought two used HT's (FT-470 and IC-W2A) from the shop and ended up getting rid of both of them... then I picked up a new FT-530 for about $300 right when they were going out... and I love it to death.

Well, I'm off to listen to GORDO dit and dah endlessly....

Thanks

I personally think that the best thing we could do was to give congress,
(etc.) 5 years to re-touch all of the laws to make them understandable
by the average product of our school system. It would be their choice as
to modifying the laws or improving the education system! ;o)

If it has been so poorly written that only a lawyer can read it, and two
lawyers come to different opinions of what it means, then it should not
be binding! (Think what that would do the the tax structure).

You might want to try runing RG-8 from your battery to the radio.
The ground side shields RF and the center conductor brings in the
12 Volts to operate the rig. Sometimes its hard getting through the
fire wall, but worth it. Maybe run outside your car first to see if
it works. This method has solved my problems in the past.

I heard the same thing. I would guess the "a" means they have fixed the
"bugs" in the original 706. Sort of like the Icom 751 then the 751A.
I am not sure it has any additional features. I will ask my contacts at
Icom about this. Do Not ask Gary Farber(Icom USA). He automatically will
deny this so as to keep the current model selling.

Try Marlin P Jones Assoc. for the switchers. He has a lot of surplus stuff,
cheap, including big 5V 35A Lambda switchers that you can series wire for 13.6V.
Crank down the output on each to 4.5V or so. $14.95 ea.
Also has 9-18V in +/- 12V out @1A DC/DC converters that make a real nice
inverter to series regulate down to -19V to run surplus PLL bricks for
portable microwave transverters. $9.95 each.
Call for his catalog anyway - it's pretty good. 561-848-8236

Source record: 189313

********** PANORAMIC DISPLAY FOR YAESU FT-1000 **********

Hello all, Just spoke to Jerry Vogt from "Hamtronics, Inc". He said
that if
they get 40-50 committed customers they will design a "black box" that
would
connect between the Yaesu FT-1000 and a Kenwood Scope (SM220 w/BS8 or
SM230),
for PANORAMIC DISPLAY use!

The FT-1000 comes with the IF OUT jack, and even refers hooking a
bandscope to
it in the manual, but they never made one. The Kenwood scopes work
excellent
and are readily available new and used. The IF's (8.83 MHz) don't
match, however.

A circuit is needed to downconvert the FT-1000's 73.62 MHz I.F. to
Kenwood's 8.83 MHz I.F. HAMTRONICS will provide the necessary mixer
and Xtal controlled oscillator (all in one small shielded box) to do
the work! This IS rather specific, but it will obviously work with
any other 73.62 IF. Not sure what the other Yaesu's or the MP has.

**** Please respond either to me (news, and email), or to Jerry Vogt
at the Hamtronics site: http://www.hamtronics.com/hamxHome.html
Just a brief, "Count me in, I want one!!" type of message will do.
If the count is high enough, we're in! They'll make em' Tell your
friends!!
It's too early to know the price, but their similar converters are
very affordable. Thank you all!! -- Richard Valentine, N1SQJ

I went from Tech to Extra this year. My primary means of preparing myself for the code test was a computer program. I happen to use a Mac computer but many good programs are available as shareware for all the popular computers.

I liked the computer because I could adjust the speed and tempo sperately. Using a cassette tape you are locked in to the way it is recorded.

The program I used also allowed me to construct text to be sent or to send random text.

I am having a ball now working CW.

Good luck,

73,

Rik

: I just got one And I love it. For a price of $100 less than the nearest reasonably
: featured dual band, I will deal without full duplex. As per your question, as far as I
: can tell, there seems to be only one tx/rx path to the antenna port past the
: bandswitching on the schematic.

It seems that "dual band HT's" fall into two main catagories:
1) Two independent receivers
(these usually cost more)
2) One receiver
(these tend to not have full duplex)

At the price and size of the FT 50, I find it very impressive technically
even without full duplex.

Hello and thanks for reading this..

Does anyone know if DF Systems is still in businness??

I went to their Web Site and placed and order over a week ago for their Handy Finder Kit. As of today, No kit and nothing heard from DF Systems period.

I have left them two pieces of mail and haven't heard a thing from them.

I am curious if they are still in business or if this is simply the way they normally handle their business affairs??

Thanks
Don

I will be getting my General soon, and I am trying to figure out what kind of equipment to buy. I have my sights set on a Yaesu Ft-840 and a Butternut HF6VX, but I don't know much about antenna tuners. The priority is cost, but I've read that I should at least get one with a SWR meter. What kind should I look at? MFJ?

And what about the FM option? Will I really want this?

Also I have a power supply for my HT that puts out a constant 5 amps and 7 amp surge. Is this too weak for the 840?

One more thing - If there are any other Rigs or Antennas in the same price range that I should consider, please let me know.

Thanks in advance!

>Walt

Walt,

I have one in my truck. The ergonomics are easy and can be done by feel
in the dark. The receiver is rather hot and thus is noisy but has four
RF level settings. The noise blanker is pretty worthless but in a
mobile application an effective NB is a real challenge. I like the 2
ports for HF/6 meters. On the minus side the remote kit is cumbersome.
I would not recomend removing the cables except as needed for service.
The multi conductor cable plugs directly into boards in the radio and
head. I work with ths type of equipment every day and I'm not
comfortable removing it.

Hope this helps Jerry

I warned my wife not to ever buy any touch lamps, and what did she do? She bought two of them, one is in our room, and one in my daughters room. I have to unplug the lamps when I want to operate. We bought a waterbed heater once which completely tore up my reception, we had to get rid of it and get one of the old fashioned king. My suggestion is to accidently lose the lamps one day!

4006. Help: Buick Ignition Interference on HF

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-04 00:00:00 UTC
From: wb4lnm@aol.com
Message-ID: <19961204114500.GAA28669@ladder01.news.aol.com>
Source record: 189514

I have a '95 Buick LeSabre with the 3.8 liter V-6 engine and the "waste spark" ignition system (GM's term). I am experiencing extremely bad ignition interference on HF: on 40m it is S9+10dB on the Yaesu FT-747GX.

I have bonded: the hood in two places to the body; the radio to the chassis; the tailpipe to the chassis. Based on some earlier responses here praising their positive effect, I have replaced the OEM resistive spark plug wires with units from Magnecor without any helpful effect. I have attempted 3 different types of coax, thinking I might have a bad connector or poor braid coverage. No luck. The antenna is mounted on the rear of the car.

Does anyone have a GM car with this engine that has been successful in reducing the level of spark emissions from it? I am working now directly with Delco, but they are stumped at the moment as well. Please respond here and/or
to : WB4LNM@aol.com

Thanks in advance for your assistance. 73 John...

> Thanks much for a little hope... :)
>

The big advantage of the single receiver for me is the improved battery life. I had an FT-530 before the FT-50 and it ate batteries. Sure, I could turn the other band off, but then what's the sense of carrying it around? To me it is like an HF radio...I don't use 20 and 40 meters at the same time, but I like having them both in the same radio! I would like to see manufacturers move the direction of offering multi-band mobile and portable VHF/UHF radios that were simple to operate and didn't have all the gee-whiz features that burn up batteries and make me carry the operator's manual with it.

4015. FS: Complete BIRD Test Set w/wattmeter and more!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-04 00:00:00 UTC
From: sidener@saucer.cc.umr.edu
Message-ID: <58408j$10n@hptemp1.cc.umr.edu>
Source record: 189523

Hi, I have a great deal on a complete BIRD test set:

This is everything you need in one small package. All BIRD and
used but in good shape.

It contains the following:

1 Hard Black Plastic Carrying Case

1 100W continuous dry dummy load with male N-Connector model 8164

1 Variable RF signal sampler model 4275-020 1000W max 20-1000 MHz
with one male and one female N-connector. This unit is perfect for
pulling off a signal for your scope, spectrum analyzer, etc. from a high
power source (such as 100W for example) without blowing up your equipment.

1 2' Female N to Male N double shielded cable for connecting the dummy
load to your meter or radio.

1 4410A BIRD Wattmeter (see below for description)

4 Slugs for the 4410A covering 0.1W to 1000W and from 2 MHz to 512 MHz.

The 4410A is the meter that looks exactly like a Bird 43 but has a range
switch with seven positions. It uses special slugs which are the equivalent of
seven standard Bird slugs. These slugs look just like standard slugs but
have different model numbers.

The meter has N-Connectors

The meter is used but in good condition

The slugs are as follows:

Each number in below represents the full scale range, and each slug has 7
full scale ranges.

4410-3 2-30MHz (1, 3, 10, 30, 100, 300, 1000 Watts)
4410-5 25-80MHz (1, 3, 10, 30, 100, 300, 1000 Watts)
4410-6 50-200MHz (1, 3, 10, 30, 100, 300, 1000 Watts)
4410-7 144-520MHz (1, 3, 10, 30, 100, 300, 1000 Watts)

(equivalent of 28 standard bird slugs!!!)

I am asking $450 each for the whole set plus shipping.

I can substitute the 1000W HF slug for a new in-used 10kW HF slug for an
extra $25 The minimum readable value is 1 Watt instead of 0.1 Watt.

Thanks,

Scott Sidener N0WFL
sidener@umr.edu

I hav a 1995 Nissan Maxima
a TS50, AT50 and Outbacker (6 ft)

After the 30K Transmission inspection etc.... I found myself with a
very high (S3) level of broad band noise on 40 meters (not 80 or 20)
A sniffer loop indicates the noise is coming from around the
transmission housing

Anyone know what could cause this?
How to eliminate it - It wasn't there before...

Also - I notice my ignition noise comes and goes.

The tailpipe has been grounded by 1 inch braid to the bumper and tied
to the chassis
Any suggestions in this are are also appreciated

4019. Help - need manual for WX station!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-04 00:00:00 UTC
From: perryrt@flinthills.com
Message-ID: <5846qt$8u1@news.flinthills.com>
Source record: 189527

I'm looking for a manual for something I picked up at a hamfest a while ago.

Specifically: it's a weather station called a Digitar Model TWR-3. According to the back, it's made by Magnaphase Industries, in Auburn,WA, and lists a phone #. Calling that number gets you a very confused young lady who knows nothing about a company named that. Internet searches (AltaVista, Yahoo, and Lycos) have turned up only 4 references, all in a list of WX machine companies (yup... it's the same number), and the yellow pages for the 206 area do not list any company by that name.

1) Anything I've missed/suggestions for further search?

2) Anybody got one of these things w/manual? I'd be willing to pay postage and copying costs for it...

3) Think any of the "olde-time manual" services for the ham community might have something?

Thanks a lot in advance, all...

Source record: 189230

```
--------------------------------------------------------------------------------
General Coverage Mod for YAESU FT-747GX
--------------------------------------------------------------------------------

1) Remove top cover.

2) On backside of display unit, there is a brown jumper
wire near the large ribbon cable.

3) Cut the brown jumper wire.

4) Turn the radio on and set the frequency to 12,345.6 KHz,
then turn the radio off, then on again.

5) This enables the general coverage mode and a GEN display
will come on and stay on at the top of the LCD display.

6) Reassemble the unit. It will now transmit everywhere it
receives, however, Yaesu recommmends that it only transmit
between 1.8 - 30 MHz.

Disclaimer: I'm passing this on from someone who owns one of these and
has done the mod. I have not done or tested this mod. You do it
at your own risk.

4027. Good Alinco service

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-05 00:00:00 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1996Dec5.193812@kuhub.cc.ukans.edu>
Source record: 189235

After the previous thread of messages about Alinco, I dropped a message to the Alinco Web site. They have a web page which allows one to leave comments to Alinco service.

I have had occasional problems with my Alinco DR-570's microphone, but only when the car was very hot (and it does get hot during a Kansas summer!) In response to a previous posting about microphone problems on the DR 570 units, Alinco said that they can repair microphones if one has problems, and they have other options to help customers. Scott Booth, the Alinco service representative was very polite and helpful in the response he gave.

I have had only good luck with Alinco service when my DR 570 required service shortly after purchase. The CPU/display died, and Alinco fixed the problem promptly and I've never had any problems since. One could hardly argue with such good results.

The DR 570 is a good radio, and I would not hesitate to recommend Alinco to anyone looking for ham gear.

4028. Collins S-Line for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-05 00:00:00 UTC
From: "Joseph G. Hill" <joehill@bellsouth.net>
Message-ID: <32A79BCC.3D1B@bellsouth.net>
Source record: 189236
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Collins S-Line for sale. Wing emblem 75S3B, 32S3, 516F2, and 312B4. I bought from original owner who as I am non-smoker. Very nice condition especially the 75S3 and 32S3 which are really excellent with hardly a blemish on them. Work 100% as they were very well maintained and have all manuals and cabling. $1,000 plus shipping.

73,
Joe

I wish I had been so lucky. I've ordered lots of stuff from AES (all new)
over the past 5 or 6 years and can generally say I have had good luck--
until this past week.

I ordered a Mirage C2512G 222 MHz power amplifier from the AES Ohio
store last Wednesday. It arrived this past Monday. When I opened
the box and took it out of its wrapping, I noticed that the silkscreened
front panel labeling above all of the switches was mostly covered
by the switches themselves... you can see only half of each letter.
The +12 input lead grommet was also only half inserted into its hole.
This amp does not resemble the picture in the AES catalog by any means.
Its external appearance is a considerable disappointment from Mirage amps
of a few years ago. It looks like a cheap Taiwanese clone.

Additionally, when looking inside the amp through the grill on the side,
I can see that the +12 input lead has in excess of 1" of insulation
removed at the point it connects to the power switch on the front.
The wire was stripped way too far back. The potential problem, is that
the exposed conductor is flying about 1/16" above the grounded chassis.
This is the UNSWITCHED, UNFUSED, 25A (specified), +12 input to the amp.

Needless to say, I am considerably disappointed with this product.
I called AES on Tuesday and asked if I could return it. I also clearly
stated that I understood that it was not their fault that this product
is of such inferior quality. They said I could return the amp but I
would have to pay a 15% restocking fee. That's $43.50 (not to mention
return shipping). I indicated my disappointment with that and also
stated I understood that a restocking fee would be appropriate if
someone just changed their mind about a purchase... but in this
case it's a matter of inferior merchandise.

I then called the AES Milwaukee store and spoke with the manager
there. I indicated my dissatisfaction with the product (explaining
about the power lead and the front panel labeling) and my hesitation
at paying the restocking fee in this situation.

His response was (and I quote): "There is no implication of satisfaction in our catalog. You can either return the product and pay the restocking fee or take up the issue with Mirage".

Yeow! Not what I had expected from AES. So, at this point, I'm stuck with this piece of crap Mirage amp and no help from AES.

I will think twice about spending money at AES in the future.

Message-ID: <32A7B038.6DC2@ccom.net>
Source record: 189239

I've played around with my new Kenwood V7A Dual Bander to find
some undocumented features.

1) Hold down the outer two (of four)front buttons and turn
on the radio. The screen blanks - then press CALL.
A letter '2' appears on the screen. Don't have a clue
what this is all about. Let me know if you do.

2) Hold down the F key and turn power on. Unit will enter
some kind of demo mode upon each power up. Repeat to
turn off.

3) Hold down small CTRL button and turn on. Unit goes into
EXTERNAL lock mode. To turn off, repeat prevous step.
Don't know what this is.

4) I have found some TM-733 key sequences work but not all.

If you have any more info (like remote DTMF control by radio)
let me know. The unit setup features are accessed in selectable
menus. Press MNU then turn the tuning knob to see each setup
screen.

Nice unit. Anybody else got one?

Regards.

From: ns1z@agate.net
Message-ID: <5872vo$4ug@service-2.agate.net>
Source record: 189241

chainsaw@tfs.net (Bob) posted this in rec.radio.amateur.equipment:

*Dave;

* Well, hopefully you will be able to answer some of this yourself
*before you qualify for a general-class ticket...

* First, as far as the power supply for the FT-840 is concerned, I am
*assuming that it's a standard 100W output XCVR...so if we do the
*novice-level math and figure the current required to produce 100W
*(with a perfectly effecient transmitter that can convert 100% of the
*energy in to RF out) we get 100V-A/13.8V = 7.25A. Of course the

//////////////////////////////////////
You left out the efficiency of the final, which, with a tail wind,
might be 55%. For 100 watts out that is 167 watts. Now we are up to 12
amps current. Your comments following are excellent.
\\\

radio
*is FAR from 100% efficiency, maybe 50%, so we take 7.25V/.5 = 14.5A.
*In fact, most power supplies for 100W class rigs are 20A supplies.
*You will definitely need another power supply unless you keep the
*output power WAY down.

* Second, despite all the claims you will see in the advertising, a
*vertical antenna is not an optimum choice. If that's all you have
*room for or can get away with due to CCR restrictions in your
*neighborhood, well, then it's lots better than nothing at all. Every
*vertical I've had (3 of them--a GAP, a Hy-Gain DX-88, and a Cushcraft
*R7) was a terrible antenna, even with a sophisticated ground plane
*system installed underneath. What most ads will not tell you is that
*a vertical antenna needs a good ground plane to work well, and this
*usually entails running 16 or more long wires out radially from the
*base of the antenna...this is a royal pain in the butt. The antennas
*which advertised great things with no ground plane simply did not
*deliver the goods...things improved with a groundplane, but not
enough
*to call it a "good" antenna. My first trapped dipole at 30 ft put
all
*of the verticals to shame. And my first yagi...yowwee zowwee!

* Antenna tuners only allow you to "brute force" a signal onto an
*antenna which isn't electically suited for the RF you're feeding it.
*You will be able to trick your transmitter into generating 100W
*output, only to lose most of that energy without radiating it (or God

*forbid, by radiating it right back into your shack/TV/phone lines as
*harmonic RF energy). If you do opt for a tuner, certainly get one
*with an internal SWR bridge, preferably a crossed-needle type that
*allows you to get the SWR in one glance.

* My advice to you is to check out the robust used gear market...you
*can get a pretty nice second-hand rig with a lot more features than a
*new economy model. The ham trader yellow sheet or rec.radio.swap
*USENET group are good places to start looking. Remember that you
will
*need some extra $$ to buy connectors, feedline, and other shack
*essentials that aren't usually budgeted for and tend to overwhelm
*first-time stationbuilders. A good quality silver-plated PL-259
*connector is $4, decent RG-8 coaxial feedline is $0.30 a foot, a desk
*mike for that 840 is probably $75-125, a 20A power supply is $100+
etc
*etc.

* Remember that a good antenna on an HF rig is like speakers on your
*home stereo...the best $5,000 studio-grade Kilowatt-class all-digital
*stereo component system running into a $200 pair of speakers will
give
*you...$200 worth of quality sound. Likewise, a cosmic all-digital
DSP
*computer-controlled rig from heaven running into a hastily-installed
*ground-mounted vertical with no ground radials (at near-minimum solar
*flux conditions) will leave you sorely disappointed. I know...I've
*been there.

* Good luck.

*Bob

Noland,

An axiom of troubleshooting is to ask "What was the last thing done just before the defect occurred?" You state that the problem occurred just after the 30K transmission inspection and your sniffer detects the noise loudest there.

I would take the car back to the shop and tell them to fix it at no charge to you!

Just a hunch --
Seems to just be the country nomenclature. 706E is available
locally, and is the euro version with TX "locked out" in some
frequency ranges (ie, can only TX 144 to 146).

My 93 Max is pretty quiet. Nothing, however, beat my 93 Mercedes 190.
Mercedes has some very tough EMI specs for their components.
I do hear a white noise that comes and goes that I thought was connected
with the climate control. Goes up to
S3 and back down to nothing. Not sure where it comes from though. Is not
a real problem.

You aren't gonna like it, but I was very pleased with my experience with ALINCO. I have an old DJ-160. Well, I basically screwed the thing up by hooking it up to phone lines (through the mic jack), dropping it, and accidentally breaking the little Battery tabs. Eventually, it wouldnt hold a charge, so I called Alinco.
I sent in my Radio (The battery pack was super-glued on) to them and they sent me the "Estimate" in about a week. The price was fair, considering what I had done to it. (I could have salvaged the radio and got a measly $25) So I payed about $100 and they said they would fix everything. I damaged the speaker, the Lithium Battery, the Front Panel was all dented and scratched. I took the estimate to HRO and they said, "It sounds like they're taking off the antenna and putting a new radio underneath." They had to replace the battery. I AUTHORIZED the order and requested that they send it back with the EBP 12 (The 12v 5 Watt Battery) instead of the EBP10 that it had.
In just about another week, they sent it back next-day air and I took it out. If I didn't know better, I would have thought that they DID give me a new radio. The thing looked brand new. After I charged it up (THE 5 Watt Batt was included NO CHARGE), I got on the air and found everything worked! It was MOD'ed and they left that alone... I could tell it was my same radio because my name was engraved on back. I've had no problems since.
Basically, I SCREWED UP my rig, and ALINCO MADE IT LIKE-NEW for FAR LESS THAN A NEW RIG (that I would have to get used to) WOULD COST.
I was very pleased with Alinco's service. My rigs are an Alinco DJ160, a Yaesu747GX, and a Yaesu2200. I have found no inherent bugs in any of those and would recommend the two brands to anyone. I bought the DJ160 and Yaesu2200 because I thought the other brands were either too expensive (Kenwood) or UGLY (Icom's look like bricks). I was pleased with the radios' unspecified features. (Did you know that the DJ160 Handheld came with a TOUCHTONE DECODER? It'll show you the last touchtones that it recieved, up to 16 characters!. It's great for autopatch and other times when you want to DECODE DTMF and DISPLAY it.)

Anyway, not to digress further, ALINCO WAS GREAT TO ME. The rig was out of warranty and they didn't send me away. I found that just being polite and patient go a long way. Not to judge, but we should not just take people's opinion because they have a bad experience and can use the immediacy of the InterNet to "Get Back" at Manufacturers.

73 to ALL.

n2sjh> (N2SJH@aol.com)

You can display the frequency in the left hand (larger) portion of the alpha
dislay and the channel number in the smaller right hand portion of the
display. You use the subdisplay option in the menus to configure what you see
in the smaller right hand portion of the display. I usually use the right
hand side of the display to show my battery voltage, but sometimes I switch it
over to show the channel number. The right hand side can also show the
frequency of the second VFO when you are using the dual watch feature.

4057. Mods For Realistic HTX-100 10M Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-05 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <32A68F27.381F@earthlink.net>
Source record: 189390

Has anyone sucessfully performed any of the published mods for this radio? I performed the RIT-XIT mod and it works fine now, but the mod at the U1208 chip, as indicated in the KF2AT / KB2JPD posting in the various radio mod sites, does not work for me. I cut the trace at pins 28 and 29 of U1208 as prescribed, and installed the 10K resistor to the +5V supply, which was suppose to permit extended reception from 26.0 to 30.0, yet the rig continues to maintain its original limits. The posting has one obvious error - although the instructions refer to the U1208 chip as IC401, the circuit board identifies the U1208 as IC402. IC401 is the Sharp chip across the same board. It has no pins tied as described, and is a different package altogether. I received one message by E-Mail indicating that I don't have the Uniden U1208 chip (despite having that label on this actual IC), and that the pins to cut and jumper via the pulldown resistor are pins 20 and 21, which are also tied together. These two pins apparently connect to an electrolytic cap, not as described. I have not attempted that suggestion, due to lack of confirmation.

If anyone has actually successfully modified a Realistic HTX-100 for extended frequency reception, please let me know how it was done. I believed at one time that all published mods were tested first - now I am beginning to wonder...

Source record: 189393

Steve;

I have a 742 configured in exactly that way and have been using it for about a year with the Comet CX224 tri-band antenna and triplexer.

The radio has been very reliable - no problems with it at all.

The strong out of band signal handling performance on the 2 meter module is not outstanding. I drive through Washington, DC, each day to commute, and had to add that notch filter advertised in QST to knock out the 152 MHz paging signals. After that, all is OK. I think that filter was about $60. Plan on purchasing that if you want to keep wideband capability and operate around paging sites. I've not had any problems with other services.

Yes, cross band repeat can be set up for any combination. Occasionally, mixing products may cause some degradation in performance, but you won't know this until you get to a specific setup. The manual lists some known combinations of frequencies that are less than optimum.

I've really enjoyed using mine. I have the display mounted just under my line of vision on the dash, the controls mounted just above my broadcast radio, and the modules in the trunk with the triplexer. Works great. Email me if you want more info. 73

I have several GE Master Exec II 100 watt UHF multi-channel mobiles for sale. These were all in service until recently removed and replaced with a new trunking system. They are on 451 Mhz so can be easily moved to the ham band or they make excellent repeaters with some modifcations.

They are just like they came out of the company cars. Most are complete with radio, control head, mike, hang up box, speaker, cables, and even a 450 gain antenna. Most of the units have 4-8 channel elements in them. Price is $100 each plus $25 for UPS

I've had a TS450-SAT for almost three years and it has been a fine performer for me. Was favorably reviewed in QST a year or so before I bought mine. Several other hams in my area also have a 450 and are pleased. The above would hardly qualify as a broad sampling of users but I would never the less be surprised to hear of any major problems with the rig.

I was at Universal Radio in Columbus in early November and saw/played with the new KNWD 570. The clerk in the store said they had been selling a ton of them. So maybe that's what people are doing, upgrading from the 450 to the 570 to get the DSP.

>Thanks,
> Richard

Richard,

I used a combination of methods. I began learning the characters using the computer. I then started making my own cassette tapes using Super Morse. I had Super Morse setup to use my sound card and hooked that into a cassette recorder. I just put it into random QSO mode and let the cassette recorder do it's thing.

I listened to the tapes on my daily commute to/from work. I would kick up the speed by 1 wpm everytime I could copy 75% of the code in my head. It wasn't too long before I was copying 13 wpm w/o any problems. I also received lots of on the air practice. This is where I got the most bang for the buck. Getting on the air and experiencing *real* QSO's really helped increasing my code speed.

Get yourself started by passing element 1a. Then get on 40m sometime and start sending CQ until someone responds. If someone comes back too fast for you, just send "PSE QRS". Any good operator will be glad to slow down.

I recently read about someone using satellite control
software to cause the IC-706 to properly track the
receive frequency when using RS-type satellites.

I can no longer access the information.

I would appreciate the name of the software
and a source.

From: bruce shurtz <elfman@aros.net>
Message-ID: <32A71121.388B@aros.net>
Source record: 189410

I have a yaesu ft50r ser# 6f041090 and I bought the comet SMA3 antenna for it but the center pin on the antenna won't reach the center pin on the connector on my radio. As a result of this I had to grind the base of the antenna down to enable the pin to reach. I tried the antenna before
I ground it down on a newer FT50R and it worked just fine. Has anyone else had this or a similar problem?

Thanks

I have no choice but to seek damages against several individuals for their biased and liable remarks. Persons such as Evan Platt, who is not even an amateur radio operator
created malicious, biased and liable remarks, which has caused damage to my personal character and my business. I have copies of all email/newsgroup postings and names of such persons also involved in this act.

I will intiate a civil class action law suit seeking punitive damages against any individual, person or persons who writes, transmits in any form or manner, liable remarks aginst my person, company and or business.

I am also shocked that the web manager of this site has not stopped these acts.

The method that worked for me was tapes and listening to actual QSOs on the air. Always buy the set of tapes for the speed level HIGHER than the level you are working for. For example, if you are working toward 5wpm, then buy the 13wpm tapes in addition to the 5wpm. Practice with pencil and paper with the 5wpm, but listen to the 13wpm tapes in the car or in bed. Listen to QSOs on the novice bands with paper and pencil whenever you can.

Good Luck!

Hi all -

I need to have the above radio repaired. It functions, but seems to need alignment and a general check up...

Plus, I need to find the plastic face plate (tuning) and metal front plate if possible.

Would appreciate someone steering me in the direction of a good qualified Hallicrafters repair man...

Due to the nature of the post, E-mail would be appreciated.

Thanks

John WA6SPA/0

Subject: Request recomendation for good RF Generators.

I am looking for a good (but enexpensive) RF Generator that will produce a stable signal up to 500 MHz or so. I have seen some models that operate up to 150 MHz and claim they will work on third harmoincs (450 MHz) - however, I tend to shy away from this type. If anyone can recommed a model or manufacturer that has a reasonable quality RF Generator at a reasonable price, I would be grateful.

Happy hollidays!

Desmond,
I have an Icom 901 (which is the follow on) and the only problem that I have
encountered that sorta sounds like yours is that the fiber optic cable
sometimes works back out of the connecter, causing a mis-alignment with
the sensors in the radio or remote box.

>
A product like this is made by Tokyo High Power. It operates on 40, 15, and 10 (maybe) meters. It used to be sold here in the US but now is not. There was a QST article a year or so ago giving details about how to get one in the US. I think the price was around $600.

Hello Dave, I am going to buy a radio. The ones I have been looking at
are the Yaesu 8500 and the Kenwood V7A. In your opinion which is a better
buy. I am going to use it for a crossband repeater mostly. How is the
computer interface and software?

It might be possible with a crystal controlled HT or one of the early synthesized models which used an offset oscillator with direct f.m. for transmitting, like the IC02 or Tempo S-1. You only need about 3 kHz deviation, which depends on how hard you drive the radio. The i.f. on these beasts is probably fairly wide and it is should be easy to locate the proper point to insert/extract audio.

Message-ID: <58a06c$94l@cronkite.cisco.com>
Source record: 189149

Agreed with the previous comments on this thread, but just want to add
my two pennies here...

I started out using the tapes. They worked fine at 5wpm for me because
I am "translating" the dits and dahs in my brain.

To pass the 13wpm, you will have to quit that "translation" process
and start "listening" those dits and dahs as characters.

For example, if you hear "da di da di", this is not "da di da di"
anymore. It's a "c". If you couldn't pass this stage, you will never
get to 20wpm.

Think of it as another language, where you first learn the sounds,
then the characters and then the whole word.

By the way, I passed my no-code in Apr and got my Advanced in Sept.,
just want to let you know that this is all possible. Some people have
a very good ear and some people don't. Unfortunately, I am the latter
type. But if I can do it, I am sure it's just a matter of time for you.

You may also want to try the Ham Station in Evansville, IN. It's one of the larger individual retail ham operations in the U.S. They advertise in QST and the others. They have an 800# and a Web site (check the ad).

These guys are extremely honest and often have LOTS of used gear, at least as much as any indiv. AES store. Their prices are fair and they are good on returns and repairs. I would go to them first for just about any purchase.

4121. Uniden BC-760 PL ?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-06 00:00:00 UTC
From: kjsmith@violin.aix.calpoly.edu
Message-ID: <58a60v$oa1@violin.aix.calpoly.edu>
Source record: 189154
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

I'm looking at buying a new scanner for my truck, and the Uniden BC-760XLT is the only one that will fit (sigh). I'm hoping to replace a RS Pro-2026.

I'm considering this scanner because of the PL option, as it should serve to eliminate interference problems I'm having. I attempted to call Uniden Customer Service for clarification of this board, but they were WORTHLESS (and rude).

I'm hoping someone on the net with this configuration can help.

1) If I have the tone board installed and turned on, can I program different tones for different channels.
2) If I have the tone board installed and turned on, can I program certain channels in PL decode mode, while others remain in CSQ (carrier squelch, no PL) mode? Uniden said no, it's all or nothing, but I have a hard time believing I can't just enter "0" for the PL for that channel.
3) If the scanner stops on a channel with the wrong PL, squelch won't open, but will it sit there until the carrier drops, or interrogate the PL, determine it's the wrong one, and then resume scanning?

Simple questions, or so I thought... Uniden was trying to tell me that only channels in the 460MHz range had PL, and other such nonsense. I wish I could blow them all off and install a Pro-2006 (sans PL, but the triple conversion would do the interference elimination trick), but the 2006 is simply too big to fit in my small truck (Isuzu Trooper).

Any help would be most appreciated.

They should work if the frequencies are the same. How much money are you looking to spend on the radios. There's a site that sells the Maxdn 210+3 for 209. and they are 2 watts w/ repeater channel access. His site is http:/www.eskimo.com/~antenna/index.html. Motorolas radios also look well constructed. There site is http:/www.mot.com/.

It'll resume scanning after a very brief delay.

The 760 is an excellent mobile scanner. With PL, it is great...if they
would put DPL in it, it would be almost unbeatable. I've owned two of
them.

If you have any other questions, I'll be happy to help.

> Chris,
I've always had good luck with AES, too. In fact I ordered a dual

band TM-733A from the Ohio store today. Great deal. $399 with duplexer.

I'd suggest you write the ARRL with copies to AES and Mirage. I did that once with a major Heathkit problem and got a personal call from Heath's president offering to refund my money, something they were not known to do.

Sounds more like you might have a dirty connection in that circuit. If
you had fried a power tube you probably would not be getting anything
close to 100 watts out with a 1:1 swr. How does the output sound? Make a
contact locally and get an educated ear's opinion.

From: hershman <hershman@ix.netcom.com>
Message-ID: <32A8F319.1136@ix.netcom.com>
Source record: 189166

Got the info. The Icom 706E version is for Europe (Tone burst etc.)
The Icom 706J is the Japan version (50 watts on 6 meters).
The Icom 706 MARK II is a updated version of the 706E that was designed for the European Market but never has been produced.I was told it would include 4 1/2 meters for the British.(100 watts)
The 706A version that the gentleman saw on a dealers price list may designate "American Version"? Also, it could mean "A Stock" which is brand new sealed box verses "B Stock" which is slightly used.(opened box). Finally, it could mean that Icom has a new updated version of the rig. This could be like the Icom 737 the the Icom 737A that fixed the bugs in the earlier version. This "A" version showed up just one year after the original version was released. I will pass any info on as I receive it. 73's NS1R Steven Hershman

Dear Mr/Mrs/Miss 1

I would strongly suggest consulting a lawyer who will explain the nuances of a class action lawsuit. Although I am not a lawyer, I do believe that it take more than 1 to initiate such a lawsuit, 1 being a number not a name. The State of Puerto Rico is noted for having lawyers who specialize in handling capricious lawfuits filed by sciolists such as yourself. Should you have difficulty in locating suitable counsel in the State of Puerto Rico, I can recommend numerous Philadelphia lawyers who maintain their practices in the State of Washington D.C.

I hope that you have ample proof of how these individuals have done damage to your paralogistic business. Additionally you should be prepared to define and explain your "personal character" and how it too has been damaged.

I have been lead to believe that Mr Platt et.al have retained the prestigious law firm of Dewey, Cheetum & Howe (Cambridge MA) to file a class action lawsuit against you and you company for discriminatory business practices. Mr Platt et. al. feel that by offering only amateur radio operators pagers that work in all 51 states at a discount, you have discriminated against those who are not amateur radio operators.

I also understand that the State of Guam has contacted the Enviromental Protection Agency concerning your attempted unauthorized use of their waste treatment facilities.

Please keep me informed of the status of these legal proceedings. If and when this amphigoric matter does manifest itself in front of a Federal magistrate I would like to observe those proceedings. I do sincerely hope that I will not be cited in contempt of court for laughing uncontrollably as the magistrate attempts to determine the outcome of this most farcical matter.

One more thing sir/madam/neuter, as long as you are going to be perusing the dictionary it might be most beneficial if you were able to determine the difference between libel and liable. I must sign off now as I am libel to bust a gut if I continue.

de n4jvp

PS Please remember that it is after Labor Day so it is in poor taste to wear a white belt and white shoes with your liabel suit. BTW is your liable suit polyester?

Sounds like you have already done a rather thorough job, but here's
something else to try. With an ohmmeter, check whether the antenna
coax shield is well connected to the body AT THE ANTENNA. You must
disconnect the cable from the radio to check this. Make sure the
shield is not shorted to the body elsewhere.

4140. Icom 820H - How good @9600 ?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-06 00:00:00 UTC
From: illmayerp@mail.dec.com
Message-ID: <32a77862.1868023@news.stl.dec.com>
Source record: 189245

Hello all

Well total confusion appears to creep in when selecting a 9600 baud ready radio. I read the article in June 1995 QST about the TEKK and Icom 820H radio. The ICOM had a BER equal to the TEKK radio which is pretty good !!!

I then spoke to another group that said the ICOM 820 was miserable as it had a txdelay of over 150ms !! I agree, it may then have a fantastic BER but the TEKK has already shot down 3-4 packets of data before the ICOM settles down ?!?!?

Can anyone validate this as the ICOM is a HELL of a lot of money WASTED if the "OVERALL" throughput is poor......

Thanks..Pete..vk2yx

4145. SbFFT1.2 SB16 filtering & spectrum - BETTER GRAPHICS SUPPORT

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-06 00:00:00 UTC
From: kevinm@eden.com
Message-ID: <5884qt$1s5$3@boris.eden.com>
Source record: 189250

I have uploaded to Simtel.Net:

http://www.simtel.net/pub/simtelnet/msdos/hamradio/sbfft12.zip
ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/sbfft12.zip 1558410 bytes

sbfft12.zip Sound Blaster spectral display & filtering

Features:
* Sound Blaster 16 (or 100% compatible) input and output.
* Band widths of 2K, 4K, 8K or 16K Hz.
* Spectral resolutions of 1 Hz to 16 Hz per pixel.
* Display of power spectral density with any of 4 color maps in either
linear or logarithmic scale.
* Define and use up to six filters simultaneously -- band pass, band
stop, low pass, and high pass. Filters have 25 Hz skirts at 3 to 50
dB points.
* Filters are defined graphically by mouse movement based upon the
displayed spectrum. Once you see a signal, you can quickly define a
pass or stop filter around the signal by clicking and dragging the
mouse.
* Net filter passband is displayed at all times.
* Filters can be selectively enabled and disabled by a single keystroke
or mouse click.

Special requirements: DOS 3.0 or higher, SB16 or 100% compatible, SVGA,
VESA 640x480 & 1024x768, mouse, 486/66 or higher to display spectra,
Pentium 120 or higher to filter.

Changes: Differences from version 1.1:
* Compatible with many more graphics cards.
* Full screen mouse support with faster response at high resolutions.
* Mouse click to enable/disable and delete filters.
* Defaults are assumed for the Blaster environment variable.
* Support for PCX graphics files instead of TIFF.

Are there any reasonably modern (=small) HTs out there that are capable of 9600 baud packet, either stock or after moderate modification? It seems everything I've seen lacks the proper provisions, having only 5kHz deviation, no direct modulator access, and no wide unfiltered rx access.

>
>Frank reid@indiana.edu W9MKV
The AT-180 can only tune antenns that are feed with an unbalanced feedline like coaxial cable. The maximum tuning range for the AT-180 is 16.7 to 150 ohms impedance. The AT-180 is to be used with dipoles within the band the antenna was desgned for, tri band antennas, verticles, coil type mobile whips. It will not tune long wire antennas like the 102 " stainless steel CB whip.

The AH-3 is a " L " network and end feeds a longwire antenna. It will tune the 102" whip from 80 to 10 meters, it will not tune coaxial feed antennas , dipoles, tri-banders, verticles. It does require a 100 square foot ground plane to tune against to properly work. I used one in a small pick-up with good results.

Help!!! I have two VHF RCA repeater/base stations I would like to use as a repeater. I have not been able to find the manuals for them as RCA is no longer supporting them.

From what I have been told they are great equipment and many amateurs are using them for repeater around the world...

If you can help me please E-mail or resond other wise.

From: Bowes@ceu.cz
Message-ID: <588mst$1801@tomb.env.cz>
Source record: 189265

Dear all,

Mainly European readers will know what I talk about when I direct my questions towards the review of the new AKD HF reciever Target HF3. When I read the review, John Wilson was emphasising its great RF performance in comparison to the other Taiwanese made portables within the same price bracket. I am very interested in buying this reciever but I would like to investigate the meaning of RF performance in relation to HF recievers.

To make a comparison I have the budget reciever Sangean ATS-803A.

I would greatly appreciate it if someone familiar with this term could explain it to me and then try to context it with listening performance and advantages against such models of radio like I have presently. I would like to obtain this final 'piece' of information before going to buy !

Thanks alot for your time and help

Press and hold down the BAND and SQUELCH keys and while holding these two,
press the POWER ON button. Hold all three for 5 seconds or so. This should
lite up most of the display and that's OK, just rotate one of the dials on top
and you're in business. Receive now goes from about 100 Mhz up to 999 Mhz,
....AND..... with remarkably good sensitivity.

4165. Parting out Heath SB-102 - need anything?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-06 00:00:00 UTC
From: kc5ng@dlep1.itg.ti.com
Message-ID: <5898se$bna@sf18.dseg.ti.com>
Source record: 189270
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I am parting out a Heath SB-102 HF transceiver. Do you need any parts
to repair your Heath rig? Most of the electrical parts are the same in
the SB-100/101/102 and HW-100/101 rigs.

The following parts are NOT available, so don't ask:
- Meter (I do have one with a bad face and good movement, however)
- Plate and load capacitors (I'm using them in a HB 807 transmitter)
- Tubes
- Plate tank coil
- VFO dial (it was shattered already)
- CW filter (put it in another rig)
- Filter selecting lever knob (it was broken anyway)
- Crystals (all have been sold to other Heath owners)
- RCA jacks from rear panel
- Rubber drive belts (they were rotted)

The LMO works, but tuning was real scratchy, indicating either worn out
or dirty bearings on the tuning capacitor inside.

I do have nearly all of the internal parts still available. The front
panel is not in great shape, but it's usable. The markings are faded,
but the paint's not too bad. The cabinet is dent-free and the paint
is in fair condition. Good restoration candidate.

Email me with your parts needs.

>I then spoke to another group that said the ICOM 820 was miserable as
>it had a txdelay of over 150ms !!

Hmm .. I am running my ICOM 820E with 70ms txdelay without any problems
for more than two years now. It would prefer a much lower dx-delay, but
then I have to use a radio with crystals and not one with a PLL; that's it.

All what I have done for the installation was, following the instruction of
the user manual, connect the TNC and to figure out the lowest dx-delay value,
that is possible. 60ms is a little bit to low, but 70ms works fine. Since
the first day it runs and runs and runs and runs ..

BTW: Around my QTH we have some 9600 "digis" and I can't remember any problem
to connect one of them at any time of the day and to transfer long files
with excelent bytes/sec rates (when I am the only one who is connected, of
course :-)

But mostly I use it for beeing connected into the next DX-Cluster, hihi.

As a newbie I am I am lost as to which radio to buy. The only thing I am sure of is that I will buy a handheld. I am leaning towards a tri-band because I do not know what's on what band, here in Chicago.

1. Do I buy a tri-band radio or do I pick a band and live with it, or end up with multiple radios?
2. Is there some reason never to buy a multi-band radio?
3. What is a CTCSS encode and decoder?
4. What is sub-audable tone scan feature?
5. What is DTMF paging?
6. What is PL encoding?
7. Do I buy Alinco, ICOM, YAESU, Standard, Kenwood?

QST Reported that the 820 was the best 9600 bd ready radio on the market today - That might need to be qualified as 'best PLL 9600 bd ready radio on the market'. They did a review on these earlier this year. They also included the TEKK which is also at the top as a crystal control radio - a comparison of those would be good.

At work now so I can't be as specific as I would like - e-mail me and I'll send you the date of QST or type up a quick summary.

4173. Heil microphone w/ICOM 706

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-07 00:00:00 UTC
From: Kellan Sprouse <ksprouse@awod.com>
Message-ID: <32A9EE73.C05@awod.com>
Source record: 189029

I have two different Heil Microphones that I have tried using with both of my ICOM 706 radios utilizing the VOX circuit. I seems that I can hardly get more that 2 syllables spoken before the transmit relay drops out. I have adjusted the VOX gain to MAX and the ANTI-VOX to MIN, with a vox delay as high as 1.5 seconds. If I use an ICOM microphone the problem is not present. I believe this to be due to the presence of a preamp circuit on the ICOM mike as opposed to the HEIL microphone. I would like very much to use these expensive microphones for their convenience but without VOX they are of little value to me. Does anybody have any suggestions...I have been unsuccessful with questioning both ICOM and HEIL.

Thanks and 73,

Kellan Sprouse

> TO CHANGE THE TONES"!! HOW ancient!!! I can't believe this! If anyone
> can confirm or deny this please get back to me.

I think that the way 10 meter FM repeaters work, all you need CTCSS for, there are only two tones per zone that are commonly used. Around here, the S.F. Bay area, the only 10 meter repeaters I have worked all use the same tone frequency. So having it set my a dip switch is not really a disadvantage unless you are mobiling accross country.

Some very fine transceivers I have seen or owned, have had the same set up with dip switches.

Of course, I could be absolutely full of choclate chip cookies!

***EASY MONEY - FAST !!!!!

THIS IS THE FAIREST MOST WAY HONEST WAY I KNOW TO SHARE THE WEALTH !

Would you like to make thousands of dollars, quick, legally, with NO CATCH? then keep reading......please take 5 minutes to read this article it will change your life, just like it did mine.. it's true! you can make up to $50,000 in 4 - 6 weeks, maybe sooner!

I SWEAR I'M NOT LYING TO YOU.AND THIS IS NOT A SCAM! if your interested then keep reading;if your not, i apologize for wasting your time.

this is my second time i am doing this. the first time was 7 weeks ago and i have received $48,000. the first week i received $37 dollars,the second week i received $1,364 dollars and by end of the 3rd week i had received $12,856 dollars and to this date i have received $48,074 and money is still coming in.

when i first saw this article i though it was some kind of scam, but for $5 dollars and 5 stamps i thought i would give it a try.after buying a new car,new computer and putting a down payment on a house i relized this was the best $5 dollars i ever spent!

this process is very simple, and it consists of 3 easy steps:

(this whole process will take only a few hours of your time)

STEP 1: get 5 separate pieces of paper and write the following on each sheet of paper..."PLEASE PUT MY NAME ON YOUR MAILING LIST.YOU ARE NUMBER 4." get 5 $1 dollar bills and place one inside of each paper that you just wrote on,and fold each piece of paper so the bill will not be seen in the envolope (otherwise,nosey people who like to steal envolopes with money in it will get yours). put one paper inside the envolopes and seal it. do the same for all 5. you should now have 5 envolopes sealed,each

with a piece of paper and a $1 bill stuffed inside the paper.make sure those words that were stated above are stated on each paper. what you are doing is creating a service by this, this is PERFECTLY LEGAL. now then, mail the 5 envolopes with the paper and $1 dollar bill in each to the following addresses:

1. Dan Wood

1201 #A Anderson ST

San Clemente, CA 92672

2. S. Stapleton

6329 HWY 135 N.

Lake City, AR 72401

3. C. Crafton

1231 SW 61st Terr. #2

Gainesville, FL 32607

4. Michael Barratt

27 Park Ave

Poughkeepsie,NY 12603

5. Louie Page

2907 W. Gregory

Chicago, IL 60625

STEP 2: now take the first name off the list that you see above, move the other 4 names up (5 becoming 4 , 4 becoming 3 ect.)and put your name as number 5 on the list. you can slightly alter this article if you need to, editing what you need to edit.

STEP 3: post your amended article (with your name at number 5 of the list) to at least 200 newsgroups (i think there are 18,000 of them). all need is say, at least 200. HOW TO DO THIS: IF YOU HAVE NETSCAPE DO EXACTLY THE FOLLOWING:

1) click on any news group like normal,then click on "to news",which is on the far left when your in the newsgroups page. this will bring up a box to type a message in.

2) leave the newsgroup box like it is, change the subject box to something flashy like, "NEED CASH $$$" ,"READ HERE $$$" or "FAST CASH $$$!!.
3) tab once and you should be ready to type. now, retype (only once) this whole article,execpt to insert your name at #5, and remove #1 off the list, plus any other small changes you think you need to make, keep almost all of it the same.
4) when your done typing the whole article, click on file in this box, right above send, not where it says netscape news on the first box. click on "save as" when your under file. save your article as a text file to your c: or a: drive. do not send or post your article until you do this. once save move on to number 5 below.
5) if you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below file, and right above Cc: .
6) here's where your going to post all 200. ok, click on any news group then click on "to news", again in the top left coner. leave the newsgroupss box alone again, put a flashy subject title in the subject box, hit tab once your in the body of the message, then click on "attachments", which is below the subject box. you will get another box to come up. click on "attach file" then find your file below that you have saved; click once on the file,and then click open' now click on ok; if you did this right , you should see your file name in the attachments box, and it will be shaded.
if you use explorer its just as easy.... holding down the left mouse button,highlight the article. then press "ctrl" key and the "c" key at the same time to copy this article. then print this article for your records to have the names of those you will be sending $1 bills to. next go to the news groups and press "post an article", a window will open. next go to the news groups and press "post an article" a window will open. type your headline in the subject area and then

click in the large window below. press "ctrl" and the "v" and the article will be placed in the window. if you want to edit the article do so and then highlight and copy it again.now everytime you post the article in a new newsgroup you only have to repeat "ctrl" and "v" and press post.

7) THATS IT. each time you do this , all you have to do is type in a different newsgroup,so that way, it posts to 200 different newsgroups ..you see? now you just have 199 to go!! (dont worry, each only takes about 30 seconds once you get the hang of it).REMEMBER 200 IS THE MINIMUM.

THE MORE YOU POST THE MORE MONEY YOU WILL RECEIVE !!!

AND THATS IT !!! THATS THE ONLY 3 STEPS THERE IS !!!

you are now in the mail order business and will start receiving your $1 envolopes from various people all over the world within days. hint: you may want to rent a po box eventually because of all the mail you will be receiving. JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT, PLEASE.

LET ME TELL YOU WHY THIS SYSTEM WORKS !!!!

out of every 200 postings, lets say i only receive 5 replies (which is actually very low!) so i made $5 dollars with my name at # 5.

now then,each person that just sent me $1 makes, say only 200 postings now with your name at #4, which is a total of 1000 postings,not including yours too. 50 people send you $1 now; thats $50.00 you just made! now, then your 50 agents post 200 each with your name at #3,or 10,000 postings (50x200). average return is 500 a $1 each is $500.

they make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! and finally, 5000 people make 200 postings which with your name at #1. you now get a return or $50,000 before your name drops off the list. and thats if everyone only makes 200 postings and if only 5 people respond !!!!

no like me when your name drops off the list just find the latest

posting and start over again..YOU WONT BE SORRY !!!!

4179. FS: ICOM 706 Station

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-07 00:00:00 UTC
From: "Samuel S. Yates" <ab4n@erols.com>
Message-ID: <32A9FF9A.458@erols.com>
Source record: 189035

I have a complete (less power supply) ICOM IC-706 for sale. The station
includes the following components:
IC-706 160-2 Meter Transceiver (new 8/96 never mobile)
AT-180 Matching antenna tuner 16-6 meters
FL-100 500 kHZ CW filter
OPC-581 Seperation Cable Kit
MB-62 Mobile Mount
MB-63 Faceplate Mount (used for remote operating panel mount)
MFJ-5383I Computer Interface Cable
Entire package Amateur Electronic Supply price = $1950 plus shipping.
My price is $1560 plus shipping (from Culpeper, VA)

If interested, post a note here or email me at ab4n@erols.com.

73s and happy holidays,

Sam AB4N

4180. Seeking for the FT-50R manual

Source record: 189036

Hi all,

does anybody of you know about some ASCII, PostScript or
other-electronical version of FT-50R manual? I got German manual with
mine, which is totally unusable of course.
I tried Yaesu's "literature request page", but it yielded no results.
Any help will be greatly appreciated.

Mikhal F. Kresliik, OK2XHX

Yeah...I feel your pain. I'd much rather spend hours and hours finding a replacement tip than buying a whole new soldering iron for $6.99. When I had the same problem I sent messages to several newsgroups and contacted many manufacturers in writing and via telephone.

But I do offer words of encouragment. After several days of effort and several e-mails, phone calls, and letters, I was able to find a replacement element, shipped by Acme, for $12 plus $3 S&H. I figure that if you count the value of my time, plus my expenses, I spent about 650 bucks but it's a hell of a lot better than letting "big business" take advantage of me!

Hang in there!

If I remember correctly, you set the VFO to the desired frequency
and push and hold the f button. You should see some flashing of the
memory location numbers. Use the knob or the up/down buttons to choose
the memory location number that you wish to program the freq on the display
into. Then push the f button the lock it in.

good luck

I don't know about "best", but I'm having fun with the IC-706 in my truck. It's a little shy on mic gain, and the 2-meter FM output is a joke, but the price was right. (I won it.)

The detachable front panel is an excellent feature, and one I would look for in any mobile rig. Although I always wanted a 6-meter SSB rig, I never seriously looked at any news ones. My impression, however, is that the number of HF/6-meter rigs is larger than the number of all-mode 6-meter only rigs.

To make a rptr out of a GE MSTR EXEC II, you MUST do the following:

Add a jumper across the RX OSC Switch xstr....this will allow the RX L.O.
to be powered all the time...(it IS switched off during PTT)...
Also a Diode (CR501 ?? I THINK!) on the Systems Audio Squelch (SAS) board
must be removed to stop the PTT from activating the rx Mute ckt....Follow
the PTT line on the schematic and remove the diode that feeds the RX MUTE
xstr....Just clip it off the board...if you have the MSTR EXEC II
manual, the mods for duplex operation are shown on the schematic!

With those two mods (and a second antenna connector on the front for the
RX input (leave the antenna relay, etc for the TX), you're in business.

Ive have several GEs running like that...the mods take less than an
hourfrom start to finish...add a controller and wiring to the plug and
you're all set.

Help. Anyone out there have a D1010 amp ? I recently purchased one
over the 'net, but can't get it to work. It has two unidentified
connectors on the back. Also a couple of internal adjustment pots.
What do they do? A schematic or manual or any help would be
greatly appreciated. I'll pay copying and postage. Thanks.

I just rented a Jeep Grand Cherokee for a business trip from MA to PA...was reall dissapointed at the noise. S9 on 40 meters made it almost unusable! I'm assuming that the fuel pump is not the only source in the Jeep as when the ignition is turned on without the engine running the fuel pump should turn off after it builds a pressure. My GMC S-15 turns off after the pressure comes up but at least it's quiet RF wise except for the occasional "pop" when it comes on...

: Icom didn't make a tone encoder for the IC-2AT. Any suggestions
: for putting another manufacturer's unit in one?
: Dale, NJ8X

Dale,
It's very common for folks to use the Com Spec SM-32 tone encoder. It's thin as a credit card and kinda made for that type application. You can also cut a square out for the BCD frequency switch on the back panel or fix the frequeny (easier to do) and leave it.
I've go the latter going myself and seen many of both.

4194. Re: Uniden BC-760 PL ?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-07 00:00:00 UTC
From: "sdonnell@nh" <sdonnell@ultranet.nh.com>
Message-ID: <32A907A1.190@ultranet.nh.com>
Source record: 189084
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Hi,the BC760 is a great little scanner, we have owned one for some time now. As to your questions about the functionality of the PL feature: You can program any PL tone into any memory channel. If you don't wish to use PL decoding on a given channel, simply enter 000. When the 760 scans, it will stop,very breifly, on an active channel. If it does not see the correct tone, it will resume scanning again. This only takes about 100 milliseconds.

If you must have DPL decoding, and you are handy with a soldering iron, you can easily add this capability. While somewhat limited,permting only one DPL code to be decoded, it primarily invloves adding a DPL/DCS decoder module, like a Comspec DCS-23 in paralel with the tone input and logic output of the exsisting decoder unit. The scanner's CPU doesn't know the tone deocde logic flag is coming from a different tone unit, it simply reacts to it in the same way it would to the PL decoder. We orignally documented this in our (former) RCMA Journal column over a year ago.

4196. Dentron Clipperton-L Amp Question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-07 00:00:00 UTC
From: tenorman@i1.net
Message-ID: <58b2cr$mib@news1.i1.net>
Source record: 189086

I recently picked up a Dentron 2KW amp. It used 4
572B tubes. Can get the amp to put out 700 Watts on
CW, but it is using 1 amp in, with 1500V to obtain the
power. With the input power at .667 Amp, at 1500v,
or 1000 watts in, I only get about 400w out. I can
push the amp to 1 full Amp in, with 700 watts out,
but it seems harsh to push it that hard. By the way,
the input power from the exciter is only about 25 watts
for the 400w out, and about 60w drive for the 700 watts
out. Manual claims you need 60-125 watts to get output,
but that pushes the input current beyond 1 amp. Any
ideas? This is into a good load and is consistent
throughout all bands. Could the silly current meter
be off? I don't know anymore. Any help would be
appreciated. Thanks, 73, Mike... WQ0N

4197. FALCON 4111C 2METER AMPLIFIER

From: appld@sk.sympatico.ca
Message-ID: <58ajen$a0n@mongol.sasknet.sk.ca>
Source record: 189087

Our repeater group has been using the Falcon amplifier for a few years. At no time tho were we able to obtain the 100 watts rated power output. The most we can get is 70 watts. Thats plenty for the repeater. However its always bothered me as to why not the 100 watts. Has anyone any suggestions. Are there replacement FET power transistors for those in the unit. It presently uses Polycore F1260 power fets.

We are driving the unit with a GE EXEC II converted to a repeater configuration running at reduced power.

Any help or suggestions would be appreciated.

Cheers
Doug Appleton VE5DA

So do I. And I have the ones with "Evan Platipus." I have contacted your administrator and demanded action be taken against you, for that and for your consistant misuse of this newsgroup for commercial and non-amatuer related issues (see "CHEAPER THAN FREE PAGER FOR ALL 51 STATES", see "PENTIUM COMPUTER FOR SALE." I think your lack of knoweldge of our government (mainly how many states we have) cause damaged to your business (if you call it that). So sue yourself in court. I say the state of Guam should sue you. Flush twice, it's a long way to your house.

>I will intiate a civil class action law suit seeking punitive damages
>against any individual, person or persons who writes, transmits in any form
>or manner, liable remarks aginst my person, company and or business.

Umm. Rite. And you are going to be counsel, I assume? Someone who thinks 1 person saying 'slanderous' remarks is a class action suit, which is handled in Federal court? Sure. I hope you are a better pager provider than paralegal.

>I am also shocked that the web manager of this site has not stopped these
>acts.

Umm. There's a WEB site (see: http://www.site.com) and there is USENET. WEB sites are accessed via a web browser (see NETSCAPE). Usenet newsgroups are not 'managed'. If they were, you'd be gone a long time ago.
Now quit your pager spam, quit posting your computers for sale, or I will have the USDA arrest you for tresspassing on my lawn. (Sorry, I've been reading your "Paralegal in 2 days!" course.

YAWN If you think your admission is *NEWS* you're more stupid than I
suspect. There's been untold thousands if not hundreds of thousands of
people that have turned an interest in amateur radio into a career as
a tech/engineer/etc. , if not just a satisfying hobby/service/pastime,
but it's *SHMUCKS* like you that appear to have no interest in
LEARNING anything other than how to turn it into a glorified CB band
that tends to *frost* people that enjoy/respect amateur radio.

4201. FS: IC2SAT (u fix it) + many accessories $75

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-07 00:00:00 UTC
From: DALBERT@ciena.com
Message-ID: <DALBERT.40.002A8F1A@ciena.com>
Source record: 189091

For Sale:

ICOM IC-2SAT 2m HT & Antenna
Brand new internal battery
110v AC adapter/charger
Protective carry/case
UT-50 Tone Squelch encoder/decoder
BP-82 external battery
CP-12 Car adapter/charger (plugs into cigarette lighter)
Original manual
Full schematic

$75 obro

Rx works OK, Tx gets out but voice is garbled.
Volume control needs to be replaced (has several dead spots)
I don't have time to try to fix this, but if you have a
2SAT, this should be worth it just for the spare parts,
new internal battery, and accessories.

If interested, call (301) 949-1505 or email dalbert@ciena.com

I don't remember anything on the Tech or Novice exams which covered CTCSS or DTMF signalling. I doubt the other exams (General/Advanced/Extra) cover them either.

I really hate it when people "welcome" new hams like this...

CTCSS (Continuous Tone Coded Squelch System) aka PL (Private Line) aka CG (Channel Guard) aka TSQ (tone squelch) and aka a few others I can't remembe, is a system in which subaudiable tones are sent/received by radios to access repeaters, or to keep things quiet(er) when using simplex coms. Enough repeaters require CTCSS that you shouldn't consider a radio without it. Decode is a nice option that many hams don't bother with, but if you've got repeaters in your area that pass (or regenerate) PL, it makes listening more enjoyable (less noise, squelch tail elimination, etc).

Sub-audible tone scan is a function of radios with a PL decoder that is capable of scanning for the appropriate tone.

DTMF paging is just that, a paging system that employs DTMF (touch tone) to open the squelch.

Multi-band vs. single band... depends on your area and desires. In my area (Central Coast of California), there are almost as many open 440 machines as there are 2m machines. I couldn't live without it. In other areas, you'd likely be better off with 2m/220, or maybe 2m/1.2GHz...

Welcome to the hobby!

Perhaps you are thinking of the Tokyo Hy-Power HT-750 which operates on 40, 15 and 6 meters. It was available for a short time in the U.S. back in '92 or '93.

If you can obtain a copy of the Oct. '94 issue of QST, pages 62 and 63 outline the steps the author took to obtain the ht from Tokyo, Japan. The article lists the fax number for Tokyo Hy-Power Labs, Inc. as 011-81-48-479-6949.

Don't know if this is what your looking for but hope it was of some help.

Hi!
I want to buy a shortwawe reciever for airband listening (SSB).
But the problem is that the shopkeepers wants to sell me the most
expensive things, and therefor I thougt I should be smart and ask if
some of you gurus could recommend a good reciever! It should have a
scanning device, and a price at about 900USD/600UKP.
Please, someone reply on this one?

Yours..

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. Some of the URL's arent resolving yet and some in reformating the text are doing funny things. But I am still working on it

When I get the mic in the mail I may agree. I still didn't like the way
I was treated (dealers,Alinco policy). Perhaps the dealers will be more
happy to order the mic (options) in the future. There is a lot more
profit in the options than the basic radio.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

I just passed my technician exam and I would like to get started on 2m / 70 cm.. Many books publish articles about what a beginner should get, but the opinions vary greatly.

I'm interested in repeater, simplex, and packet work, maybe some SSTV. I don't know if I should get a yagi or a groundlane antenna. What's the best deal in my case? Are there any brands that can be recommended?

What is a good transcheiver (dual band)? (with packet capability) I want a mobile one, but with enough comfort so it can be operated in my home to..

I would really apreciate your help,

73, Patrick

First: what wattmetter. DO NOT DEPEND ON THAT DENTRON
wattmeter in the rig! Get a nice 52ohm dummy load and a
good wattmeter. Try that - if you get low output then
you can decide to live with it or buy new tubes.
My mla2500 wattmeter reads lower than what the outboard
meter reads also.....

Mike Kraml <tenorman@i1.net> wrote:
: I recently picked up a Dentron 2KW amp. It used 4
: 572B tubes. Can get the amp to put out 700 Watts on
: CW, but it is using 1 amp in, with 1500V to obtain the
: power. With the input power at .667 Amp, at 1500v,
: or 1000 watts in, I only get about 400w out. I can
: push the amp to 1 full Amp in, with 700 watts out,
: but it seems harsh to push it that hard. By the way,
: the input power from the exciter is only about 25 watts
: for the 400w out, and about 60w drive for the 700 watts
: out. Manual claims you need 60-125 watts to get output,
: but that pushes the input current beyond 1 amp. Any
: ideas? This is into a good load and is consistent
: throughout all bands. Could the silly current meter
: be off? I don't know anymore. Any help would be
: appreciated. Thanks, 73, Mike... WQ0N

> 6. What is PL encoding?
> 7. Do I buy Alinco, ICOM, YAESU, Standard, Kenwood?

I don't care if you know the material or not. I don't know transistor theroy very well but I still could design a tube circuit in a pinch. In time you will learn what you need as you need it.

I am new to Chicago and have found CTCSS encoder is mandatory. Most of the repeater are open but due to interferance are using "PL" (Motorola term for this)(See the ARRL repeater guide as which PL are being used on which repeater). Most new radios this is standard feature. Some older radios are set up for it but you neew to buy of build the encoder. Communication Specialist make several.

As for which radio to buy, several things will determine this. Budget, ah yes, the almighty dollar. Single band radios run new between $300 and $600 dollars. Dual band between $450 and $850. It use to be cheaer to buy a dual band radio instead of two single band radios. Space, cars are smaller, but they were never that big. Multi-band radios are more space efficient. Features, I like the new Standard tri-band because it is more afforeable and it has 6-meters. The Kenwood 642, 742, and 942 are moe flexable but slightly expensive with options. Brand? Your guess is good as mine. My station is divided among three primary manufactures. Kenwood, TenTec, and Ameco (yes Ameco).

Pick a radio that has the features you want, a price you can afford and then be flexable in case a good deal shows up on returned or used equipment. I recommend bands in the following order base on popularity. 2M, 440MHz, 220MHz, 1296 or 6M.

Good luck and 73's D. Pat Breeden WB3KUM/9 Zion, Ill.

I think it's "libel" not liable...for example, "If you pursue legal
recourse, you are liable to wait for many moons to collect the cash."

Liable basically means most likely to.

Try a dictionary...you will need it to fill out the court paperwork.

These are all good questions, but I'm afraid from the replies below you may get more noise than signal here...The internet seems to encourage bad behaviour, unfortunately.

My recommendation is to find the local ham radio club and go to a few meetings and get acquainted with some local folks. You will make some new friends and learn a lot! I know that I have over the years. I'm sure you will meet many who will give you better advice than what you will likely receive here.

Hi!
I`m a norwegian dedicated air-traffic shortwave listener who have a simple Sangean ATS 818, and would like a new (second hand?) and better receiver. So I thought why not ask a guru. If you can find time to reply on these questions, I`d be happy. If not, I understand...
Now the questions:

If I buy a receiver e.g. Yaesu FRG-100, Drake R8(A) or Lowe HF 215/225, will I notice any difference? The problem now is that, during daytime, the noise is dominating any possible signal. That is the case most of the year.
Do you know if there is a scanning device integrated in any model?
And is it poosible to buy a second hand from anywhere?

Thank you in advice!

They gave me a hard time also when I tried to order a replacement mic
for the Alinco DR-570T. First I ordered it giving my credit card. I told
them the radio was over five years out of production and the mic had to
be special ordered from Alinco. Again, no problem. Three weeks pass and
no mic. I call AES. They have no record of my order. I call the salesman
who I ordered it from. He says "all special order products have to paid
upfront by checks that clear. NO credit cards are accepted!"
Why was I not told that upfront. Why did that same salesman take my
credit card after I told him the mic had to come from Alinco since the
radio has been out of production for at least 5-6 years. I will never
buy anything again from AES.

4230. Alinco DX-70TH ????

I currently have two of these,TM-742. I love the radios and they have a few extra features like the remote control function in crossband from a TH-79. With that ht in the remote mode all remote functios are just one button activation. It will do crossband repeat in any combination. I saw that you could do double crossband from one band to the two others but don't know how. Anyway I like my two and btw I bought both of them from this news group.

Have fun 73

Hello,

If you're interested in getting CNC Control for machine tools in your own shop....

...and you've got some extra test equipment laying about...

...then this might be perfect for both of us!

I'm slightly nutty about electronic test equipment. I love restoring it, and using it. Coincidentally, it also helps in my work of designing CNC control products for Ah-ha!. I'm also shopping for our Director of Operations, he's trying to get a couple things for his home shop too.

I'd be very open to arranging a trade of Pro-CNC, Artisan-CNC, or even a complete control system, depending on the value of the deal.

I will also pay cash if the price is right.

Complete info on the CNC controls is available at the web page listed in sig below. The web page will be moving to another ISP on Jan 1 1997. Probably will be available as ahha.com.

I'm currently interested in the following for my lab:

-Decent Universal Counters (like freq cntr but with ratio, period, etc.) Need 2-3 pieces. HP5335A, 5328A, etc..

-Current Probes, specifically Tek A6302 with AM503 amp, or equivalent.

-Tek TM500 plugins, like FG504 or 50x, SG50x, DC510 509 etc., TG501, etc..

-Decent Function Generators, prefer >10mhz with lin/log sweep, but will consider others. Need 2-3 pcs.

-Good general purpose RF gen, like HP8640B, Boonton 102, 103, etc..

-Finally, I've been restoring Tek scopes for fun for about 20 yrs now, so just about any Tektronix item is of interest to me. Plugins, probes, manuals, scope carts, or entire scopes.

If you've got stuff you don't need, but you -do- need CNC, let me know!

Thanks,

Richard

ICOM's service turn time is at 5 business days now. The only troubles with the 900 was when someone with welders torch would attempt to do the out of band modification and botch the job. The matrix diodes are in the control head. Make sure you have solid power applied to both interfaces, possiable problem in the control cable between the control head and interface A. Guard the OPC-179 connection cables for the band units with your life, as ICOM is totally out of them and they are gone forever. The UX-49 had a problem with the PL tone encode where it would drop out just after you key the radio, this would cause you drop out of repeaters on UHF ICOM does have a modification for the UX-49. You can purchase the parts and get a copy of the modification from them.

ICOM's service is $75.00 per hour plus parts and return shipping with one hour minimum also as of December 1, 1996 now charging a $ 45.00 NON refundable up front estimate fee should you desire an estimate of cost of repairs. The $ 45.00 is applied to the repair should you elect to have it done. If you refuse, ICOM keeps the $ 45.00 as there is a cost to time spent working up an estimate and associated paper work that goes with logging in a service radio.

Call Communications Specilists in Orange, CA and order the SS-32-SMP tone encoder. You will need to install some dip switches so you can externally adjust the CTCSS tone setting. The SS-32-SMP works great in the IC-2AT. Comm Spec also has an install application note.

If you bought with a credit card that has buyer protection programs in place I would report the situation to them and ask for assistance in the matter. They will most likely ask you to return the product to the store and to pay the restocking fee in prostest. Amex will in most cases credit your account immediatly and will investigate the matter fully. I have on two occasions return products that I was displeased with and have been able to prevail in not only recovering the restocking fee but in the return shipping fees.

If you bought with CASH, check or COD then you are 100% bound to the merchants policy.

Good luck!

I believe Ungar made the RS soldering irons. The base of the heating
element is in fact the same as a 110v xmas bulb. Makes a handy drop
light in a pinch. The tip I believe was a 1/4"-20 thread.

Check Mouser, MCM, etc. I known I've seen replacement tips that would
work.

-Chris

Without a doubt it will be the new Icom 756. It is probably better to get one rig for both bands, unless you like to monitor 50.125 24 hours a day hoping for a band opening. Then you would need two rigs. I have a Kenwood TS690 that has hf plus 50 watts on six meters. It is a very nice rig that you can find used for about $1000. The Alinco DX70 is also a nice rig with 100 watts on six meters for about $980 new from AES, though it is a mobile size radio. The new Icom rig is not available yet, nor has a price been published. My guess is that it will be a very affordable (per Icom ad) $2500 or so. Good luck.

I ended up replacing my RS iron with a hakco solder station. :) Of
course my RS iron was usally the 6 dollar type. :) Know the one your
talking about, haven't seen one in years. I'd pickup a weller or
something. They'll last for years.

4250. ICOM IC32at parts and accessories wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-08 00:00:00 UTC
From: QLKB39A@prodigy.com
Message-ID: <58dfqf$2hhk@usenetw1.news.prodigy.com>
Source record: 189050

I recently bought an IC32at and just got the bare radio and antenna. I am interested in finding a belt clip, wrist strap, soft case, or any other accessories you might have for this radio.

I would also like to get an original manual/box/packaging or other stuff for this model.

Please email me at QLKB39A@PRODIGY.COM with any information you might have.

Thanks.

Mike Ward - WD4SGU - QLKB39A@prodigy.com

4251. WTB power supply for Heathkit Cheyenne MT-1 tube xmtr

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-08 00:00:00 UTC
From: moo@midtown.net
Message-ID: <moo-2708561256230001@sl8.midtown.net>
Source record: 189051

I recently bought an old Heathkit Cheyenne (model MT-1) tube transmitter for hams, and I plan on restoring it. It's missing the mobile power supply, however. I need a power supply that runs off 12 volts input and puts out 300 volts at 50 milliamps AND 600 volts at 110 milliamps for the 6146 final amp tube. Must have either a 6 pin Jones socket or be connectable to a 6 pin Jones socket (I can get the socket locally if I have to) for output, and probably should have pos/neg alligator clips so it can be hooked directly to a car battery. Mail moo@midtown.net.

He probably connects via a news<->http gateway, so he tries to
alert the one managing the gateway to control news as well.
Some people don't know a network from a nitwit, but insist that
the site where they get their news play police for news. They
can't grasp the concept of distributed computing, globally
networked newsfeeds, unmoderated newsgroups, free speech,
injuring themselves without claiming gazillions of $$$ from
the manufacturer (they didn't put that on the warning label,
so I loaded my pistol and began hammering a nail into the
wall with it, then it went off and the bullet hit my foot).

Obvious trolls have been here for ages, they eventually go
away when everybody ignores them.

ObRRAE:
Has anybody got the schematics for the "starfleet communicator"
that appeared in 73 around 1977? I saw it mentioned somewhere
as a 10GHz rig and was wondering about it.

In article <32A9EE73.C05@awod.com>, ksprouse@awod.com says...

^I have two different Heil Microphones that I have tried using with both
^of my ICOM 706 radios utilizing the VOX circuit. I seems that I can
^hardly get more that 2 syllables spoken before the transmit relay drops
^out. I have adjusted the VOX gain to MAX and the ANTI-VOX to MIN, with
^a vox delay as high as 1.5 seconds. If I use an ICOM microphone the
^problem is not present. I believe this to be due to the presence of a
^preamp circuit on the ICOM mike as opposed to the HEIL microphone. I
^would like very much to use these expensive microphones for their
^convenience but without VOX they are of little value to me. Does
^anybody have any suggestions...I have been unsuccessful with questioning
^both ICOM and HEIL.
^Thanks and 73,
^Kellan Sprouse
^AD4QE

You may not like this as a fix, but you can use the external keying function
with a footswitch and manually key the radio with your foot, allowing you to
still keep your hands free.

I Have one Zetron Model 810 Digital Hybrid for sale. This is a 2-Wire to 4-wire converter with digital signal processing. It typically is used to connect a standard telephone line to a mobile radio system. It will enhance the audio (especially full-duplex) in trunking, conventional and cellular radio systems.

This unit is in excellent condition. It was in-service for less than a year.

Rack-mount (about 2" high). With Instructions.

Originally purchased for $900. Will sell for $600 OR BEST OFFER.

email: kgold@telerama.lm.com

Cross-posted to: alt.forsale,sci.electronics.components,misc.industry.electronics.marketplace,,rec.radio.amateur.equipment,sci.electronics.repair,sci.electronics.equipment,us.forsale.misc

I have TWO Zetron Model 50 DID Telephone Trunk Converters for sale.

These both are in BRAND NEW CONDITION. They were in use for less than a year.

A DID (direct inward dial) line allows each mobile radio or pager to be reached at a unique, seven-digit telephone number, just as in cellular service. A caller doesn't have to overdial extra codes in order to reach a radio or pager.

They were designed to be used with a Zetron Model 45B (Z-Patch), 46 (Trunked Interconnect) or Model 48B (Repeater Manager) but will work with ANY DID installation.

Rack-mount. All manuals included.

This allows each subscriber to have his own unique telephone number!

Original price was $1,000 each. Willing to sell for $1200 for both or $700 each -- OR BEST OFFER.

email: kgold@telerama.lm.com

1) DECADE RESISTANCE BOXES FOR SALE - MODEL 63

Description:
The Model 63 Precision Decade makes possible the selection of any resistance valule from 1 ohm to 9999 ohm in 1 ohm steps. The resistor elements are housed in a sealed bakelite box and are non inductively wound on procelaine tubes. This unit is suitable for use in electrical measurements, substitution resistor's to aid in designing and for experimentation in schools and research institutes. Ranges 0-9x units, tens, hundreds, thousand ohms. Precision .1% resistor elements. Manufactured by Brunelle Instruments Inc. Price $29.00 each (Qty only 24 on hand) Manufacturing overrun (NEW).

2) Model 1030 REGULATED POWER SUPPLY

DESCRIPTION:
The Model 1030 is 0-18V,0-3A, adjustable, dual meters. Regulation 01%. These are Top Quality Power Supplies (NOT CLUNKERS) Mfg by Instek. $189.00 (NEW)

3) Model 3060 PULSE GENERATOR

Description:
Can be used with an Oscilloscope ;for adjustable sweep delaly, TTL/CMOS LEVEL (output adjustable) built in Logic Tester, Pulse period range of 100 nS to 0.1 S. Frequency ranges 0.5 Hz to 5Mhz. Operating modes: Run, Trigger, Gate, One Shoot, Square, Invert. Mfg by Instek. $159.00 (NEW)

If interested send address or fax no for complete spec sheets.

>I am thinking of buying an IC-T22 2-meter handheld. Any comments?
> Thanks, Alan KJ6AS
I've had one since May 1996 with reasonable results. I've since added the HM-53 mic, cp-12 DC adapter, and bought an extra battery. There have been no failures or glitches. The only thing I might do differently is opt for the IC-7T to include 440 Mhz at about $100 more.

I've checked the transmitter into a Bird load and it makes its rated power plus a little more. The HT will get very hot on extended transmit. I got too nervous holding the key down over 45 seconds at 13.8 VDC input and 5.5 watts out. I believe hot ht's on extended transmit is typical for most HT's. It never gets more than warm though under my normal operation.

The receive audio for such a small speaker is very good and transmit audio reports are good. I think the design of the HT fits my hand and pocket quite well. Memory channels can be expanded to 80 if you don't use the alphanumeric channel display. When my wife got her license I put her callsign in the display's sign-on message. This is a nice vanity touch!

One irritation: I see these advertised as AM aircraft receive ready "by a simple keypad modification". I can't find anyone including my dealer who knows how to do this! I've got a scanner for these freqs that I never listen to so I shouldn't care.

I've not had to deal with ICOM so I can't comment on correcting any service problems that might occur though others gripe about slow service.

>Any help would be greatly appreciated. Thanks, Alan KJ6AS
Wow, that was quick! I just wrote a reply to your previous post
extolling the virtues of the T-22.

I remember this feature! However it will program above MR10. Page 17
of the manual does allow channels to 40 if you use alphanumerics or 80
channels with just frequencies displyed. I use 80 channels.

1. set data for the desired channel in VFO mode....frequency, offset,
power level, CTCSS etc.

2. Push and hold the function button...while holding the function
button press the MW/MR button quickly and verify that the MR
display icon is flashing....while still holding the function button
you can rotate the DIAL switch to select the MR channel to write
the VFO information into.

3. You're still pushing the function button...push and hold the MW
(memory write) button for about 1 second. The radio beeps twice
quickly and the VFO information is written to the MR channel.
Now you can let go of the function button!

Now that I remember this, I seriously was thinking I had a defective
unit. I fooled around with it for quite soem time before the
procedure was clear.

Hi Joel--

I have a Standard C108A. The receiver is very sensitive and well-behaved across its entire tuning range. The transmitter has excellent audio (albeit low power). Gotta say, it's the most fun I've had with an HT in a long time! On the basis of this rig, I'd recommend Standard. However, I'd also recommend looking up QST's comparative reviews for the particular radio you want--the technical performance numbers may be helpful.

Having done the receiver opening modification, do you find your W32A
is more intermod prone? My W31A seems to be very poor at rejecting
intermod and the sensitivity is less than I had expected. Perhaps I
should trade it in on the newer model?

Wattmeter is an external one. The Clipperton-L doesn't have a
built in wattmeter. The load and wattmeter have been tested
against another amplifier hooked to the same, they are fine.
Whats so strange about this amp is that it draws so much darn
plate current. I did have another amateur respond that his
Clipperton-L also drew a lot of plate current. What I'm worried
about is taking out the power supply. Ideas? Thanks again,
Mike... WQ0N

Same here...an excellant rig...all bands all modes! Used it for the first
time on 6 meters AM on an old-timers net working HA-460's and Gonsets! Great
reports!

73,

Tim N1BTQ

> can confirm or deny this please get back to me.

Hi, that's the deal, CTCSS tones are set via a DIP switch.I can get by
on this with most of my local 6M repeaters on the same tone, but plan
on adding an external connection to a ComSpec encoder when the sun spots
come back. I just got my DX-70 yesterday, seems to be a great little
radio, and a lot cheaper than an IC-706... When CPU moded as per Oakland
mod data base, the radio tunes from 35 KHz - 35 MHz and 45 - 60 MHz

Source record: 189214

Hi, just want to pass on a few findings/impressions of the new Alinco DJ-41 mini UHF HT that I got at HRO the other day. For only $135, it's a great beginners radio. Has 2o memories, and 350 mw transmit power.It's flip-up duck antenna is convenient.Does have provissions for external speaker/mic and 5.5 volt DC power. Normal power is from 3x AA batteries. I think that it requiers a drop-in charger for using Nicads, but I'll check on that and it might be fixable...It's biggest limitation is that it only has CTCSS encode,although I may work on fixing that too.

The squelch is set by an internal trim pot, mine seened to be a little too close to threshold. From studying the schematic, I also noticed that it seems to have the capability to be computer programmed and or cloned.(via a connection through the mic. jack). I'll need to see if Alinco plans on supporting any software for it. In checking with Alinco a few weeks back, a service manual should be available for the S41 in another month or two. This will help in mod R&Ding. If you havn't heard, Alinco has a very similar version of the S41 that will be marketed for the new FRS service. It is still pending on Type Acceptance and may be available by xmas.

Now the fun stuff: As the radio comes out of the box, it only tunes from 420 - 450 MHz. A very simple mod that we devised cures this.Simply remove the back cover(requires removal of 7 screws,4 in the battery compartment, 3 near the top). With the radio face down, look over on the far left edge of the CPU PC board. About half way down you will see a zero ohm chip jumper(it's the only component over there). Simply remove this jumper, and reassemble the back cover. The radio now will program from 400 - 500 MHz!!! Although the actual PLL lock range seems to be about from 425 - 490 MHz. It seems to have decent receive sensitivity up through 465 MHz. Enjoy 73's DE WA1YKL

Note, cute bit O' irony in that we got this little wonder and developed the mod for it on 12/7.....and that the mod was centered in the removal of a "zero".... No big, deal just cute... Hey, it beats flamming.

> segments.
> Thanks for any help.
>
> 73 Mike K6YPBWhile I like to design and build my own gear, you might consider the offerings of the following companies (might not be totally accurate, this is from memory...)
Transverter kit: Down East Microwave (DEM)
Transverters: DEM and SSB Electronics USA
Transverter to HF/VHF rig interfaces: DEM
Transceivers: Icom IC-970 with special ordered module (I'm not sure if this covers the 2.3 GHz part of the band). There are also NBFM boxes made for the Japanese market.
Antennas: Directive Systems (DEM is a dealer), Myers Communications MC)M^2.
Amps: DEM, SSB Electronics,Hi-Spec
Satellite Receive Converters: DEM, MC, SSB
There will probably a lot of 2.4 GHz stuff once Phase 3D is operational--but I think a lot of manufacturers are waiting to make sure they won't lose their shirts making stuff now.

For building your own, the Dec 92 QST has a transverter design by Jim Davey that was updated by Steve Kostro in the 96 Microwave Update (new MMICs). This Microwave Update includes a nice series by Paul Wade on how to properly feed dish antennas.
--Zack W1VT zlau@arrl.org

BTW, you might research the back issues of ATV Quarterly for useful ATV info--I think its still owned by Henry Ruh KB9FO.

4318. Q: Dead zone in Zenith A600 tuning range

Hello and thanks for reading.
I have a Zenith TO A-600, and it hears well on 31m, until I get to the right side of the dial when things get very quiet....until I put my hand *near* the aerial, which enhances reception 100%. Actually touching the aerial raises the noise floor big-time.
Any suggestions appreciated.
Kind regards
Harry

I have a IC-900 that I have used for many years with no problems
except for one that nearly drove me bats. Make sure that the
middle connector in the mike cable to the A unit is NOT touching
something that is grounded. Instant audio problems if it is.
For the jumping problem, make sure that the fiber cable is properly
inserted at both ends. Hope this helps.

Source record: 188780

I am selling one ICOM IC-2SRA, some specs:
2M HT with dual scanner
Scanner Freq range is 25-950Mhz with no blocks.
62 memory channels in scanner.
Seperate antennas, I only have the xmit ant.
BP-84 Battery, 7.2V@1200mAh (expensive battery)
Wall charger
DC jack doubles as a charge jack
I don't know the scan but it is as fast as most scanners.
Capable of FM, WFM, AM on any frequency in scanner
HT: DTMF pager & code, CTCSS encode & decode, 32 memory channels.

Price: $300

I would like to get in touch with anyone well acquainted with the Midland 77-117. This is a CB transceiver that also receives VHF weather channels. Specific questions I am seeking answers to are:

1. Do the CB and WX receivers share a common IF? Just how much circuitry do the two have in common?

2. Does anyone have a schematic handy? Is one included with the manual?

3. How well does the receiver perform, both at HF and VHF? Specs?

TIA, -SEP

> and Xtal controlled oscillator (all in one small shielded box) to do
> the work! This IS rather specific, but it will obviously work with
> any other 73.62 IF. Not sure what the other Yaesu's or the MP has.

More Snips -

The brochure for the 'MP lists the following IF's:

Main RX: 70.455 MHz, 8.215 MHz, 455 kHz, and 10.24 kHz (EDSP)
Sub RX: 47.21 MHz, 455 kHz

The 8.215 MHz 2nd IF is common between the two Yaesu radios, and is much closer to the 8.83 MHz 2nd IF of the Kenwood radios - cannot this one be used (I am NO expert!)?

The idea is attractive! I'll send out a "count me in" message.

>explaining class C versus class AB amplificationd.
>thank you,

Simple.
Since AB covers a wide range (between 180 degrees of conduction, which is
class B, and 360 degrees, which is class A), the 1 and 2 are simply to
designate whether or not driving current (tube-speak: grid current) is drawn.
If AB1, no grid current drawn. This is the same as "zero drive power
required", since if P=i*E, and i=0, then P=0.
If AB2, grid current drawn.

"There is no need to sally forth, for it remains true that those things
which make us human are, curiously enough, always close at hand. Resolve,
then, that on this very ground, with small flags waving and tiny blasts of
tiny trumpets, we shall meet the enemy, and not only may he be ours,
HE MAY BE US."

What are the ham resources in the silicon valley?
Clubs? Web pages? Swap meets?

I'm in the market for my first 2m HT.

4339. Wanted:Portable Power Packs

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-09 00:00:00 UTC
From: scantron@flex.net
Message-ID: <58h6p6$l0q@cub.flex.net>
Source record: 188797

I&#65533;m looking for the source of a product called a &#65533;Portable Power Pack&#65533; . This is an integrated battery, charging circuit and meter encased in a plastic housing with a moulded handle on the top. The unit can be charged from a car cigar adapter and an office power. 12VDC output is via terminals and a cigar adapter type socket.

If anyone can point me to a source of these units, I&#65533;d be grateful.

Thanks.

4340. Help with TS930S/AT

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-09 00:00:00 UTC
From: Larry Tucker <sts@ac.net>
Message-ID: <32AD0B51.57A3@ac.net>
Source record: 188798

Hello,
Name here is Larry. I have a TS930 with the following problem:

On warmup the set will lose RF sensitivity with a 20 over sig going to
S2 or less. Keying the mic will bring it back. After playing for
around 20 minutes all is fine. I v
have solved many jproblems by repairing the vias on the Digitial PCB.

Any ideas?

Tnx Larry, N4KVP sts@ac.net

> > anyone have any comments about the Motorolas? Will these two radios
> > work together alright?

The MX340ï¿½S version is synthesised and the PROM or EEPROM codeplugs are difficult to find (that's why you see these radios for $25-$100 at a hamfest). If you purchase the S version make sure you also have codeplugs and an R1800 available to burn them on. Crystals for the channel element versions can be found from several sources. The MX-300 series are excellent radios.

Hi Kellan, You are correct on the need for a preamp with Icom radio's.

Bob Heil offered a schemeatic diagram for a small preamp which you
could build for use with his mic's and the Icom transceivers. I used
one on my IC-751A for a while. It provided the necessary amplification
for use with a heil (or any other non-amplified) microphone. I built
one...and later took apart an old Icom hand mic and used the preamp out
of it for a heil boom headset.

Works fine.

Hi,
Could someone please enlighten me on the difference between
Class AB1 and Class AB2 Amplification? Perhaps a laymans'
description and examples of when to use one or the other as
applicable to Amateur service.

My 1978 borrowed and tattered copy of "ARRL The Radio Amateur's
Handbook" does not go into much detail. FWIW, it does do a fine job
explaining class C versus class AB amplificationd.
thank you,

Hello and thanks for reading my message....

I have some problems with my TS-930, the antenna tuner doesn't work properly. After 2 tunings he doesn't want to tune anymore, it's just like the tuner is not reseted after a few tunings.

And when I push the PTT, the led AT-tune isn't lighted anymore, so he even don't check the SWR anymore..

Did anyone had the same problem, of if you could give me some advice please mail me.

Franky

4354. CW-N Filter Adaption ??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-09 00:00:00 UTC
From: l38217@alfa.ist.utl.pt
Message-ID: <58h2dm$ibl@ci.ist.utl.pt>
Source record: 188989

Hello !
I have an Icom transceiver, IC-725, and I just bought a CW-N
250Hz filter. The problem is that the filter I got is the FL-63
and not the FL-101 that is recomended on the manual !!
The caracteristics of the filter are the same (same freq and
also 250Hz/-6dB).
The enclosure of the filter is a litle different so the pins don't
fit in the socket. I have already made an adaptor so it can be
pluged in.
The big question is WILL THE FL-63 WORK AS WELL AS THE FL-101 ??

Thank you !

To enable AM aircraft receive:

Hold down # key, Mr/B key, and function key at the same time and turn power on. Wait about two seconds and you are good to go. You can also now go into the set mode and change the PL setting to 100 which will give you full frequency input (i.e. all digits must be input). I find the latter feature very helpful in flipping between the ham bands and the aircraft band.

My T22 is very hot on the airband following this keyboard modification. Let me know if you have problems. 73, Dave AA5NU

4365. Transceiver recommendation wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-09 00:00:00 UTC
From: colvin@hyrax.rand.org
Message-ID: <colvin-0912960939280001@colvin.rand.org>
Source record: 189000
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi, I'm looking for a used HF transceiver with the following attributes:

1) 10-160 meters AM, CW, SSB
2) solid state
3) digital frequency display
4) 100 Watts or less
5) has to be able to run on 12 VDC, but I am *not* interested in anything designed as a mobile unit

6) ~$400 (If this is unrealistic- and I have a hunch it might be- please let me know)

I'm still in the information-gathering mode, so I'll appreciate any recommendations. I intend this to be my first rig if I get my license.

Thanks in advance, Tim

Source record: 189001

Scott
R390's can be worth anywere from 50.00 - 400.00 depending on its overall shape.
There is a lot of variables involved ie: PTO Runout,Mods ....
Overall they are great radios,this radio was probably made in the late 50's
early 60's. Do a search on the web for BOATANCHORS or you can try
http://www.islandnet.com/~dma/Boatanchors/ This will get you started
Good Luck

4367. FT 50 Unmodifiable?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-09 00:00:00 UTC
From: scannaman@aol.com
Message-ID: <19961209175901.MAA17591@ladder01.news.aol.com>
Source record: 189002

Has anyone heard of all these mods not working on newer(as in last few weeks) models of the FT 50?? I have heard of 2 people who have bought them and they claim that the extended tx mod didnt work on their radios, I have not personally viewed them yet and think they might have some how screwed up on the mod. Just wondering if anyone heard anything, though....Scannaman@AOL

All equipment listed below was purchased New by me within the last 8 months. I am pricing and listing info from memory only. I will update this list later with presice information later or upon request.

1). Icom 2710 with both optional modules installed (modules cost 129.00) Expaned rec. Total Cost new around $830.00, make offer!

2). Simplex Autopatch don't remember manufacturer, will post later (Top of the line module) Cost new around $450.00, make offer!

3). Diamond S/W power meter Cost new around $120.00, make offer!

4). Antenna Rotor & Controller. Cost new around $100.00, make offer!

5). 4 way 25 pin A,B,C,D switch. Cost new around $45.00, make offer!

6). RF Concepts 170 watt 2meter amp/pre-amp. Cost New around $400.00, make offer!

7). RF Concepts 100 watt .70 centimeter amp/pre-amp. Cost New around $400.00, make offer!

8). Two Icom Z1A's. All mods except 800 rec mod done, (Have transistors and intructions for 800 mod). Cost New around 350.00 each. Make offer!

9). Two Mirage BD35 144/440 amps. Cost new around 200.00 each. Make offer!

10). Two Astron Power Supplies with guages, 35 amp & 25 amp. Make offer!

11). Pyrimid 8amp Power supply. Cost around $45.00 new. Make offer!

12). Maxrad mobile 144/440 mag mount antenna. Cost around $70.00 new. Make offer!

13). Crushcraft 144/440 omni directional antenna. Make offer!

14). Crushcraft 144/440 beam antenna. Make offer!

15). About 80ft of 8313 (I believe) Coax Cable.

4372. REMOTE COAXIAL SWITCHING INFO!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-09 00:00:00 UTC
From: kovar@zeus.ia.net
Message-ID: <58hlu1$lci@hera.ia.net>
Source record: 189007

I have some older coaxial two position switching boxes.

BRAND NAME OF SYSTEM:Inline Instruments Inc. TYPE 105

COUPLER AND SWITCH.

I need help finding/ understanding replacement parts for it.

The DC switching voltage is applied to Coax at radio end.

The DC is isolated from antenna and radio with capacitors at each

end.

The DC 12vdc power supply is isolated from RF by A COIL in coupler.

A SPECIAL COIL!

Keep in mind this COIL must isolate a range of frequencies from

1.5 to 180 mhz and stay high impedance threw range.

Mine has taken to much current or lighting strike.

This COIL is a possible PIE COIL?

It has what looks like three donuts on a air tube form.

I assume this series multipul coil arrangement helps break up

resonant possibilites, unlike a single coil?

WHAT IS THIS COIL AND HOW DO I FIND ONE?

WHAT WOULD BE IT'S VALUE AND CURRENT RATING.

Paperwork of defunked company rates power of system at 1250 watts CW.

2500watts PEP.

Thanks for interest in helping,

Jack Kovar
K0VAR

Hi folks,

Are there any mods available for the Heathkit SB1000 Linear? I am just about to put an original kit together and before I do I'd be interested in alterations ie use on 6m by dropping out say 160m, alternative taps on the pi network coil for 17m and 12m operation without compromising 15m and 10m too much, electronic bias switching etc. Any known hiccups with the linear to be aware of?

Many thanks

Duncan

> the only way to get rid of it is to save something else in it's place.

Actually, you can "hide" memory locations. This, in essence, disables
the memory location but is restorable if you don't overwrite that
location. Scanning does not see this location nor does any "normal"
function of the radio and this is a bit different from setting the
SCAN SKIP.

To disable a memory location, press and hold <FM> until the number
in the memory box blinks. Use the dial or arrow keys to select
the memory location you wish disabled and press <MR>. The memory
box should now display 1 and show its contents. I don't believe
that memory location #1 can be disabled. Nope, just tried to and
it didn't work.

Alas, there is no way to delete a memory location and have the
others move up one location automagically.

Has anyone built the Ramsey 440 MHz transciever, and used it successfully for 9600 baud packet operation? Did it work as advertised, or are there mods necessary to get it to work? Their catalog says "9600 - no problem". Does that mean "works fine, no problem" or "no problem, not a chance"? Anyone use one of these as the basis for a repeater? Can you use the Tx and Rx side at the same time? I suspect that the synthesizer can only handle one side at a time, but I've never even seen one of these rigs. Anybody?

Thanks,
Ed Burress

There have been some service bulletins on varrious modules, If I rememeber right
the UX-49 has some changes to get the PLL to lock up faster when using PL.
Mine has been good for last 10 years, although the display illumination
has been replaced twice.

>Does anyone have any input on the Ten-Tec 2 meter FM Transceiver that you
>assemble from a kit?

It is a good kit. If you want to build a kit radio, this is the one
to buy. But it is a pretty plain radio. If you want the most bang for
the buck, you'll go another way. There are two alternates. You can
retune commercial surplus radios. This gives you a very high performance
radio at a very low cost. Of course it will have even less features
and frills than the Ten-Tec. Or you can buy a Japanese radio. There
are several in approximately the Ten-Tec price range, and they offer
many more features and frills. A very few of them even offer better
performance than the Ten-Tec kit.

>Also, I am wanting to get into packet, and I notice that this rig has a
>1200 baud packet-ready din on the rear. Being in computers, I am use to
>28.8, 56k, etc. Is 1200 baud useable, does packet go any faster?

1200 baud is *barely* usable. It depends on your temperment and what
you want to do. For unattended Email forwarding, it is Ok. But for
many interactive uses it is intolerably slow. Unfortunately, it
represents the lowest common denominator among amateurs, so you'll
find yourself limited in the number of stations you can contact if
you get something faster. It will work through any voice grade FM
radio without modification. Having the jack on the back is a
convienence, but not a necessity. You can just hook a 1200 baud
modem to microphone and speaker connections instead.

Faster packet does exist. As a matter of fact, I was easedropping
on a couple of our 56 kb LAN users this afternoon while they were
exchanging live realtime digital video with CuCme. You can't do fast
packet with a voice grade FM radio anyway, you need a real RF modem
like the GRAPES modem, so you shouldn't let that drive your voice
radio choice.

OTOH, there is 9.6 kb packet. This *can* work through some, a
very few, voice grade radios, and many amateurs try. But most
of the so-called "9600 baud ready" voice radios are *not* in fact
suitable for 9600 baud operation. They have a connector labeled
"9600 baud", and advertising hype claiming they will work, but
they don't, and generally *can't* work properly at 9600 baud.
This is because of the way modulation is introduced into the
synthesizer loop. Again, a dedicated data radio, like the
inexpensive Tekk KS900, is the proper way to go, so don't let

this drive your voice radio choice either.

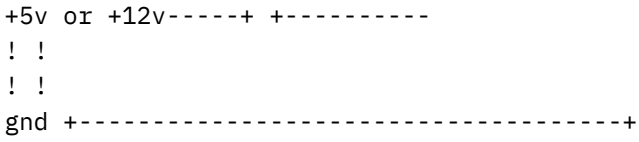
I'm trying to come up with a method of controlling the power to some equipment.
I've experimented with capacitors and relays, but can't come up with something
that is as dependable at 35 farenheit as in 120 farenheit (i.e. winter
overnight to summer mid-day) - it's for a mobile application.
I could use a 555 driving 3 "D" type flip flops, or some firmware in a
PIC processor, but I was thinking that there has to be a simple way that
I'm overlooking.... Maybe I've been at this stuff too long...

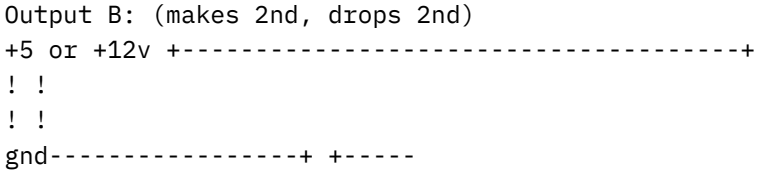
Heres the requirements - I suggest that you use a monospaced font
(like Courier) to view this timing diagram. The timing resolution that
I need is about 1/4 to 1/2 second between signal rises and drops (it's
not that critical), and current handling of under 500ma per output. I
have circuitry that will handle everything but the actual sequencing.

The control signal:

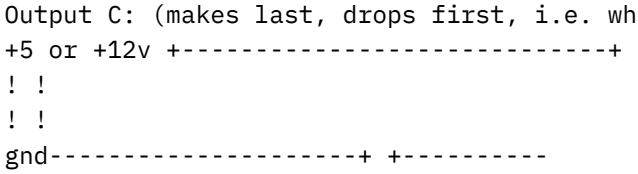


Output A: (makes first, drops last)

Output B: (makes 2nd, drops 2nd)



Output C: (makes last, drops first, i.e. when the control signal goes inactive)



Anyway, any help will be much appreciated.

Welcome to a wonderful hobby.

I suggest you buy a 2 meter HT that has features YOU can understand. Every brand of radio has its own concept of how a radio should work. Only you can determine which one operates most like you think. Then get on the air. Also as someone else said, look for local ham clubs. Don't be surprized if you find that at one club many members are enthusiastic about brand X; and at club two the members are equally passionate about brand Y.

You will now get a lot of suggestions. After a while, you may have enough info to give you a valid reason to spend more $$ one more features.

Ham radios tend to hold their value very well. So if you spend, say $300 on an HT, you should be able to get at least $200 back a year later. [I am sure the net readers will have a lot of varying ideas on the exact percentage.]

BTW, don't over look Radio Shack for a radio as a possible first HT. They don't have all the features of some others, but that makes them easier to use. Furthermore, virtually all the big brands design one radio for hams, police, public service, etc, etc. then program them to tune different frequency ranges. This is great if you like to use the radio as a scanner and pick up the weather forecasts. However in a metropolitan area, like Chicago, some HTs are prone to overload from transmitters not in the ham band. RS HTs are tuned for the ham band only, which might be a good thing.

Disclaimer: I don't own a Radio Shack HT, but 2 Kenwoods, a Yaesu, and a Standard; all one band models. Sometimes I wish I had made my most recent purchase an ICOM because the buttons are easier to read, but there are conveneinces in working closely with some locals you also have the same model I have.

Remember this is a hobby so make learning about the models and features fun.

73, Paul

Hi,
My 20 watt transceiver has a burned out transformer . To purchase one new
it will cost me quite a few dollars.
Is there anyone in the Sydney area that could fix it for me......or is
willing to sell me a second hand cheap unit (as spares).

Please mail me at

conn@magna.com.au

Thanks in advance

Greetings,
I am trying to get a list of some of the two meter all mode radios that are currently on the market, new and used. (I hope to compile this list on a www page later.)

If you have some time, please send any brands as well as model numbers that you might know.

ex.. Kenwood:
TR9130 25W
TR9000 10W

Icom
..
etc..

4427. Value of old vacuum tubes

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-10 00:00:00 UTC
From: jnichols@cais.com
Message-ID: <58k17a$k1i@dub-news-svc-7.compuserve.com>
Source record: 188827

My father, who passed away last year, was an electronics hobbyist for many years. In cleaning out his old equipment, I have found around 60 or 70 vacuum tubes. I am compiling an inventory of them. Many are still in the box, so I presume they are unused, although I really have no way to know about the condition of any of these. I am trying to find out if they could be of value to anyone, and how much something like these might be worth if sold. The money, of course, will be for my Mom. If anyone can help, including giving me a hint who might buy such things, I would be very grateful. Thanks. John Nicholson, Satellite Beach, Florida, email 104560.262@compuserve.com

I had these problems with NEW AES equipment...

I bought a Uniden BC890XLT scanner soon after it
came out. Terrible intermod with anything longer
than a stubby duck on it's rear jack. A vitually
useless scanner. I complained about it being totally
unacceptable for the price paid.

I still had to pay the restocking fee.

AES is a nice store so long as the manufacturer
isn't selling a lemon.

On the plus side, I did buy an Alinco DR600 dual-band
mobile from them. It had DTMF decode problems. They
eventually traced the problem to the main CPU board.
I was given a new, unopened unit.

I have the Alinco DR605. A nice little radio.
An alphanumeric display would have been nice, as
would three separate power levels rather than
two (5 or 50W), but you have to cut some corners
for a low price. But it works well and handles
1200 baud packet just fine. I'm using it as a
base rig connected to a small Cushcraft AR270
dual-band vertical.

However, the new Yasesu FT8000 is, I think, only
50 to 75 bucks more and may be worth considering.

I once had an Alinco DR600. A very good radio as far
as RF capabilities but a totally crappy user-interface
and front panel design. The DR605 is much improved.

All equipment listed below was purchased New by me within the last 8 months. I have listed the price I paid and I am asking seventy-five cents on the dollar. You pay shipping & handling. The reason I'm selling is that I am starting a New expensive hobby and the boss says I can't have two expensive hobbies at the same time!

1). Icom 2710 with both optional modules installed.
UT-66 Voice synthesizer Cost $66.00
UT-84 Tone squelch Unit Cost $88.00
Expaned trans/receive mod done.
Paid - $854.00 Asking - $640.00

2). CSI CS900 Simplex Interconnect (Autopatch)
Paid - $360.00 Asking - $270.00

3). Diamond S/W power Power meter SX-400
Paid - $130.00 Asking - $97.50

4). Philips Antenna Rotor & Controller with Thrust bearing.
Paid - $90.00 Asking - $67.50

5). 4 way 25 pin A,B,C,D switch. Cost new around $45.00, make offer!
Paid - $45.00 Asking - $33.75

6). RF Concepts 2-meter Max-Amp-45 45/150
Paid - $290.00 Asking - $217.50

7). RF Concepts .70 centimeter 4-310-45 30/100
Paid - $340.00 Asking - $255.00

8). Two Icom Z1A's. All mods except 800 rec mod done, (Have transistors and intructions for 800 mod).
Paid - $355.00 ea. Asking - $266.25 ea.

9). Two Mirage BD35 144/440 amps.
Paid - $180.00 Asking - $135.00

10). Astron Power Supply with meter RS35M
Paid - $170.00 Asking - $127.50

11). Astron Power Supply RS20A
Paid - $100.00 Asking - $75.50

12). Pyrimid 8amp Power supply.
Paid - $46.00 Asking - $34.50

13). Maxrad mobile 144/440 mag mount antenna.
Paid - $70.00 Asking - $49.00

14). Crushcraft AR270B 144/440 omni directional base antenna
Paid - $100.00 Asking - $75.00

15). Crushcraft A270-10S 144/440 beam antenna.
Paid - $80.00 Asking - $60.00

16). Three Diamond 144/440 duplexers
Paid - $55.00 ea. Asking - $41.25

17). (PURCHASED USED) Kenwood 4100A
Paid - $200.00 Asking - $150.00

4438. FT50R CWID feature

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-10 00:00:00 UTC
From: hbcsc274@huey.csun.edu
Message-ID: <58k4ra$eh4@csun2.csun.edu>
Source record: 188938

I just got my FT50R and was playing around with it yesterday. I found a feature that will do a CW ID after 16 polls from ARTS.
My question is, how can I make it ID when I want it to? I.E. I push some buttons and it sends out my CW ID. I know I won't be using ARTS at all, so that feature is completely useless to me. But according to the manual, it appears that the CWID is "glued" to ARTS.
Any thoughts?

Posting this for a friend of mine who wants to buy a transceiver,
either the Alinco DX70 or the Icom IC706.

Has anyone here had any experiences with these, especially with
possible modifications and TX/RX range? Any comparisons possible?

Replies may be (much) more detailed than my questions! I will hand
them over to my friend, he will be fine with all the technical stuff.

thanks

Message-ID: <32ADC954.7EF8@tr.unisys.com>
Source record: 188943

I have an ICOM IC-706 and want to install it on board my 30' sailboat. Instead of installing a ground plate, can I run the chassis ground from the radio to the YANMAR diesel engine to provide safety from shock? What are the pros & cons of such an arrangement? My Marine VHF radio is "grounded" through the + & - 12VDC. So it's confusing when I hear I need to have a separate ground plate to connect my radio's chassis ground. I currently have a no-code license, studying for my General license in preparation for cruising in southern waters. All responses appreciated. Thanks in advance.

The Yaesu FT 790 works very well at 9k6 baud but you do need to do a small modification to the G3RUH modem. I can supply details if you want them.

>You aren't gonna like it, but I was very pleased with my experience
>with ALINCO. I have an old DJ-160. Well, I basically screwed the

I was working with Alinco over some problems on my DX70 and also an DJ 580 that had had a difficult life. Initially I wasn't getting a lot of help from them. Then they changed service managers about 6 months ago and it was like someone turned the light on over there. They took care of most of the stuff right away. If you haven't dealt with the service department in the last 6 months or so, I think you're working with old data. They did a top notch job on my DJ580 and fixed all the fixable problems with the DX70. (the noise blanker is useless, the squelch poor, and no 500 hz cw filter - but those are design/marketing problems, not service problems)

YMMV

Kevin

Source record: 188953

I recently got a report on the air that there was a trace of carrier on my LSB signal. Looking at the owners manual I discovered the location of the carrier suppression pots and proceeded to reluctantly open the radio for the first time (out of warranty). These pots are R191 and R193. Stupidly relying on the photo in the manual I slightly tweaked one pot and got no improvement. Looking closely at the board I realized the the manual is in error and I actually tweaked R195. The photo in the owners manual is to the right one pot. I was able to knull the carrier in LSB but I need to find out what R195 is for and the proceedure for setting it back. I also would like the accepted Icom proceedure for R191 and R193 if anyone has a service manual.

Thanks de Gary W8PU

This sort of problem is typically caused by mistuning of the antenna
RF coil. Putting you hand near or on the aerial adds capacitance,
and brings the resonant circuit into tune.

Sounds like you need to tweek up the trimmer capacitor for that coil
and band.

John, I've seen a few in a magazine called Damark, but the one I finally purchased is from Heartland America (another product clearance house like Damark). It measures 8.5" wide, 5.5" deep, and 9.5" tall (about a fourth of that height is the handle). It's got two 12VDC cigarette type plugs on the front, and two terminal posts in the back (the unit also came with some mini-jumper cable type cables for the posts). It also came with an AC adapter/charger, and a cigarette lighter cable for charging from the car. It has a power meter in the middle and seperate on/off switches for each cigarette outlet on the front. Delivers 8amps/hour. Runs my 25watt mobile for days, and my cellular phone even longer. $49.95 Heartland America 1-800-229-2901

regards,
Gary

Greetings All!
Does anyone know if the following exists and if so, where I might find it?
I'm looking for a software package that will allow a desktop computer act as a repeater controller. Ideally, the software will support a sound card to provide IDs (both voice and CW), voicemail and other functions similar to the RC-850's DVR.
I see little reason why a modern computer could not provide nearly all the functions of the very best controllers currently available at a fraction of the cost.
Thoughts anyone? Thanks!

Ron (N9QYQ)

FWIW, I may try to "roll my own" but would hate to reinvent the wheel considering my programming skills are not up to date.

> Thanks de Gary W8PU

R 195 is in the AM modulation setting adjustment (Along with R499 and
R271) Proper adjustment of R191 and R193 requires the use of a spectrum
analtzer or a scope tap sensitive enough to see the carrier
bleedthrough. Then the pots are adjusted for minimum carrier alternately
in LSB and USB while transmitting with the mike disconnected. Try for
the lowest level on the average between LSB and USB. One or the other
will null better but it ruins the opposite sideband so go for the best
average.

4465. IC-735 Chirp

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-10 00:00:00 UTC
From: Al Waschka <awaschka@palmnet.net>
Message-ID: <32AE2607.73B1@palmnet.net>
Source record: 188965

I am chasing a problem with my Icom IC-735. Operating CW in full breakin split, it chirps. On semi-breakin, only the first character chirps. I have isolated the problem to the main synthesizer loop which is not supposed to be getting its divider changed, but gets mixed with the sub-loop (fine loop) and is supposed to track it. The fine loop is not chirping, but the coarse loop is. I have checked the beta of the charge pump and loop filter transistors and replaced the phase detector. I did an alignment, all of which has not helped at all. It does this on all bands, so the VCO shouldn't be the problem.

Has anyone run into this problem? Any ideas?

Thanks in advance

Al, K5TAN

I think a Motorola Spectra or Syntor just might do the trick. It has
three features: it receives, it transmits, and it scans, and it does
each of these very well, unlike most of the amateur stuff sold today.
What more do you need?

Hi Jason, I have the TR-9000, It is called an 'all mode' but it isn't. It only has FM, USB, LSB and CW. No
AM.

but it's a nice rig!

Hi. I just got a great deal on a Standard C112 2M FM rig.

But it only covers the 144-146 MHz band!

Maybe I missed it in the manual, but is there a way to change it to
the 144-148 MHz promised on the spec page???

Tnx es 73,
-Pete

>handle one side at a time, but I've never even seen one of these rigs.
>Anybody?

I haven't built the 440 rig, but I did build the 2m rig. The modulation is just summed into the PLL error loop, and if you've been following the 9600 baud threads, you know that's not going to work correctly.

The radio sweeps the VCO to the various receive and transmit offsets by mixing offset reference crystal oscillators with a sample of the VCO in the PLL mixer and feeding that to the PLL chip to generate the loop error voltage to steer the VCO to the proper frequency. You can't use it duplex or split it.

The 2m radio had a *number* of design flaws (I can't claim the inability to do 9600 properly is a design flaw since most other synthesized radios share it, and it doesn't affect ordinary voice use). But for example, it will transmit with the PLL out of lock, a definite no-no. And receive sensitivity was much worse than specified unless modified from the way the instructions tell you to build it. And the PA would go spurious if you tuned it according to the instructions in the manual (you can tune it clean with the aid of a spectrum analyzer, though you might have to settle for about 3 watts out). There were a number of fixes to its various problems which were posted here when it first came out.

I understand that the design has been revised since the first release. I can't say if any or all of the problems noted in the first units

have been resolved because I haven't seen one of the new units. But unless they have been, you don't want this radio except as a learning experience on how *not* to design a radio. There were also problems with component quality. The first radios were sent out with reference crystals which would not net onto frequency. You had to modify the reference oscillators to get them on frequency. Now some of this may be attributed to teething problems of a new product, but most of it is just typical Ramsey.

If you want a transmitter and receiver you can build from kits which will work for 9600 baud, buy the Hamtronics kits. Their quality isn't wonderful either, but at least the design is sound, and they will usually work as advertised after a bit of debugging.

What you say is true but just to nitpick. "forward bias" is a term
associated with solid state devices. With tubes there is no "forward
bias". All tubes are biased negative. Class A is biased at the
mid-point of the EGIP curve. Class C is biased at 1 1/2 to 4 times
cutoff. AB1 is generally biased in the "knee" portion of the EGIP
curve (at the beginning of the linear portion of the curve.)
AB2 is biased a little higher and is therefore more linear as you
said.

The difference is in the amount of forward bias on the output
devices.

More forward bias (higher standing current) will (in general)
improve linearity.

Philip

4481. Re: Heil microphone w/ICOM 706

Newsgroup: rec.radio.amateur.equipment

From: Dave Burr <dtburr@mcs.com>
Message-ID: <32AF3B24.303E@mcs.com>
Source record: 188840

I think you're right about the lack of gain using a Heil mike. It is not simply a matter of rigging a "keying circuit" as some have suggested. Heil is very backwoods in terms of support (small-town, unsophisticated company, desperately in need of marketing talent) and you'll be lucky to get much help. One thing I've done (no fun) is to put small pot in parallel with the bias resistor on the mike preamp transistor. You will undoubtedly be dealing w/ surface mount components so watch it. I did this in an IC-737 so I could use a Heil mike. ICOM tech support will probably tell you exactly which resistor this is if you can't find it on the schematic.

Epilogue: After happily owning ICOM equipment for many years, including the bad IC-730, *GREAT* IC-740, and so-so IC-737, I switched back to Kenwood so I could be LOUD on SSB again. If I were doing mobile work, it would be a different story. The '706 is an intriguing rig (although you'll sound like crap anyway being mobile so why worry about a Heil mike?)

> comparative tests? Thanks for your help.

I used to have a "German One" (Fritzel) for about 6 months. It worked somehow (with elevated radials about 10' high over the VERY good Dallas soil) -- 130 DXCC countries [>100 on 40] since July. About a month ago 20 meter trap partly melted, and on the second day of CQ WW CW water find its way to the connector at the feedpoint, and the connector blew up. (I used only about 1300-1400W -- SB-220). So now I am working on Butternut. The first day I installed it, the capacitor in the 80 meter
tank blew up. Nice guys from Butternut promised to send me a replacement (hopefully it will arrive by Friday, so I will play with my antenna over the weekend). They say, that something must be wrong, because usually their antennas easily handle 1500 + W.

BTW, question to everyone who have Butternuts -- is it possible to tune it, say, for 3,800, and then use on 3,500 with a tuner, (where the SWR is about 10... but so what?) without the risk to blow up some part of the antenna?

Several years ago I melted 80 meter coil on my Hy-Gain DX-77... It was tuned at 3520. On 3590 SWR was over 3. Just 600 W melted the coil after "only" 3 minute non-stop CQ on RTTY. You ask me -- what an idiot transmitts CQ for 3 minutes? Here I am. It was the very end of WAE RTTY, I worked virtually everyone, so I was tired to switch it on and off.... Anyway, I do not use RTTY since than (1991)... so far.

Bottom line: all verticals are about the same. If you plan to use QRP (up to 200 WTTS, I say) -- pick the one you like. For legal limit power try to choose one without traps (however, Cushcraft seems to be quite reliable, if you do not try to transmit far from tuned frequency).

As for the no radials --- I am trying to use Butternut with their CPK kit (radial substitutor). I know that it will degrade the performance significantly -- but just have no time to mess with the correct radial system. BTW, all those "half wave radiators" in the real life need grounding system (se ON4UN's book) to make

them perform. When you install them "as is" -- they definitely
radiate less than dissipate.

For sale..

Yaesu FT-50R Handheld, dual band transceiver. I would like to buy
a mobile; that's why I'm selling the HT. Works excellent, only a few
months old.

$300 including UPS 2-day shipping (in the US) once payment is received.

Includes: - 5 watt battery (FNB-41)
- manual, box, and warranty card
- wall charger (NC-60B)
- rubber duck
- Wide band receive (gets just about everything!)
- DC battery voltage display
- DC direct input capability (great in the car.)

Email me for more information or if you're interested!

Source record: 188843

Pete
If the radio, has a marking that looks like a triangle with a letter "J" inside, you are in for a lot of soldering. The recent Japanese domestic models, distinguished by the "J" mark are non-modifiable. Well only for expanded RX. The TX range can not be expanded without a CPU swap, perhaps that's why you got such a good deal. If you are lucky and the C-112 is a pre-"J" mark radio, a simple diode cut or relocation is usually sufficient to expand both tx and rx.

Good luck.

PEter
PS the "J" mark is usually on the outside of the packing carton and sometimes it is marked on the serial number plate, under the belt clip.

4493. RACAL 6790 Discussion?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-11 00:00:00 UTC
From: Ken <ken@notify1.com>
Message-ID: <32AF2D88.70A5@notify1.com>
Source record: 188852

Anyone interested in discussing the finer points of RACAL 6790 and 6790/GM receivers? I suddenly find myself in the business of owning and repairing a couple of them. The GM definitely had a bad first mixer and it looks like the 6790 may have suffered the same fate, along with a bevy of other problems. I've seen some advertised as "poor sensitivity" and now wonder if this is a weak point. Has anyone had any success opening the first mixer module and repairing it? Also, what was the optional front-end protection that is mentioned in the manual? I was thinking about placing a low-voltage gas tube (or neon lamp) across the antenna input and placing a 1.5V, 25mA lamp in series with the antenna input. I've seen this applied in various receiver designs over the years.

I would appreciate hearing of anyones experiences with building Ramsey kits. In partuicular, I am considering building the 2M FM tranciever for use as packet station. Please let me know if you have worked with this rig or have any other comments on the quality of Ramsey kits.
Thanks - Jerry

Kenwood had several older in the "600" and "700" series.

TS600, 620, 640 (quad band), 660, 670, 680 (TS130 + 6),
and 690 (TS450 + 6). These are all 6 meter (+)
transcievers

The TS700(A)(S) and (SP)
These were all 2 meter (only) all mode.

Our club has need for a schematic or manual for several repeaters we recently acquired. These units are retired US Forest Service VHF Units made by Motorola. They are reportedly 15 watts and are marked with model number SP3149902. We would be very grateful for any help that you might provide as our local radio techs are not familiar with these units. We will gladly pay for the costs associated with obtaining these materials. Thanks in advance for your help.

> robinf@sinesurf.co.nz

Hi Robin!

I own an Alinco DJ560 and my friend Darrell, (KA7BTV) owns a DJ580 es
hooking both up to the PK232 is the same, here's how I did it:

I placed a 680ohm resister in series with the PTT, then connected the
mic audio to the h/t end of the 680ohm resister.
I too had the same problem you mentioned, (tx overload), but after
analizing the circuit I discovered that it worked perfectly by placing a
.01 disc cap in series with the rec. audio coming out of the h/t.
Try it and let me know how it works, es I've been using it this way for
almost a year without any problems at all.

Body handling: Binary attachment payload not displayed: HFANT.GIF

I installed this HF multiband vertical at my QTH about 8 years ago, and it was about 8 years old (though new in the box) back then, and now I can't find the paperwork on the antenna. I put it up anticipating an upgrade to General eventually, but never found the time to upgrade, so it has gone without use all this time. It stands about 30 feet tall or so, and required radials for each band, in the configuration that I assembled it in. I seem to remember assembling it for CW use, but now wish to operate phone on 10M. Does anyone out there recognize it? Better yet, does anyone have a copy of the assembly instructions that I could obtain a copy of? I still have the additional two tubing segments required for phone use, which were never installed. Help!

An eyeballed GIF image is attached for your entertainment (hi-hi). >:)

Al Waschka wrote:
>
> I am chasing a problem with my Icom IC-735. Operating CW in full breakin
>...

Thanks to all who read and responded. There is a service bulletin and a mod for "early" 735 radios (mine was). The service bulletin is #13188-001, and adds two caps to the main board and changes three components on the PL board. I'll get the components tomorrow and let you know if it works.

The wierd thing is, no one told me I had a chirp for almost ten years! I thought I was chasing a failure and it was a bug. This with three years or more of field day full QSK operation. Oh well...

Thanks again and 73 -

Al, K5TAN

4505. Quick Money I promise!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-11 00:00:00 UTC
From: david naranjo <din9630@garnet.acns.fsu.edu>
Message-ID: <32AF97A8.1D62@garnet.acns.fsu.edu>
Source record: 188864

Quick Money I promise!!!

Get five pieces of paper and write the following on them..." PLease put me on your mailing list. You are # 4."

Get 5 one dollar bills and fold one in each piece of paper. Make sure you hide the bill as good as possible. Theives abound. Get five envelopes and address them to the following people:

1. Nancy Shain
Rt 3 Box 3396
Poplar Bluff MO 63901

2. Jerimiah Stuppy
467 Enders Rd
Halifax, Pa 17032

3. Dan Wood
1201 A Anderson ST
San Clemente, Ca 92672

4. S. Stapleton
6329 Hwy 135 N.
Lake City, Ar 72401

5. Y. Creed
1634 Roswell Dr
Tallahassee, FL 32310

How it works!!!

Ask someone how to post messages on your computer. Save or copy this message along with the addresses-except move #1 off the list move 2-3-4 and 5 up and put your name and address at number #5. Post this message in at least 200 news groups. THe more the more money you will make. ***Everything is legal as long as you record the names of the people who will be sending you $1 bills! By doing this you are creating a service. Making a mailing list at $1 a pop. Many people have made very good money off of this over a very short period of time.

If you are interested please try it. It costs only five dollars and five stamps and envelopes and that is it!!!

Remember the internet is constantly growing- so even the most minimal responses will you reap you a good profit!

Good luck and remember don't cheat. You won't make money if you do. OTHERS ARE WATCHING these postings. Mail the people on the list only $1

each-remove the first name-move the others up- put your name at the bottom of the list and you are in business.

GOOD LUCK

See if this info helps...

Heathkit parts:

It took me several phone calls and transfers to get a direct phone number
for Heathkit parts. Let me share this with you all.

Heath Order Desk
455 Riverview Dr
Benton Harbor MI 49022
616-925-5899

info de KA1CV

Asked recently if Heath was still providing 10-meter-modification
information for the SB-1000 linear amplifier, I did some research
via telephone and learned that technical consultation on Heath
products over 1 year old--that is, out of warranty--will cost you
$5 for the first 5 minutes and 75 cents per each additional
minute. "Have your VISA or MasterCard ready."

I got this by stepping through the telephone tree accessible
through Heath's "Technical Consultants" number (616-925-4914,
Mon-Fri 8A-4:30P ET). I got this number from the recent Heath
catalog with a cover sheet headlined "Heath Alive and Well--Shifts
Business Focus from Kits to Education." Other phone numbers and
info of possible use in that catalog include

"order by phone 24 hours a day" 1-800-253-0570 (Mon-Fri 8A-5P ET
to check on an order already placed)

"...by fax...." 1-616-925-4876

"...by mail" PO Box 8589, Benton Harbor MI 49023

"...through CompuServe..." "FREE CONNECT TIME for Heath shoppers.
Place your order right from your computer. Type GO HTH at any ! or
OK prompt for instant viewing of the Heath online catalog."

Customer service, Mon-Fri, 8A-5P ET 1-800-253-5700 "to check on an
order already placed or for answers to questions about returns and
exchanges"

Parts Replacement and Service Mon-Fri 8A-5P ET 1-800-253-0570
("please have the part number ready when you call. To inquire
about product service,, call 1-616-925-3273, Mon-Fri 8A-4:30P ET")

Catalog subscription: "To order a FREE Heath Catalog, 1-800-44-HEATH 24 hours day 7 days a week."

* * *

Bill Johnson, president of Heath Company, elsewhere on that cover sheet: "I think our kits are going to be missed out there and I know we're going to miss making and selling them. But there's a time for all things in this world, and the time for electronics kits is over--at least for now. But who knows? Maybe they'll come back--like rock 'n' roll or skinny ties."

The members and HQ staff would like to thank the following people for their contributions to this information file:

KA1CV
WJ1Z

Send any additional information or changes to mtracy@arrl.org.

73 from ARRL HQ.

I'll play around with it, but I believe as long as you have it in ARTS mode, it sends it every 5?? mins? I'll RTFM later. But I don't think you can "ID" on demand.. Wait.. Interesting idea: Set it up so it sends the ID (i.e. put it in ARTS mode, wait. Record the out put to a tape recorder then back to the radio into the Digital voice.. Idea.

4521. PENETRATER AMP

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-11 00:00:00 UTC
From: sullivan1@juno.COM
Message-ID: <19961211.001151.3302.1.SULLIVAN1@juno.com>
Source record: 188893

Hi,
I just received a hf amp that i need some info and help on. Perhaps someone out there can help me. The front panel is marked:

Penetrater
amateur bi-linear
HB-1000
base amplifier

There is a tag on the back with the markings:

AMC-OMM
730 west McNab road
FT.LAUDERDALE, FLORIDA

33309

SERIAL NUMBER 0302

This amp has a pre amp. The pre amp works ok but when the amp is excited shows no increase in output (into a dummy load). I was told when I received it that either the pre amp or amp didn't work. Not having a schematic or any info, I am having trouble trouble-shooting the problem.

If anyone has a schematic, info on trouble-shooting, general info on the amp, or can be of any help, I would be most appreciative.

I have a Standard model C966L Transceiver thats been converted to 6m.
I've been told that the unit employs a diode matrix system to set in
frequencies. I'm looking for someone, either private party or commercial
outfit, to set in new frequencies. If you know who I might contact,
please leave me a note here or email me direct.

thanks in advance

4525. Re: 2m 1kw ant. tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-11 00:00:00 UTC
From: moritz@ipers1.e-technik.uni-stuttgart.de
Message-ID: <58lti0$1e6k@info4.rus.uni-stuttgart.de>
Source record: 188897

>Can anyone recommend an antenna tuner/matching network for 144MHz which
>can run 1kw CW? Thanks.

Hello Michael,

On two meters generally tuners are not used. Instead the antenna
itself is designed so that it will present a defined impedance.
This makes sense for the simple reason that the antenna is mounted
high enough anyway to minimize effects of the surroundings on its
impedance. Especially if you want to run real power, good matching,
symmetry and decoupling from the surrounding is essential.

Good matching devices are e.g. 1/2 wave coax baluns (200 Ohms symmetric to
50 Ohms asymetric) sections of 75 Ohms line (100 Ohms to 50 Ohmy
asymetric).

If you mention the antenna you have in mind, it is possible to be more
specific.

I live in Asia and frequently go to Hong Kong, Japan, and Singapore...
I frequently visit the ham shops there too.

There is no DX-71. Alinco did introduce a radio back in mid 96
which is for commerical use only ... it is a "channelized" version
of the DX-70 (sans 6 meters) designed for ITU/Marine use and is
type accepted for such.

Source record: 188899

Andreas,

The FNB-4A 12v 500mA/H Nicad pack was still available from Yaesu Musen in Japan as of mid 96, so it may be worth checking with your "local" Yaesu distributor. The original FNB-3 and FNB-4 are no longer available, but the 4A was and is just a different colour (black insted of grey, from memory)

Hope this helps.

Chris,
VK2YUS.

The earlier ICOM Handmics like the HM-7 use a single ended amplifier with a single transistor 2SD661 as the amp. I would also suspect the amp from a D-104 stand will also work.

The following was donated to my children's school Ham club of which I am trustee, chief (and only) instructor.

Daiwa- LA 2180H VHF Amplifier 150 watts out 5 watt or 50 watt input (switch selectable) FM or SSB mode selector and Rx pre-amp. Unit works FB and is in excellent condition.

Heath- SB 303 Rcvr and SB-401 TX. Units have been refurbished and aligned. The 303 was professionally refurbished by Larry Tucker at Sandhills Technical Services in Candor, NC. (Cheap plug here as Larry is friend of school and club but, if you need first rate work contact Larry.) Both work FB with exception of 40 meter het. osc. crystal in transmitter however, it will transmitt FB using Rcvr LMO. Works FB independent or slaved with either controlling on all other bands. Both pieces are in excellent to mint condition with no mods (Transmitter had grounded AC power cable added but no chassis cutting or holes.) Includes full copy of both manuals in binders and all interconnecting cables.

Multi-Elmac- AF-67 Mobile transmitter. This is a classic AM mobile transmitter from the 50's or early 60's. Working condition is unknown but physical condition is good. It has a BNC connector on the RF output and what appears to be a place for a second one. The sides of the top cover have two holes drilled on each side for mounting. The former owner's calls are decaled or dry transfered on the front panel and sealed. No attempt has been made to remove them but, it looks like they could be easily. Working condition is not known as we have no power supply.

Have manual for AF-68 and although
similar is not a perfect match.

This equipment was donated by gracious hams some
of whom frequent this list and may recognize the
equipment. We thank them and hope that their
donations will further help young hams.

These is no cash involved here and none is
sought. We do not want money, we want equipment
the kids can use. We are looking for an HF trcvr
and/or 2 meter gear (older equipment (tubes ok!)
in good working and physical condition or newer
with a problem but repairable) but are open to any
and all offers(and donations for that matter)

Please feel free to repost this or portions of it
to other list and newsgroups. I do not have
newsgroup capability and actually hope you will
repost it.

Thanks in advance and look forward to hearing from
you.

Dan, KB1BG

>one I saw advertised a few months ago in QST. Are there any recent
>comparative tests? Thanks for your help.

I've been using a Butternut HF-6V vertical for about 12 years, and it was used when I bought it. I am very pleased with the performance (especially on 40m an 20m) and the very broad bandwidth on 40m and up.

I have it ground-mounted, and I'm not using radials (we are blessed with highly conductive soil here with a very high iron content). It's mounted on a six-foot steel T-post (the kind used to install barbed wire fences), which is pounded five feet into the ground. The antenna is attached to the T-post using U-clamps. In this installation, the antenna has easily survived the nasty winds of Texas thunderstorms and ice storms for the last 12 years. I have had to replace a few parts over the years, but I have no complaints about that (all antennas require periodic maintenance and repairs to keep them in top working order).

This is NOT an easy antenna to tune (expect to spend several hours on it) but the effort is well worth it. The job is much easier if you have access to an MFJ-249 VSWR Analyzer (every ham needs one of these anyway).

There is one on the market called the PCRC (PC Repeater Controller...what a novel name!)....BUT it is NO cheaper than any other controller...you do get voice mail and digital voice included....

they advertise in 73, CQ and Im not sure of QST...havent seen them there..
They are in NY state and I have some more info somewhere on them...they do have a dialup BBS at 516-286-1518 you can probably request info from.

BTW a PC is not a good idea since it is NOT made for certain RF applications and enviroments....a single board controller built for the conditions it must handle is better than a PC controller....and since a PC does just run off 12 Volts DC (well laptops can but not desktop styles without mod), thats causes a slight problem at a rptr site....the rest of the system can run off a battery...but the PC must use an UPS?

Collins updated their logo in the late 1960's and phased out the old
logo. I worked there during the tranistional period and saw equipment
made with both logos. The winged emblem was pretty much history
by late 1969. We nicknamed the new logo the "meatball"

For Sale a Kenwood TS-130SE that has about 1 (one) hour of use. I bought the radio from an estate sale that included a few other radios that had never been out of the box. I ran the radio two years ago for about an hour during a rain delay at the Indy 500. This is the cleanest TS-130SE you'll see. It has been stored in a cloth bag for the past two years. The radio has the second SSB filter installed, I put it in. and the hand microphone. The price is $550 firm, no trades. A cashiers check or US Postal M.O. I'll pay shipping anywhere in the Continential U.S. Worldwide shipment is negotiable.

Hi Raymond,

Check out The Raymond Sarrio CO. at:
http://www.sarrio.com/sarrio/rsfinal1.html

I also acquired an NC183-D recently and ordered a manual from the
gentleman at this site. I received a good bound copy with large
fold-out schematic and am happy with it. If memory serves me, I
paid $19 including shipping.

Good Luck with the radio!

Larry

KAWIN NEWS - Announcing KaWin 6.47

KaWin 6.47 is ready for download from the KaWin Home Page:

http://www.mutadv.com/kawin

Enhancements include:

Support for the Radio Amateur Callbook ("Flying Horse") Call Sign Database, including automatic lookup on connect.

Distance, heading to station and reciprocal heading from station is now included in the result of a call sign database lookup.

New "p" and "l" macros to insert your geographic position coordinates and locator grid.

Any macro may now be forced to uppercase.

A "Print Selection" command joins the Pop-Up menu.

The first edition of the KaWin "Frequently Asked Questions" (FAQ) is now a part of both the KaWin Help file and the KaWin Home Page. I am still compiling "Tips" for a separate topic and your contributions are needed. Input is solicited from tire-kickers as well as new and old registered users.

Please send all contributions to: stan@mutadv.com

The KaWin News mailing list has been purged of all problem email addresses. If your address was inadvertently removed please accept my apologies and re-subscribe. Please pay close attention to the email address you provide and/or the "reply to" address set in your email client.

To subscribe to the KaWin News mailing list, send email to stan@mutadv.com with the word SUBSCRIBE in the subject line, or use the handy subscription link on the KaWin Home Page. To be removed from the list, send email to stan@mutadv.com with the word UNSUBSCRIBE in the subject line and be sure to include the email address this message was sent to in the body. I cannot remove you if I don't know your address!

Message-ID: <58kv5p$d5u@queeg.apci.net>
Source record: 188970

R195 is part of the AM modulation adjustment.

Alignment instructions:
Freq at 14.100, mode AM, rf power at H, mic gain at 5; connect
oscilloscope to CP5; disconnect plug from J4 on main unit.
Adjust R195 for 200 millivolts p-p.

From IC-706 service manual.

Good luck.

Bill, N9HH

4558. IC706 carrier balance

Newsgroup: rec.radio.amateur.equipment

From: Bill N9HH <billnihh@apci.net>
Message-ID: <58kvdf$d5u@queeg.apci.net>
Source record: 188971

Connect sprectrum analyzer to ant port 1 thru suitable
attenuator; Freq 14.100, mode USB and LSB, no signal to mic
connector. Place in TX mode and adjust R191 and R193 repeatedly.

It doesn't say so, but I imagine if you have changed the ssb
carrier point it should be reset to zero before adjustment.

Good luck.

73,
Bill, N9HH

: for sale at a decent price.....

Rob and Eric, I bought an Icom IC-560 for around $250 last year; it was advertised on Packet. It's all-mode (less AM), puts out a useable 10 watts, and works well, although I wish it did not have a "volatile" memory & VFO. During the peak of E-season I worked several states with it, using a 6 meter Ringo Ranger slightly retuned for the lower end of the band.

I suggest trying either Packet or local swap nets, as the prices seem to be lower on VHF all-mode gear.

Hi Chuck-

I don't know what kind of "fancy antenna analyzer" you are referring to,
but I sure do know what you mean.

I have an MFJ 249 and find it quite handy for some antenna measurements,
but it has a couple of shortcomings.

A few months ago, I found out that it is useless for tuning up a long,
end-fed wire antenna on the low bands. Hooked that dude up to my 164'
inverted V (with the matching network between the analyzer and the
antenna, of course), and looked at the 80 meter DX window and couldn't
get the needle off the peg. No way, no how.

Put that thing back on the shelf and hooked up the trusty General Radio
1606A impedance bridge and tuned that antenna up easy as pie. Got quite
a fine null, and when I hit it with power, the SWR came up nearly
perfect.

I've since then tried it on several nights, and even in the daytime, and
apparently the signal from local AM bcst stations is what's doing it.
It is just useless on that antenna and that band.

The MFJ 249 has been very handy for higher band stuff, and with smaller
antennas, but it's never been any real use to me on 160 or 80.

And, as you mentioned, some of these analyzers don't tell you enough
info, even when they *do* work. Especially if you are going to custom
design a matching network or something like that.

> With a marine installation, you are not dealing with a computer system.

It's a common misconception, which *was* true in years past, but no longer. You are often dealing with MORE computer systems than on a car, depending on the application. Since many boats are equipped on the aftermarket, extreme caution has to be used to avoid interfering with not only engine control computers, but Radar, SSB, Loran, GPS, cellular, inverters, etc., and also to avoid interference caused by climte control systems and engine peripherals, which are often wired throughout the boat (again this depends on the specific application, dual controls, and so on). Not to mention that more expensive (read: larger) boats often have up to 10 different antennas handling various, sometimes interfering frequencies. This means meticulous isolation, which *can* be done without wiring directly to a battery.

> With a cell phone, you are dealing with 3 watts instead of 50 (and some
> computers react to cell phones.

Many electronics react to computers as well, especially sensitive navigational equipment in marine and aircraft.
3 Watts is only the power _output_ of the phone, and it can often be less than 3w. 0.5w can screw a computer. More power means it can do it from farther away, or be more pronounced. But the frequency is often what causes the interference, not the power of the unit in general. 800MHz is more likely to interfere with certain computer applications than is 140MHz. I don't know why this is, but it happens. I've had stereo equipment interfere with VHF transmissions, but VHF doesn't seem to affect cellular, but computers and lower-range VHF aren't usually a problem. The most important thing is to isolate the antenna well and use a power supply that isn't as subject to other RF pollution. Since I don't know the first thing about Oldsmobuicks, I wouldn't know which circuit this could be. Notice in the last post that I did say it was possible to either use a knock-out punch or drill the firewall to get to the battery. I just like to try easier applications before resorting to the most difficult. But I would definitely agree that if you want to be SURE that there is limited interference the first time, the battery itself is the best buffer.

4581. Cross band packet on Kenwood 733??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-12 00:00:00 UTC
From: Don Labriola <dplabriola@ccgate.dp.beckman.com>
Message-ID: <32B07B2E.7E46@ccgate.dp.beckman.com>
Source record: 188644
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Would anyone know of a setup mode or procedure to allow the Kenwood 733a to receive packet on one of the halves (UHF) and transmit on the other (VHF) via the packet connector. What I'm really doing is trying to use the packet connector to connect into an AEA radiolink controller for use as a remote, and the packet connector provides 1) a shielded audio input with PTT (the normal mic is hard to shield), 2) Audio out, and 3)Squelch detect (COR) output. I can get any two by other methods. The packet, as far as I can tell, will only direct the received audio from the side that is selected as transmit (PTT), not from the selected "control" channel.

Any suggestions or help is appreciated. (Please also E-mail - I don't always get to read all of the news groups before they go stale - our local news server tends to have a fairly short memory span!)

The instructions for cross band repeat can be found on the Kenwood web page

http://www.kenwood.net

They dont put the instructions for cross band repeat or wireless memory
programing (to a like rig) and wireless remote control

because many of those features are not leagle in certain cournties.

Go to the web bage and look for the tech notes.

Enjoy.

I concur...it looks like an 18 AVT/WB from the graphic, although your description is a little confusing. I don't know about extra sections for "phone" use.

Contact Telex/Hy-Gain. They are good about providing manuals free or for just a few bucks.

> Can someone explain to me what a "Panoramic Display" is?
>
> Thanks,
> Kory
> AC6RN

Kory,

Here's my pitiful attempt at a simplistic explanation:

You'd be looking at a display on a 'scope whose center would be equated with the frequency to which your receiver is currently tuned. The input would be coming from an IF in your receiver.

The display would show you several (perhaps 10's or 100's of) KHz above and below the center (your current freq).

Should another signal be present in your IF (at your antenna within the limit of the displayed frequency range) above or below your operating frequency, it will show up in the display as a spike whose vertical size would give you some indication of it's relative strength.

So in essence you can look above and below your current frequency and see where other signals may be and how close they are to your frequency. So if you wanna work'em, you tune your rig until that spike is centered and you should be on their freq. Or if you're looking for a relatively quiet part of the band you can see whether going up or down the band would be better by checking to see which direction is more or less crowded.

End of explanation. Hope it was understandable!

Hello Jerry,
I don't know about the Ramsey Kits, but Ten-Tec sell a great 2 meter FM transciever kit that already has the 5 PIN DIN connector on the PCB. The kit is very easy to build with easy to follow directions. Support if you should need it is great. I bought the kit for $195. The phone number for info is 432 453-7172. the model of the 2 meter kit is 1220. They also have a 220 Mhz and a 6 meter kit.

good luck

The computer system here shows that the old part number (NLN-5096D) now points to a manual number. This is usually a page of explanation as to why a part is no longer available. The price also went to zero on our computer system for the NLN-5096D. This is another clue to me that the part is NLA from Moto.
